RE: 1610 (301); Proposed Solar Energy Supplement to Draft PEIS//Programmatic Agreement for the National Solar Energy Program; and Comments and Recommended Tribal Government List

Dear Mr. Nedd and Mr. Fosberg:

The Native American Heritage Commission (NAHC), the State of California 'Trustee Agency' for the protection and preservation of Native American cultural resources pursuant to California Public Resources Code §21070 and affirmed by the Third Appellate Court in the case of EPIC v. Johnson (1985: 170 Cal App. 3rd 604). The court held that the NAHC has jurisdiction and special expertise, as a state agency, over affected Native American resources, impacted by proposed projects including archaeological, places of religious significance to Native Americans and burial sites. The NAHC wishes to comment on the proposed project.

This letter includes state and federal statutes relating to Native American historic properties of religious and cultural significance to American Indian tribes and interested Native American individuals as 'consulting parties' under both state and federal law. State law also addresses the freedom of Native American Religious Expression in Public Resources Code §5097.9.

Early consultation with Native American tribes in your area is the best way to avoid unanticipated discoveries of cultural resources or burial sites once a project is underway. Culturally affiliated tribes and individuals may have knowledge of the religious and cultural significance of the historic properties in the project area (e.g. APE). We strongly urge that you make contact with the list of Native American Contacts on the attached list of Native American contacts, to see if your proposed project might impact Native American cultural resources and to obtain their recommendations concerning the proposed project. Special reference is made to

the *Tribal Consultation* requirements of the California 2006 Senate Bill 1059: enabling legislation to the federal Energy Policy Act of 2005 (P.L. 109-58), mandates consultation with Native American tribes (both federally recognized and non federally recognized) where electrically transmission lines are proposed. This is codified in the California Public Resources Code, Chapter 4.3 and §25330 to Division 15.

Consultation with tribes and interested Native American consulting parties, on the NAHC list, should be conducted in compliance with the requirements of federal NEPA and Section 106 and 4(f) of federal NHPA (16 U.S.C. 470 *et seq.*), 36 CFR Part 800.3 (f) (2) & .5, the President's Council on Environmental Quality (CSQ, 42 U.S.C 4371 *et seq.* and NAGPRA (25 U.S.C. 3001-3013) as appropriate. The 1992 *Secretary of the Interiors Standards for the Treatment of Historic Properties* were revised so that they could be applied to all historic resource types included in the National Register of Historic Places and including cultural landscapes. Also, federal Executive Orders Nos. 11593 (preservation of cultural environment), 13175 (coordination & consultation) and 13007 (Sacred Sites) are helpful, supportive guides for Section 106 consultation. The aforementioned Secretary of the Interior's *Standards* include recommendations for all 'lead agencies' to consider the historic context of proposed projects and to "research" the cultural landscape that might include the 'area of potential effect.'

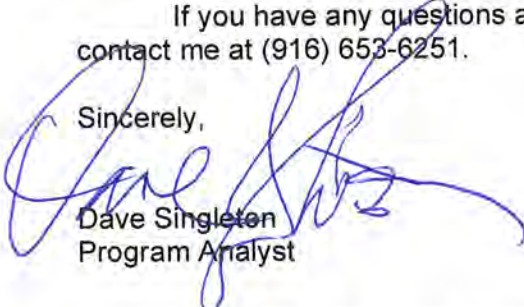

Confidentiality of "historic properties of religious and cultural significance" should also be considered as protected by California Government Code §6254(r) and may also be protected under Section 304 of he NHPA or at the Secretary of the Interior discretion if not eligible for listing on the National Register of Historic Places. The Secretary may also be advised by the federal Indian Religious Freedom Act (cf. 42 U.S.C., 1996) in issuing a decision on whether or not to disclose items of religious and/or cultural significance identified in or near the APEs and possibility threatened by proposed project activity.

Furthermore, Public Resources Code Section 5097.98, California Government Code §27491 and Health & Safety Code Section 7050.5 provide for provisions for accidentally discovered archeological resources during construction and mandate the processes to be followed in the event of an accidental discovery of any human remains in a project location other than a 'dedicated cemetery'.

To be effective, consultation on specific projects must be the result of an ongoing relationship between Native American tribes and lead agencies, project proponents and their contractors, in the opinion of the NAHC. Regarding tribal consultation, a relationship built around regular meetings and informal involvement with local tribes will lead to more qualitative consultation tribal input on specific projects.

If you have any questions about this response to your request, please do not hesitate to contact me at (916) 653-6251.

Sincerely,

Dave Singleton
Program Analyst

SUBJECT: COMMENTS INTO THE SUPPLEMENT TO DRAFT PROGRAMATIC ENVIRONMENTAL IMPACT STATEMENT FOR SOLAR ENERGY DEVELOPMENT, RE CALICO SOLAR PROJECT AT HECTOR, CA

Dear H. Hartmann, BLM District Manager and Ms. Vaccaro:

Inre the recently published draft programatic environmental impact statement for solar energy development, my below comments derive from my wholly unsuccessful attempt to point to unaddressed negative project impacts for the Calico Solar Project, to be sited on about 4,600 acres of federal land at Hector, California. Said project was approved by the BLM and California Energy Commission in late 2010.

My project concerns were made at local meetings and extensively, in writing, to the BLM and CEC, inre significant negative project impacts on private land adjacent to and near to the project site, north of the BNSF Railway tracks at Hector, California. My concerns were the unaddressed negative impacts on the 80 or so private land owners, re reduced motorized vehicle access, noise, dust, drainage and other health issues. All comments on these issues were completely ignored by the BLM and the CEC, without explanation. It was like a very bad dream.

Also ignored were the project impacts on the Newberry Springs Fire Department. Instead of fair play, the CEC directed that the applicant pay fire department impact fees to the County, which had the benefit of an attorney oversighting the process.

Everyone who had an attorney, it seems, got something out of the approval process, in the conditions of approval. ⁸⁰ Those parties without legal representation, the owners of the approximately private land parcels and the Newberry Springs Fire Department got "stiffed". The BLM and CEC failed them terribly.

It would seem that raw politics took precedence over the law. At a CEC hearing on November 10, 2009, Mr. Michael Picker, from the governor's office lectured the commissioners and the staff. He told them that he didn't want the process to be the source of failure. No rebuttals from anyone. And it was all downhill from there.

If a bridge is built at the Hector Road railroad crossing to access the project

October 31, 2011

Page 2

H. Hartmann, EVS

District Manager, BLM

Ms. Kourtney Vaccaro, Esquire

as presently proposed, that bridge, whether assisted with federal financing or not, needs to be open to the public. What rationale would dictate otherwise?

In the past thirty years I have read and made comments into many draft environmental impact statements and reports. I have never seen a more flagrant abuse of the environmental review process by a lead agency than in this instance.

Sincerely,

A handwritten signature in cursive script, appearing to read "Fred Stearn", written in black ink. The signature is fluid and extends across the width of the page.

Fred Stearn

Dear Ms. Stewart:

I am writing to provide comments on the Supplement to the Draft Solar Energy Programmatic Environmental Impact Statement.

Counties like mine in the West have a long relationship with the public lands. We have an historic opportunity to improve the way solar resources are developed on public lands. The long-term plan for solar energy development now being considered, the Supplement to the Draft Solar Programmatic Environmental Impact Statement (PEIS), will help shape future energy development and land use across the public lands of the west.

I applaud the BLM in responding to recommendations from the public to focus development in pre-screened, low-conflict zones. Overall, the Supplement is a step in the right direction, and most of the elements should be carried through the final plan. However, I believe the plan should provide additional incentives for building projects in low conflict zones and avoid development on public lands that are important for wildlife, recreation, tourism and other uses by County residents and visitors.

To ensure that solar development on public lands is smart from the start, I support most of the plan as laid out in the revised Preferred Alternative. I recommend that:

- The BLM should ensure that these large solar projects are built primarily in the pre-screened, low-conflict zones;
- The BLM should ensure that counties have a major role in designating future solar energy zones; and
- The BLM should provide a 60 day comment period on the final plan to allow public response to additional information in the final plan.

By focusing on low-conflict zones, the BLM can ensure that solar development avoids the conflicts and controversy that have plagued oil and gas development on public lands throughout the rural west. I urge you to take this common-sense approach that will allow solar development that is faster, cheaper and better for the environment, consumers and our western counties.

Thank you for considering my concerns.

Sincerely,

A handwritten signature in cursive script, appearing to read "Maggie Hart Stebbins".

Dear Mr. Nedd:

This letter is in response to the correspondence received in our office in which you provide the Ysleta del Sur Pueblo the opportunity to comment on the Bureau of Land Management's (BLM) government to government consultation regarding the establishment of a national solar energy program.

While we do not have any comments on the Supplement to the Draft Solar Programmatic Environmental Impact Statement (PEIS) and believe that these proposed undertakings will not adversely affect traditional, religious or culturally significant sites of our Pueblo and have no opposition to it; we would like to request consultation should any human remains or artifacts unearthed within the state of New Mexico during these projects be determined to fall under the Native American Graves Protection and Repatriation Act (NAGPRA) guidelines. Copies of our Pueblo's Cultural Affiliation Position Paper and Consultation Policy are available upon request.

Thank you for allowing us the opportunity to comment on the proposed projects.

Sincerely,

Javier Loera

War captain/Tribal Historic and Preservation Officer

PETITION TO PROTECT AMERICA'S WILD HORSES AND BURROS

**Mr. Bob Abbey
Director, Bureau of Land Management:**

©Fotolia.com

Dear Mr. Abbey:

As a taxpaying American and an advocate for the humane treatment of animals, I fully support the common-sense report recently submitted to you by the Doris Day Animal League and other animal welfare organizations that outlined necessary changes in the Bureau of Land Management's (BLM) wild horse and burro gather operations.

Last year, 17 wild horses needlessly died during the BLM's summer roundups. These guidelines for change could have prevented such senseless deaths:

- Stop the wild horse roundups in extreme temperatures.
- Provide "real-time" cameras on the helicopters and holding pens where these vulnerable animals are kept.
- Continue to implement vital contraception in order to eliminate the need for future roundups.

Our government needs to implement these recommendations immediately to ensure our wild mustangs and burros are protected and treated with the dignity they deserve, as well as saving the taxpayers thousands of dollars. Thank you for your consideration of my comments.

Respectfully, Elmer R. Watts 12.12.11 Please do all you can to protect our wonderful wild mustangs - Burros.

Solar Energy Draft PEIS
Argonne National Laboratory
9700 S. Cass Ave. – EVS/240
Argonne, IL 60439

Dear Ms. Stewart,

On behalf of Cochise County, I thank you for the opportunity to provide comments on the Supplement to the Draft Solar Energy Programmatic Environmental Impact Statement (PEIS), the long-term plan and suitability analysis for large-scale solar energy development on public lands in the Southwest.

Like many communities in the Southwest, public lands are deeply woven into the socioeconomic fabric of Cochise County. The BLM's effort to evaluate public lands for optimal large-scale solar development sites represents an attentive and responsible approach, and is a welcomed opportunity to provide meaningful local input on national energy policy. On a regional level, large land allocations in Arizona directed at solar development will help advance the State's minimum renewable energy standard (REST) goal of 15% energy production by 2025. However, perhaps more importantly, this effort serves as a remarkable opportunity to enhance and galvanize a long-term positive working relationship with the BLM based on coordination, cooperation and the spirit of partnership.

We support much of the plan as proposed in the revised Preferred Alternative. And in light of the proposed SunZia Transmission (500kV) and Southline Transmission projects (345kV), both of which would cross Cochise County and are in proximity to expansive BLM lands, we support large-scale solar development in those areas.

As added assurance that solar development on public lands within Cochise County occurs in a conscientious manner, the BLM must:

- Provide ample and reasonable opportunities for Cochise County and the public to review proposed solar energy zones and provide comments on the final plan.
- Ensure that large-scale solar energy projects are directed to public lands within Cochise County that reflect the low-conflict approach of the revised Preferred Alternative.

Increasing renewable energy production is a major public policy decision. At the heart of this question is not simply the issue of citing utility-scale solar energy facilities, but also how the BLM should promote and incentivize solar energy production. Therefore:

- A comprehensive analysis comparing energy production potential, land requirements, and environmental and socioeconomic impacts of utility-scale power generation should be undertaken. This is recommended so that the BLM, local governments and the public will be better equipped to make critical decisions regarding how and if large-scale solar projects should be incentivized in order to help minimize solar projects on public lands that hold significant recreational, tourism and wildlife value.

Broadly speaking, solar development has few negative socioeconomic impacts. However, there is the potential for unreasonable negative impacts for Cochise County residents living in proximity to large-scale solar developments. For example, it may be necessary for construction vehicles to pass through communities to access project sites, thereby increasing local traffic and transient dust. Solar developments may also affect a community's viewshed, which may compromise quality of life. Although communities in proximity to large-scale solar development typically incur the most impact, currently, a compensation program for residents or communities impacted by solar development does not exist. We recommend that the BLM develop a funding program whereby a portion of solar development lease payments are distributed among affected communities to, for example, augment funding for public services.

Furthermore, in the long-term, we identify the need for a comprehensive and strategic landscape level plan that addresses large-scale solar development -- one that is coordinated with local agencies and addresses *private and public lands*. This will strengthen opportunity for both the County and the federal government to work together in a coordinated and effective way that will set the stage for a more comprehensive process.

Finally, our recommendation for a higher level of intergovernmental coordination and collaboration regarding any portions of any solar energy projects proposed in the County would provide us with more meaningful NEPA input, and would assure consistency with the County's Comprehensive Land Use Plan (and any other duly adopted land use or transportation plans).

Thank you for the opportunity to provide comments and for considering our recommendations. We also thank you for supporting a working environment based upon coordination, cooperation, partnership, and open dialogue.

Sincerely,

Richard R. Searle, Chairman
Cochise County Board of Supervisors

Department of Defense
Supplement to the Draft Solar Energy Development PEIS
23 JAN 2012**

1. Combined DoD Comments to Supplement to the Draft Solar Energy Development PEIS.
2. Attached maps of Vinagre Wash Complex Area

EIS Chap	Page/Line	Comment/Suggested Revision	Action (for use by ANL)
		GENERAL COMMENTS	
		<p>General statement: Mention of military consultation on new developments outside of the identified SEZs is minimal with very little description or guidance. Military consultation is vital. In Section D.5, lines 32-36, page D-7 and line 3, page D-8 only mentions Military and Civilian Aviation as a “.....guide to inform the analysis of SEZs.” I don’t believe the military is specifically mentioned anywhere else in the document, except to presumably include it in “federal.....government agencies”. Perhaps military concerns of economic impact and/or military mission could be added to “Section D.3.3 Additional Locally Relevant Screening Criteria” or somewhere else that would be relevant in the document.</p>	
		<p>Section C.5.1.1, line 14, page C-239. 2010 census has the population of Las Cruces at 97,618. This might be a better number to use.</p>	
		<p>Section C.5.1.5.9, line 36-37, page C-247. “Identify and map the location of all yucca, agave, and ocotillo cacti and other succulent plant species. I’m thinking this is an impossible task unless it is confined to a small area or changed in some way.</p>	
		<p>MCIWEST G-3 (RTAM) Comment to be added to Supplement to Draft Solar PEIS: The U.S. Marine Corps needs continued access to non-DOD lands for non-live fire Marine Air-Ground Task Force (MAGTF) military readiness training in the Mojave Desert. This enduring need for access to non-DOD lands in the Mojave Desert is variable but highly essential for mission rehearsals and readiness training in support of the national defense. Military training and readiness activities have historically been conducted in the Mojave Desert since 1940, then known as the California-Arizona Maneuver Area, or CAMA. As recently as 2000-2003, the U.S. Marine Corps conducted mission rehearsal maneuvers in the Mojave Desert in preparation for OPERATION IRAQI FREEDOM I. The Riverside East SEZ overlays a significant portion of this area that is highly valued for its enduring training value. Appropriate notifications, disclosures, entitlements, master planning documents, and project specific conditions of approval should incorporate provisions to preserve and retain military training accessibility and military force transit around, through, and over the Riverside East SEZ to preserve the enduring but variable need for military training activities within this area that are essential for national defense purposes.</p>	

	ALTERNATIVE OR VARIANCE AREA COMMENT Vinagre Wash Complex	
	<p>DoD requests that you exclude the Vinagre Wash Complex from any proposed Alternative or Variance Area identification. This exclusion will do two things: 1) protect Naval Special Warfare limited tactical training within the Vinagre Wash Complex, and 2) provide consistency with Senator Feinstein's proposed Wilderness Bill which specifically defined this area as a "Special Management Area" to protect these operations.</p> <p>Naval Special Warfare (SEALS) conduct live-fire desert warfare and ground mobility training on the Marine Corps' Chocolate Mountain Aerial Gunnery Range (CMAGR) which is adjacent to the Vinagre Wash Complex Wilderness Proposals. Naval Special Warfare units use various ground mobility platforms, such as High Mobility Multi-Purpose Wheeled Vehicle (HMMWVs) and Mine Resistance Armor Protected Vehicles (MRAPs), on the battlefield. Realistic training using ground mobility assets is essential for Naval Special Warfare to prepare for combat, with limited training portions conducted in the Vinagre Wash Complex. Also of concern is the impact these potential designations will have on our use of special use airspace associated with the CMAGR. A portion of the Vinagre Wash Complex is beneath Abel North Military Operating Area, which is one of the most heavily used aviation training areas in the Southwest. Refer to the attached two maps showing the area in detail.</p>

1		INTRODUCTION	
Chapter 1.3	Pg 1-4 <i>Line 39</i>	Add to existing comments: “Nellis AFB supports the BLM’s Modified SEZ Program Alternative which limits development to designated SEZs. The PEIS outlines a clear process for identifying additional solar energy zones at the state/local level if/when they are required. This method provides a collaborative avenue to establish additional land with a high probability of success.”	
2		BLM ALTERNATIVES	
Chapter 2.2.1.3	Page 2-14 <i>Line 16</i>	Add to existing table in Appendix A, Section A.2.2 of the Draft Solar PEIS: “-- Wireless Systems/Electrical Frequency Assessment, Mitigation and Monitoring Plan -- Security (or Security System) Plan -- Heat Emissions Assessment, Mitigation and Monitoring Plan -- Other Military Operations Compatibility Assessment, Mitigation and Monitoring Plan”	
Chapter 2.2	Page 2-15 <i>Line 12</i>	Add to existing comments: “Due to the significant adverse impacts to military test and training operations, DoD requests the following areas be designated as exclusion zones: 1) Remaining Dry Lake SEZ acreage 2) Remove all acreage at Upper Dry Lake SEZ and make the area an exclusion zone 3) Delamar Valley SEZ acreage	
Chapter 2.2	Pages 2-16 – 2-17 <i>Table 2.2-1</i>	Add to existing table: “-- Areas where solar energy development proposals are assessed by the DoD and partner agencies as having significant adverse impacts	

		to military operations.”	
Chapter 2.2	Page 2-16 <i>Table 2.2-1 Item #9</i>	Add to existing comments: “DoD supports the BLM’s goal to provide the highest probability of success for development in designated SEZs. To that end, recommend the restrictions requested by DoD for the remaining NV sites be added prior to publishing the final SEZ-specific design features.”	
Chapter 2.2	Page 2-17 <i>Table 2.2-1 Item #26</i>	Add to existing comments: “DoD continues to request the Dry Lake Valley North site be completely removed from consideration as a SEZ. Request the site be designated as an exclusion zone, to include the area removed from SEZ consideration.”	
Chapter 2.3	Page 2-53 <i>Table 2.3-2</i>	Add to existing table (Military and Civilian Aviation row): -- (Modified Program Alternative column) “Development of solar energy facilities and associated infrastructure in specific areas would result in significant impacts to military operations, potentially degrading testing and training operations supporting the national security mission. Military and civilian aviation impacts would be identified and adequately mitigated prior to BLM’s issuance of a ROW authorization.”	
Chapter 2.3.1	Page 2-62 <i>Line 15</i>	Add to existing comments: “Nevada RE Goals (per Energy Policy Act of 2005 and Secretarial Order 3285A1) can be met without designating the Dry Lake North location as a BLM SEZ.”	
Chapter 2.3.2.7	Page 2-75 <i>Line 46</i>	Add to existing comments after “analyses can be completed.”: “DoD supports the BLM’s goal to provide the highest probability of success for development in designated SEZs. To that end, recommend the restrictions identified by DoD for the remaining NV sites be added prior to publishing the final SEZ-specific design features.”	
3		DOE Land Use Rules	
Chapter 3.2.3	Page 3-3 <i>Line 18</i>	Add to existing comments: “Consult with DoD to avoid and/or mitigate impacts to military test and	

		training operations.”	
App. B		Delamar Valley (Removed as SEZ)	
B.3.1.3	Page B-20 <i>Line 16</i>	Add to existing comments: “DoD supports the decision to remove this site as a SEZ. Due to the significant adverse impacts to military operations identified by DoD throughout the PEIS process, request this site be identified as an exclusion area if the currently-preferred BLM alternative is chosen. “	
App. B		East Mormon Mountain (Removed as SEZ)	
B.3.2.3	Page B-26 <i>Line 17</i>	Add to existing comments: “Should this area be considered for a variance at a future date, the previous DoD comments on technology and height are still applicable.”	
App. C		Action Plans for Remaining SEZs	
C.4.1		Amargosa Valley	
C.4.1.1	Page C-149 <i>Line 5</i>	Add to existing comments: “MTR airspace is authorized by the FAA and utilized by DoD aircraft from the surface to 9,400 feet mean sea level (MSL). The proposed SEZ development site encompasses the entire route. Additionally, glare and heat emissions produced by certain types of technology may present both flight and ground safety concerns. For these reasons, DoD requests the technology at this site be restricted to low-profile, low-glare PV technologies under 50 ft AGL similar to the PV I Array at Nellis AFB.”	
C.4.1.1	Page C-150 <i>Line 14</i>	Add to existing comments: “Light from certain solar technologies would impact DoD nighttime operations. For these reasons, DoD requests the technology at this site be restricted to low-profile, low-glare PV technologies under 50 ft AGL similar to the PV I Array at Nellis AFB.”	
C.4.1.2	Page C-151	Add to existing comments:	

	<i>Line 14</i>	“MTR airspace is authorized by the FAA and utilized by DoD aircraft from the surface to 9,400 feet mean sea level (MSL). The proposed SEZ development encompasses the entire route. For these reasons, DoD requests the technology at this site be restricted to low-profile, low-glare PV technologies under 50 ft AGL similar to the PV I Array at Nellis AFB.”	
C.4.1.5.5	Page C-153 <i>Lines 40-44</i>	The current comments indicate technology restrictions identified in Section C.4.1.3 will mitigate DoD’s concerns. However, Section C.4.1.5.5 currently only addresses glint/glare concerns for National Park and Wilderness purposes, and does not address DoD’s concerns. Recommend DoD concerns be addressed as outlined in Sections C.4.1.1 and C.4.1.2 above. If the DoD-proposed low-glare, low-profile technology restrictions are adopted by the BLM, the glint/glare concerns should be resolved for all three agencies.	
C.4.1.5.12	Page C-162 <i>Line 25</i>	Revise existing comments to read: “Several approved, highly-utilized military training routes (MTRs) exist in airspace directly above the SEZ. Noise levels may be impacted by routine military flight operations occurring in military training routes (MTRs) located directly above and proximal to the SEZ.”	
C.4.2		Dry Lake	
C.4.2.1	Page C-168 <i>Line 2</i>	Add to existing comments: “As identified throughout this process, the DoD has expressed continued concern for solar energy facilities that might affect Nellis AFB approach and departure operations, the emergency bailout and emergency procedures area, and potential impacts on the test and training mission at the NTTR. Maintaining an open, unpopulated area close to the Nellis Air Force Base runways for controlled bailout purposes is critical to the safety of military pilots and the community. For these reasons, DoD requests the technology at the remaining SEZ site be restricted to low-profile, low-glare PV technologies under	

		50 ft AGL similar to the PV I Array at Nellis AFB. In addition, the area removed from the original Dry Lake SEZ should be designated as an exclusion zone, should the BLM proceed with the current preferred alternative. “	
C.4.2.1	Page C-169 <i>Line 16</i>	Add to existing comments: “Light from certain solar technologies would impact DoD nighttime operations. For these reasons, DoD requests the technology at this site be restricted to low-profile, low-glare PV technologies under 50 ft AGL similar to the PV I Array at Nellis AFB.”	
C.4.2.3	Page C-171 <i>Line 8</i>	Add to existing comments: “Due to the significant DoD concerns outlined throughout this process, request the acreage removed from the original Dry Lake SEZ be designated as an exclusion zone (should the BLM proceed with the current preferred alternative).”	
C.4.2.5.12	Page C-184 <i>Line 3</i>	Revise existing comments to read: “Several approved, highly-utilized military training routes (MTRs) exist in airspace directly above the SEZ. Noise levels may be impacted by routine military flight operations occurring in military training routes (MTRs) located directly above and proximal to the SEZ.”	

C.4.3		Dry Lake Valley North	
C.4.3.1	Pg C-189 <i>Line 11</i>	Add to existing comments: “Due to the significant adverse impacts at this location, the DoD continues to request the Upper Dry Lake site be completely removed as a SEZ. In addition, the site (original and remaining) should be identified as an exclusion area (should the BLM proceed with the current preferred alternative). Nevada RE Goals (per Energy Policy Act of 2005 and Secretarial Order 3285A1) can be met without designating the Dry Lake North location as a BLM SEZ.”	
C.4.3.1	Pg C-190 <i>Line 20</i>	Add to existing comments: “Light from certain solar technologies would impact DoD nighttime operations. For these reasons, DoD requests the technology at this site be restricted to low-profile, low-glare PV technologies under 50 ft	

		AGL similar to the PV I Array at Nellis AFB.”	
C.4.3.5.12	Page C-202 <i>Line 15</i>	Revise existing comments to read: “Military training routes (MTRs) and operating areas authorized for supersonic flight by the FAA at and above 5,000 ft AGL exist directly above the SEZ. Noise and associated overpressures created by authorized supersonic flight above and proximal to the SEZ may adversely affect solar technology and/or infrastructure. As a result of the significant adverse impacts at this location, DoD continues to request the Upper Dry Lake site be completely removed as a SEZ. In addition, the site (original and remaining acreage) should be identified as an exclusion area if the currently-preferred BLM alternative is chosen. Nevada RE Goals (per Energy Policy Act of 2005 and Secretarial Order 3285A1) can be met without designating the Dry Lake North location as a BLM SEZ.”	

C.4.4		Gold Point SEZ	
C.4.4.1	Page C-204 <i>Line 30</i>	Add to existing comments: “Light from certain solar technologies would also impact DoD nighttime operations. For these reasons, DoD requests the technology at this site be restricted to low-profile, low-glare PV technologies under 50 ft AGL similar to the PV I Array at Nellis AFB.”	
C.4.4.1	Page C-204 <i>Line 39</i>	Add to existing comments: “As identified throughout this process, the DoD has expressed continued concern for solar energy facilities that might affect military test and training operations. For these reasons, DoD requests the technology at this site be restricted to low-profile, low-glare PV technologies under 50 ft AGL similar to the PV I Array at Nellis AFB.”	
C.4.4.5.12	Page C-218 <i>Line 3</i>	Revise existing comments to read: “Several approved, highly-utilized military training routes (MTRs) exist in airspace directly above the SEZ. Noise levels may be impacted by routine military flight operations occurring in military training routes (MTRs) located directly above and proximal to the SEZ.”	

C.4.5		Millers SEZ	
C.4.5.1	Page C-222 <i>Line 38</i>	Add to existing comments: “As identified throughout this process, the DoD has expressed continued concern for solar energy facilities that might affect military test and training operations. For these reasons, DoD requests the technology at this site be restricted to low-profile, low-glare PV technologies under 50 ft AGL similar to the PV I Array at Nellis AFB.”	
C.4.5.1	Page C-224 <i>Line 41</i>	Add to existing comments: “Light from certain solar technologies would impact DoD nighttime operations. For these reasons, DoD requests the technology at this site be restricted to low-profile, low-glare PV technologies under 50 ft AGL similar to the PV I Array at Nellis AFB.”	
C.4.5.2	Page C-225 <i>Line 15</i>	Add to existing comments: “For these reasons, DoD requests the technology at this site be restricted to low-profile, low-glare PV technologies under 50 ft AGL similar to the PV I Array at Nellis AFB.”	
C.4.5.5.12	Page C-235 <i>Line 23</i>	Revise existing comments to read: “Several approved, highly-utilized military training routes (MTRs) exist in airspace directly above the SEZ. Noise levels may be impacted by routine military flight operations occurring in military training routes (MTRs) located directly above and proximal to the SEZ.”

4 March, 2009,2010, 1Jan, April 23, 4June, 7Sept, 22Oct, 2011

Whitehouse, 1600 Pennsylvania Ave. Washington, DC 20500
Charles Schumer 322 Hart Senate Office Building Washington D.C. 20510
Mike Lee 316 Hart Senate Office Building Washington, D.C. 20510

I grew up in Honolulu, Hawaii. Left in 1982 for California after Univ. of Hawaii. Here are some books for your family, staff and employees. I'm cheering for your "economic success" because we must avoid an economic 911-Depression. (2 big boxes about 150 books). I know how to solve the "housing & Social Security crisis" at the same time.

1=Feds pay off the foreclosure home loan in exchange for "relinquishing" all Social Security benefits. Balloon payment on home in exchange for no payments later. Homes must remain "debt free" for the life of the "Social Security beneficiary". Feds remove SS obligation and home owner is free of debt.

2=Or start SS monthly payments now to home mortgage. This will increase paperwork vs. #1 above. Owner cannot increase debt/loans while the SS payments are in effect. Owner can sell home & SS payments stop, and SS benefits are reduced by same.

3=Benefits the Fed. Balance sheet and the Home owners at the same time. This will solve the "housing crisis" and "Social Security Obligations" at the same time!

4=Financial markets grow without "guarantees" and Fed. Balance sheet is reduced!

Viola! Everything solved! Just an Idea from a Fellow Kanaka from Oahu!

Thanks & yours truly, www.johnjasonchun.com

4-March 2009 #2 above will increase Fed. Paperwork. I would not want this....

#1 above will reduce Liabilities for homeowners and Fed. Balance sheet. The result could solve all the homes under water as per 1st American Title Research Report states below. All these homes can be Free and clear, and not affected by market value. Home owners can sell their Free & Clear home, but only move the money to another Free & Clear Home without Debt. This way home owners, after loan payoff and Fed. Elimination of SS obligation, can sell and move, but must be Debt Free.

About 8.31 million properties had negative equity at the end of 2008, up 9 percent from 7.63 million at the end of September, according to the study, released Wednesday by First American CoreLogic. The percentage of "underwater" borrowers rose to 20 percent from 18 percent. Another 2.16 million properties could go underwater if home prices fall another 5 percent, the study shows.

Yours truly, JohnJasonChun.com

29March 2010, Mr. Obama, This is JohnJasonChun.com (box of 50 books).

I sent you 100+ books in March 2009 and got no thanks! But okay, you're busy! The above ideas were not implemented, but your plans as president have produced shallow results. Never let a "citizen" manage big money, because they don't know how to manage big money. Never did, never will. Frugal Investors are RARE!!!! But!!!! Immigration Reform can solve the Social Security, Medicaid, and Municipal-Federal Debt obligations too! I can show you how to "pay off" all of the USA debt, all of the Municipal Debt and complete Immigration Reform at the same time! All in one bill!

1=Outline the cost of illegal immigrants; say \$50-100k per year negative cash flow!

2=Outline the cost of immigrant children; say \$25-50k per year negative cash flow!

3=Offer VIP US Citizenship in steps:

1st 1 million that buy into USA citizenship = \$1 million fee to pay off Debt of USA & \$1m Capital!
 2nd million = \$1.2 million to pay off Debt of USA! & \$1.2m Capital!
 3rd million = \$1.4 million etc.
 4th million = \$1.6 million etc.
 5th million = \$1.8 million etc.
 6th million = \$2.0 million etc.

Or Make it a flat \$1m fee to Pay off Debt & \$1m Capital Investment in USA!

Now, let these new citizens in based on their "statement only" and the background investigation will be later, during their 10 year probationary period. This is a CASH and GET immediate CONDITIONAL CITIZENSHIP! No Criminals permitted under this program going back 10 years. All new citizens must bring in the same amount of Capital/Assets as the buy in fee above. This is an immediate Stamp Visa citizenship! 10 years probation! Any Conviction in past 10 years = deported permanently! Any conviction during 10 year probation = Deportation and loss of fees and capital!

All illegal aliens must move out of USA and apply for worker permits. Tax on permits = 200% of regular citizen rates. Any crime=Deportation without conviction & loss of any USA entitlements!

ALL THE NEGATIVE CASH FLOW BY ILLEGALS WILL BE STOPPED, SAVING THE COUNTY, CITY, STATE & FEDS & TRILLIONS IN LONG TERM DEBT & COSTS.

ALL THE POSITIVE CASH FLOW FROM THE RICH NEW CITIZENS WILL BE USED TO PAY OFF ALL FED & MUNICIPAL DEBT (WITH A STRING THAT BUDGETS CANNOT GO UP BY MORE THAN THE POPULATION % + CPI). ALSO, MORE RETIRED CITIZENS MUST BE USED FOR GOVT. WORK VS. HIGH COST WORKERS. LET THE 20-50 AGE CITIZENS WORK IN THE PRIVATE SECTOR. FED DEFICIT CAN BE PAID OFF. FLAT TAX RATE SHOULD BE IMPLEMENTED TO REDUCE TAX CODE AND MAKE ALL CITIZENS EQUAL AND FAIR.

10 MILLION X AVERAGE OF \$1.5 MILLION = **\$15 TRILLION TO PAY OFF ALL DEBT!**
 10 MILLION X ASSETS/CAPITAL IMPORTED = **\$15 TRILLION=BOOST ECONOMY!**
THIS WILL SOLVE ALL PROBLEMS IN USA, NO MORE DEBT OR CASH PROBLEM!

1 NOTE: ALL NEW BUY IN CITIZENS (10 YEAR PROBATION VISA) MUST HAVE A MENTOR-FAMILY MEMBER THAT WILL GUIDE THEM THROUGH THE "10 YEARS OF PROBATION"! Dual citizenship will be permitted for these citizens while on the 10 year probation period! ANY BAD BACKGROUND (10 YEARS BACK) WILL BE GROUNDS FOR DEPORTATION. ANY CONVICTIONS FOR 10 YEARS WILL BE GROUNDS FOR DEPORTATION! SIMPLE AND CLEAN & LESS GOVT. REGULATIONS FOR TAX!

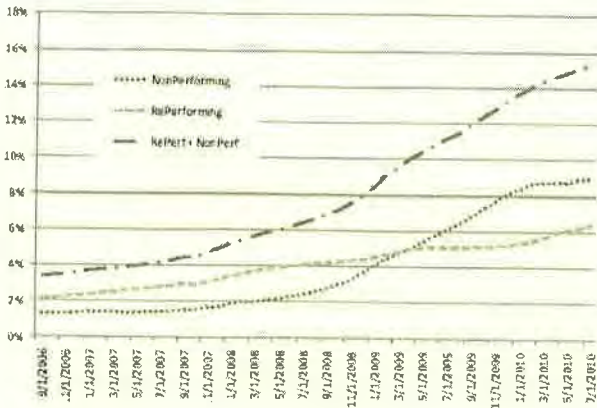

NEW IDEA FOR TO HELP POLICE: ALL BAIL MONEY MUST BE PAID IN CASH/BOND, BUT ANY PERSON CREDITED WITH HELPING TO CONVICT, WILL BE PAID 25% OF THE BAIL, AND 25% OF THE BAIL GOES TO THE GOVT. ENTITY AFTER CONVICTION. 100% REFUND OF BAIL IF NO CONVICTION. THIS WAY 100% OF ALL CRIMINALS HAVE A PRICE ON THEIR HEAD!

How's this for a new method to solve all problems? Yours truly, JohnJasonChun.com

One in Five Borrowers Will Default 3October2010 by Michael David White

A leading mortgage analyst predicts over 11 million homeowners will default and lose their home if the government fails to take more radical intervention. Amherst Securities Group LP, one of the most respected names in mortgage research, has trumpeted an ambitious call-to-government arms in its October mortgage report. "The death spiral of lower home prices, more borrowers underwater, higher transition rates (to default), more distressed sales and lower home prices must be arrested." The authors dismiss recent talk of mortgage performance improvement as statistical sleight-of-hand magically conjured by modifications.

The mortgage balances of delinquencies continues to rise and is artificially reduced by modification plans.

Number of Homes In Jeopardy (in millions):

95% NPL	4.94
70% RPL	2.31
50% APL > 120 MTM LTV	1.30
25% APL 100 – 120 MTM LTV	1.00
5% APL < 100 MTM LTV	2.02
Total	11.57

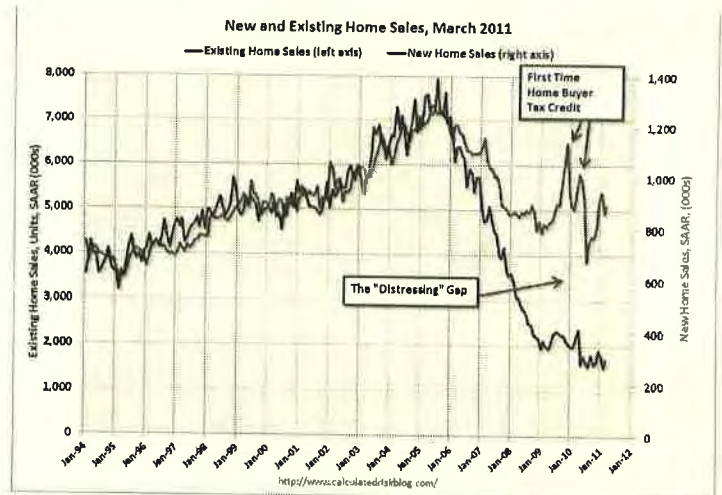

The chart shows 95% of mortgages now 60-days late will default or 5 million homeowners. To be conservative, the authors estimated in this chart that 50% of high negative-equity loans would eventually default, but say the rate today is closer to 75%.

“This ‘improvement’ (in mortgage performance) simply reflects large scale modification activity having served to artificially lower the delinquency rate” (Please see the chart above of mortgage balances delinquent and re-performing. All charts in this post are from “Amherst Mortgage Insight” dated October 1, 2010.). The report offers an astounding forecast of the fate of severe negative-equity properties. Nineteen percent of properties with a loan-to-value (LTV) of 120% or greater are defaulting every year. A death-defying 75% of mortgages on 120% LTV properties will eventually go bad (19% + 19% + 19%, ...).

The current crop of mortgages is already “impaired” at the one-of-five level. Nine of 100 are seriously delinquent. Six of 100 are “dirty current” (made current by modification). Five of 100 are seriously underwater (LTV greater than 120%) (Please see the chart above categorizing the forecast of 11 million defaults.).

The authors, who describe current conditions as leading to “an impossible number” of defaults and one that is “politically unfeasible”, unveil a major arms race of measures to counteract the default tide. The solutions include mandatory principal reductions, looser underwriting of new mortgage loans, leveraged capital pools for investors, and penalties for defaulting homeowners.

Amherst reports that a family who defaults can live rent-free for 20 months on average. They propose that missed mortgage payments, including property taxes and insurance, be counted as W2 income. They make note of recent new signs of distress including two record-low readings of existing home sales in the last two reports. Another block is that underwriting standards have grown much stricter at Fannie and Freddie. Only 2% of Freddie purchases are now bad-credit borrowers where they represented about 20% of borrowers in 2006. FHA purchase mortgages, however, which have by definition much more lenient lending guidelines, have exploded upwards from roughly 10% of their lending in 2006 to more than 50% today. The buyer pool is also compromised by the fact that 17% of borrowers now have a seriously compromised credit history. After mortgage default a typical wait-time to qualify again is anywhere from 3 to 7 years. One of the more desperate measures suggested by the authors seeks a new mortgage for those who are now behind or in danger of failing. “This (default) can be fixed by re-qualifying borrowers who are in a home they can’t afford into one they can afford.”

Gold fever

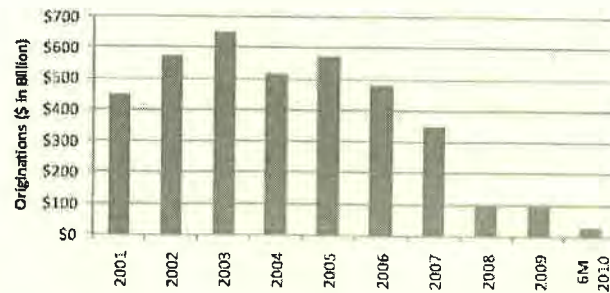

Concerns about the economy and inflation are fueling growing investor interest in gold, though the price is still below its peak of the early 1980s, adjusted for inflation.

\$2,500 a troy ounce

Sources: Bloomberg; Bureau of Labor Statistics

Prime Jumbo Origination

Jumbo mortgages, one of the last significant categories of private investment in property lending, is falling like a rock.

Risk is so high in today's real estate market that private money has largely left the mortgage category. The retreat is most easily seen in the jumbo mortgage market. Total jumbo mortgage origination has fallen from a high of \$650 billion in 2003 to \$92 billion in 2009 (see the chart above). Government loans account for 90% of current originations. "If government policy does not change, over 11.5 million borrowers are in danger of losing their homes (1 borrower out of every 5)," the report said, which estimates the total of homes with a first mortgage at 55 million. "Politically, this cannot happen." 1Jan2011 sent again in triplicate! "I'm willing to work with anyone of either party who's got a good idea and the commitment to see it through," Obama said. "And we should all expect you to hold us accountable for our progress or our failure to deliver."

The Mainland China RICH are Pouring Trillions into Canadian Real Estate! Articles like crazy 2011. USA should have been smart enough to "get this investment" Trillions by offering Green Cards! Rich Green Cards vs. Illegals and Felons.... What is wrong with America???

Foreigners' Sweetener: Buy House, Get a Visa By NICK TIMIRAOS

The reeling housing market has come to this: To shore it up, two Senators are preparing to introduce a bipartisan bill Thursday that would give residence visas to foreigners who spend at least \$500,000 to buy houses in the U.S.

The provision is part of a larger package of immigration measures, co-authored by Sens. Charles Schumer (D., N.Y.) and Mike Lee (R., Utah), designed to spur more foreign investment in the U.S. Supporters of the bill, co-authored by Sen. Charles Schumer, say it would help make up for American buyers who are holding back.

Foreigners have accounted for a growing share of home purchases in South Florida, Southern California, Arizona and other hard-hit markets. Chinese and Canadian buyers, among others, are taking advantage not only of big declines in U.S. home prices and reduced competition from Americans but also of favorable foreign exchange rates.

To fuel this demand, the proposed measure would offer visas to any foreigner making a cash investment of at least \$500,000 on residential real-estate—a single-family house, condo or townhouse. Applicants can spend the entire amount on one house or spend as little as \$250,000 on a residence and invest the rest in other residential real estate, which can be rented out. The measure would complement existing visa programs that allow foreigners to enter the U.S. if they invest in new businesses that create jobs. Backers believe the initiative would help soak up an excess supply of inventory when many would-be American home buyers are holding back because they're concerned about their jobs or because they would have to take a big loss to sell their current house. "This is a way to create more demand without costing the federal government a nickel," Sen. Schumer said in an interview.

International buyers accounted for around \$82 billion in U.S. residential real-estate sales for the year ending in March, up from \$66 billion during the previous year period, according to data from the National Association of Realtors. Foreign buyers accounted for at least 5.5% of all home sales in Miami and 4.3% of Phoenix home sales during the month of July, according to MDA DataQuick. Foreigners immigrating to the U.S. with the new visa wouldn't be able to work here unless they obtained a regular work visa through the normal process. They'd be allowed to bring a spouse and any children under the age of 18 but they wouldn't be able to stay in the country legally on the new visa once they sold their properties.

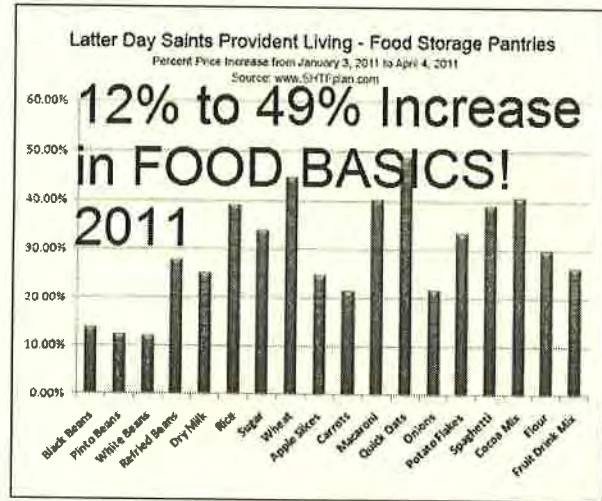

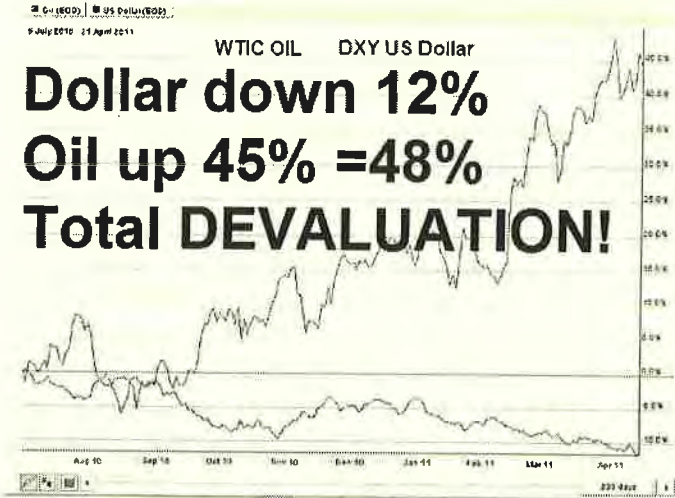

The provision would create visas that are separate from current programs so as to not displace anyone waiting for other visas. There would be no cap on the home-buyer visa program.

Over the past year, Canadians accounted for one quarter of foreign home buyers, and buyers from China, Mexico, Great Britain, and India accounted for another quarter, according to the National Association of Realtors. For buyers from some countries, restrictive immigration rules are "a deterrent to purchase here, for sure," says Sally Daley, a real-estate agent in Vero Beach, Fla. She estimates that around one-third of her sales this year have gone to foreigners, an all-time high. "Without them, we would be stagnant," says Ms. Daley. "They're hiring contractors, buying furniture, and they're also helping the market correct by getting inventory whittled down."

In March, Ms. Daley sold a four-bedroom vacation home in a gated community to Harry Morrison, a Canadian from Lakefield, Ontario. "House prices were going down, and you could still make a lot of money on the exchange rate," said Mr. Morrison, who first bought a home in Vero Beach four years ago.

While a special visa would allow Canadian buyers like Mr. Morrison to spend more time in the U.S., he said he's not sure "what other benefit a visa would give me." The idea has some high-profile supporters, including Warren Buffett, who this summer floated the idea of encouraging more "rich immigrants" to buy homes. "If you wanted to change your immigration policy so that you let 500,000 families in but they have to have a significant net worth and everything, you'd solve things very quickly," Mr. Buffett said in an August interview with PBS's Charlie Rose. The measure could also help turn around buyer psychology, said mortgage-bond pioneer Lewis Ranieri. He said the program represented "triage" for a housing market that needs more fixes, even modest ones. But other industry executives greeted the proposal with skepticism. Foreign buyers "don't need an incentive" to buy homes, said Richard Smith, chief executive of Realogy Corp., which owns the Coldwell Banker and Century 21 real-estate brands. "We have a lot of Americans who are willing to buy. We just have to fix the economy." The measure may have a more targeted effect in exclusive markets like San Marino, Calif., that have become popular with foreigners. Easier immigration rules could be "tremendous" because of the difficulty many Chinese buyers have in obtaining visas, says Maggie Navarro, a local real-estate agent.

Ms. Navarro recently sold a home for \$1.67 million, around 8% above the asking price, to a Chinese national who works in the mining industry. She says nearly every listing she's put on the market in San Marino "has had at least one full price cash offer from a buyer from mainland China."

25 Signs The Worst Housing Collapse in Us History is Getting Worse

- 1- 11% of Homes Empty & 2- Home Ownership RATE Lowest since 1998
- 3- 1 Million Repos in USA 1st time ever in History 4- Economists say Double Dip
- 5- 6 Million Repos=shadow inventory 6- More repos=72% of Metro Areas
- 7- 8 Million=1 Mortgage payment late, 5 Million=2+ payments late=1M+Repos 2011
- 9- 2012=20 million under water=28% of USA 10- Industrial Cities=Ghost Towns
- 11- Banks hoarding Cash vs. offering Loans! 12- Prices down=Great Depression!
- 13- State expenses way higher vs 2008 14- Job growth is anemic
- 15- \$14.5 trillion in USA Debt 16- Congress will not help states
- 17- % rates going higher Usa&International 18- Mortgage % higher
- 19- Congress=spending cuts+TAX Increases 20- Gas prices \$4-5/gallon
- 21- Govt. hiking fees/taxes killing Jobs! 22- Property taxes rising
- 23- Home prices falling 75% metro areas 24- Muni Bond expecting Defaults!
- 25- Inflation returning in other countries+USA 26- Riots due to inflation & no jobs.
- 27- 23% of all homes underwater
- 28- Professor Shiller: The probability of another 15 to 25% price decline is high!
- 29- The US municipal bond market, blighted by concern that struggling states & cities could default on their obligations, has gone into a deep freeze Expiring unemployment benefits.
- 30- Cutbacks in state budgets 31- Rising taxes in many states 32- Congressional focus on cutting the deficit 33- Pent-up demand for autos is exhausted
- 34- Renewed housing slump 2012
- 35- Massive housing inventory 7-8million? 36- End of QEII 37- Gas prices \$5?

2011 Outlook: Pain as Housing Falls Another 15-30%

Data shows as of November 2010 the slump in U.S. housing prices had surpassed that of the 1930s. For 53 consecutive months American home prices have fallen. What's more, their 26% drop on average since 2006 exceeds the home price meltdown of the first 5 years of the Great Depression! \$1.7 Trillion Value Drop Expected for 2011 in home Prices! 2009=only \$1trillion drop! The Robo-signing fight is about another \$1-\$2 trillion in losses that are coming! 15 bone chilling signs that part two of the double dip housing crash has begun.... **#1** Home seller have decreased asking prices >1x went up for three months in a row. **#2** According to Trulia.com, 26% of all homes have experienced a price reduction. **#3** Prices will decline for 3 years as 12 million more homes get put on the market. **#4** Total housing inventory increased to 3.98 million in July, 13 months of inventory! **#5** 36 states experienced home price declines in July, twice the number in May **#6** Homes sales fell 27%! 11 million falling behind in payments+7million under water! **#7** Fannie Mae is now projecting sales will experience a 7 % decline for the year. **#8** The Mortgage Bankers Association said loan demand has sunk to a 13-year low. **#9** Construction of new homes is down 83% from the peak of the market in 2006. **#10** 1 out of 7 homes are either delinquent or in foreclosure during the 1stQ of 2010. **#11** As of this March, U.S. banks had an inventory of 1.1 million foreclosed homes, which was a new all-time record and which was up 20 % from one year ago. **#12** CNBC reported the banks repossessed a record number of homes in August. **#13** According to Mark Zandi, the chief economist at Moody's Analytics, approximately 2 million more homes will be repossessed by mortgage lenders by the end of 2011. **#14** As of June 30th, 23 % of all residential mortgages in the United States were "underwater". 11 million under water and 7 million behind in payments! **#15** The head economist for Fannie Mae, Douglas Duncan, recently stated during a radio interview that seven million homes in the United States are either vacant or are in the foreclosure process. That is one gigantic pile of homes. How in the world is the U.S. housing market possibly going to find buyers for all of them? 40 million mortgage loans showed an acceleration of U.S. home loan delinquencies 31%=15million Home owners with **negative equity** and \$2.5 Trillion Mortgages Total! The reality is: Big companies may **never rehire large numbers of workers**. US businesses are investing in **labor-saving technologies**. This makes profit not jobs! 46% of the unemployed have been without work for **six months or more!** **GM sells more cars in China**, (32,000 employees) than USA (52,000 workers)! 83% of all U.S. stocks are in the hands of **1% of the people.** **61% of Americans live paycheck to paycheck**, was 49% in 2008 & 43% in 2007. 66% of the income growth from 2001-2007 went to the top 1% of workers! 36% of Americans say that they don't contribute anything to retirement savings. 43% of Americans have less than \$10,000 saved up for retirement. 24% of American workers have postponed their planned retirement age in 2009. CNNMoney.com reported this week that American homes are expected to be worth \$1.7 trillion less in 2010 than they were worth in 2009. That's much greater than the \$1 trillion loss in 2009, and means that since the market peak in 2006, the U.S. housing market has lost a total of 9 trillion dollars .

Employed But Struggling: Report Finds 1 in 3 Working Families Near Poverty First Posted:12-21-10

Over 1.4 million filed bankruptcy in 2009, which represented a 32% more than 2008.

5% earned enough additional income to match the rise in housing costs since 1975.

1st time in history, banks own more of residential housing net worth than people!

1950, the ratio of the average executive's paycheck to the average worker's paycheck was about 30 to 1.

Since 2000, that ratio has exploded to between 300 to 500 to one.

In 2007 the bottom 80% of households held about 7% of the liquid financial assets.

The bottom 50% of earners now collectively own less than 1% of the nation's wealth.

Average Wall Street bonuses for 2009 were up 17% when compared with 2008.

The average federal worker earns 60% MORE than the private sector.

The top 1% own nearly twice as much of wealth as they did just 15 years ago.

The average time needed to find a job has risen to a record 35.2 weeks.

More than 40% are now working in service jobs, which are often very low paying.

40 million Americans are on food stamps on 2010. An it's 43Million in 2011.

American workers now must compete against: in China a garment worker makes approximately 86 cents/hr. & in Cambodia they make 22 cents an hour.

2% of all children are living below the poverty line in 2010 - the highest since 1990.

The number of millionaires in the US rose a whopping 16 % to 7.8 million in 2009.

The top 10 % of Americans now earn around 50 % of our national income. -90% homes Underwater, NO

EQUITY Riverside/San Bernardino County -Foreclosures Up 261-900% =12.44% of homes

in default (30+ days late) USA -5.0 million foreclosures 2010 =15.02% of U.S. homes in

foreclosure or default -3.9 million foreclosures 2009 =4.5% of homes in U.S. in foreclosure Q4th2009

Banks Profits drop 86% and Banks WEAK LIST UP 170%, to 770 Banks on watch list! IMPORTS DOWN 45% AT LONG BEACH & LOS ANGELES HARBORS! Japanese Car Sales down 30-45% World WIDE Increase in Bankruptcies Crime Homeless Domestic Abuse Welfare Food Stamps Obama over Spent \$1.8 trillion in 2009-2010. USA produces only \$14 Trillion. In 2009: collapsing real estate, banking crisis, tapped out consumers, rising energy prices, global recession, overbought stock market, credit freeze, massive layoffs, IN 2010: Too much federal deficit spending and stimulus, state and federal tax revenue shrinking, contracting economy, collapsed real estate market, consumers now savers, not spenders, erratic dollar, Euro Crisis, Rising energy prices, Oil Environmental crisis, end to Cheap Federal Loans & subsidies, the collapse of commercial real estate & credit shrinking! 57 million homes at 95% Loan2Value & 15 million short sales? 75% of all California homes have ZERO to NEGATIVE EQUITY, 25% of all California credit card holders are "defaulting", 25% of all California adults are "unemployed or UNDEREMPLOYED", Workers are returning to Mexico & Central America since no work is available! California's economy is shrinking by 10-15% per year, California's Population is shrinking by 5-15% in some counties! 40 million Americans on food stamps! Was 23 million, Will be 43million in 2011!! This is the equivalent of 1 in 8 Americans!!! IN 2011: 2nd Foreclosure wave is unemployed & No Equity homes, 3rd Foreclosure wave is Commercial buildings, 4th Foreclosure wave small businesses going Bankrupt, No buyer for consumer "big ticket" items, cars, boats, trailer homes, toys, etc., Obama Health care will "smash revenue" to health care employees & businesses! Homes with loan balances of \$1 million+, 15% are 90-days delinquent by Jan.2010. That compares to a rate of 8.7 % for all U.S. loans. That means about 25% are at least 1 payment behind, and possibly more are living paycheck to paycheck! Home permit count down 95.3% in California Rural Residential Areas!

23 New Taxes Floated By The Obama Administration for 2010! Federal Loan Window Swap opened & available to Euro Countries & Banks!!! Home Tax Credit \$8000 & \$1.2 trillion mortgage note purchase ended April 1, 2010. European Union Defaulting on Govt. Loans, Portugal, Spain, Greece, Iceland, Ireland 8 million American Jobs lost and the WORLD STOCK MARKET LOST \$37 TRILLION! **US workforce shrank by 652,000 in June2010=Start of Depression 1932.** Forbes Magazine said 50% more drop in prices from 2010 to 201 Florida Luxury Homes not expected to recover till 2017800,000 California Homes delinquent vs. 112,000 homes in MLS. 300,000 homes per month sale USA vs. 800,000 a month Lowest since 1963. 10% price drop from May2009 to May 2010 (with \$1.3 trillion spent to support Homes?) Internet Homes Searches Down 20% from 1 year ago! \$400Billion Lost to Fannie Mae & Freddie Mac! Repos Inventory up 20% from 2009! 2nd Wave of Mortgage Adjustments due 2011-2013! 10% of homes missed payments! Flood of Car Leases being broken & abandoned as reported by Car Leasing Firms! The G20 meeting (20 biggest world economies) account for over 90% of the world's Gross Domestic Product are focusing on Fiscal Debt Reduction = smaller Budgets! Military received average compensation of \$122,263 in 2009, up from \$58,545 in 2000. As of October2010=7.04 million households were DELIQUENT up 1% in the past two months. 25% of mortgage holders or 6.2 million owe more on their house than it's worth. Housing prices are at risk of declining another 20%, putting more homeowners under water and more into foreclosure. Recent documentation flaws are keeping foreclosures off the market, but foreclosures currently account for 25% to 40% of all housing sales. Without a foreclosure inventory, sales will continue to decline, taking housing prices with them. The unsold housing inventory, visible and shadow (foreclosed or seized homes held by banks that have not yet been put on the market) stands at 6.2 million units or a 1.5 years' supply. A recent backup in mortgage rates to 4.83% from 4.17%. Between 2003 and 2007, 40% of all new jobs were in some way related to housing. As of October2010=7.04 million households were DELIQUENT up 1% in the past two months. www.patrick.net

29 absolutely crazy statistics about the housing crisis that show just how nightmarish the U.S. housing market is right now....

- #1 1Q2011, lowest new homes were sold in any quarter period ever recorded.
- #2 The SP/Case-Shiller 20-city index has fallen 7 months in a row Aug- Mar2011
- #3 U.S. home prices have now declined 32% from the peak of the housing bubble.
- #4 Phoenix home prices are now down 56% from the peak of the housing bubble.
- #5 Las Vegas homes are now down 58% from the peak of the housing bubble.
- #6 Nearly 70% of all Las Vegas mortgages are now underwater.
- #7 There are now more than 167,000 vacant homes in the state of Nevada.
- #8 25% of all homes in Miami-Dade County are in distress (foreclosure)?
- #9 Census reports 13% of all homes in the United States are sitting empty.
- #10 Census Bureau: 18% of Florida homes are vacant. Up 63% in 10 years.
- #11 In the city of Detroit alone, there are more than 33,000 abandoned homes.
- #12 Merced, California has declined in value by 63% over the past 4 years.
- #13 U.S. home values have lost \$6.3 trillion dollars in this housing crisis.
- #14 California leads foreclosures with 546,669 for 2010! (4% of California!)
- #15 Total home mortgage debt is now 500% larger than it was just 20 years ago.
- #16 26% of all renters in the US spend more than half their pre-tax income on rent.
- #17 49% of all American renters are paying out more in rent than they can afford.
- #18 In 1996, 89% believed that it was better to own vs. rent. Today that # is 63%.
- #19 72% of metropolitan areas had more foreclosures in 2010 than in 2009.
- #20 Two years ago, 11 late payments = foreclosure, now it's 18!
- #21 In September 2008, 33% knew someone in foreclosure, now it's 48%.
- #22 1Q2011, 1.8 million "shadow inventory" will extend housing crisis for years.
- #23 In Feb.2011, U.S. housing starts experienced their largest decline in 7 years
- #24 1Q2011, US home sales are now down 80% from the peak in July 2005.
- #25 Bank repossessions and short sales now make up 30% of all US home sales #26 Home sale declined for 5 years & are expected to be lower for more years!
- #27 In a recent Rasmussen survey 31% indicated that they are "underwater".
- #28 Deutsche Bank says 48% of US mortgages will be under water by 1Q2012
- #29 According to the Mortgage Bankers Association, at least 8 million Americans are currently at least one month behind on their mortgage payments.

The total value of derivatives in the world exceeds total global gross domestic product by a factor of 10, these derivatives were the cause of the 2008 Financial Crisis and have increased to 1000% of World Gross Product.

Hopefully we can get the American people to wake up. The following are 50 things that every American should know about the collapse of the economy.

- #1 Remember the "Misery Index" during the presidency of Jimmy Carter? At that time, the "Misery Index" was constantly making headlines in newspapers all across the country. Well, according to John Williams of Shadow Government Statistics, if we calculated unemployment and inflation the same way that we did back during the Carter administration, then the Misery Index today would actually be higher than at any point during the presidency of Jimmy Carter.
- #2 According to the U.S. Bureau of Labor Statistics, an average of about 5 million Americans were being hired every single month during 2006. Today, an average of about 3.5 million Americans are being hired every single month.
- #3 According to the Wall Street Journal, there are 5.5 million Americans that are currently unemployed and yet are not receiving unemployment benefits.
- #4 All over America, state and local governments are selling off buildings just to pay the bills. Investors can now buy up government-owned power plants, prisons and municipal buildings from coast to coast. For example, the mayor of Newark, New Jersey recently sold off 16 government buildings (including the police and fire headquarters) just to pay some bills.
- #5 When Americans think of "government debt", most of them only think of the federal government, but it is not just the federal government that has a massive debt problem. **State and local government debt has reached an all-time high of 22 % of U.S. GDP.**
-
- #6 If you can believe it, 1/7 Americans has at least 10 credit cards.
- #7 Credit card use is on the increase. During the month of March 2011, revolving consumer credit jumped 2.9%. Sadly, it looks like Americans have not learned their lessons about the dangers of credit card debt.
- #8 Social Security ran a deficit (2010) for the first time since 1983, and the "Social Security deficits" in future years are projected to be absolutely horrific.
- #9 The Fed says Medicare trust fund will run out five years faster than they were projecting just last year.
- #10 Right now we are watching what could potentially be the worst Mississippi River flood ever recorded play out right in front of our eyes. One agricultural economist at Mississippi State University believes that this disaster could do 2 billion dollars of damage just to farms alone.
- #11 The "tornadoes of 2011" that we just saw in the southeast are being called the worst natural disaster that the U.S. has seen since Hurricane Katrina. It has been estimated that up to 25 % of all of the poultry houses in Alabama were either damaged or destroyed. Plus millions of birds were killed.
- #12 The economic effects of the BP oil spill just seem to continue. The number of very sick fish in the Gulf of Mexico is really starting to alarm scientists. Example: *Scientists are alarmed by the discovery of unusual numbers of fish in the Gulf of Mexico and inland waterways with skin lesions, fin rot, spots, liver blood clots and other health problems.*
- #13 The number of "low income jobs" in the U.S. has risen steadily over the past 30 years and they now account for 41 % of all jobs in the United States.
- #14 Hospitals that care for the poor and needy are so overwhelmed and are so broke that they are being

forced to shut down. Recently, a local newspaper in Florida ran an article about two prominent charity hospitals in Illinois that have served the poor for more than 100 years but are now asking for permission to shut down. *Two charity hospitals in Illinois are facing Bankruptcy. There's not much left of either of them - one in Chicago's south suburbs, the other in impoverished East St. Louis - aside from emergency rooms crowded with patients seeking free care. They want the state's permission to shut down.*

#15 The Dollar is so weak, Steve Forbes is predicting a gold standard within the next five years.

#16 Most Americans don't realize how much the U.S. dollar has been devalued over the years. An item that cost \$20 in 1970 would cost you \$115.93 today. \$20 in 1913 would cost you \$454.36 today.

#17 Over the past year gasoline in the United States has gone up by about 30%.

#18 US oil companies make about \$200 billion in pre-tax profits this year. They will also receive about \$4.4 billion in specialized tax breaks from the IRS.

#19 OPEC will sell over a trillion dollars this year. Their biggest customer is the United States.

#20 According to the Pentagon, over a trillion dollars in minerals is in Afghanistan. J.P. Morgan is starting to tap those riches with the help of the U.S. military.

#21 J.P. Morgan is actually the largest processor of food stamp in USA.

#22 2007=26 million Americans used food stamps. 2010=44 million & 25% of American children!

#23 1965=1 in 50 Americans was on Medicaid. 2010= 1 in 6 Americans is on Medicaid.

#24 67% of American men had a job last year. The lowest level that has ever been recorded ever!

#25 The financial system is more vulnerable today than it was back in 2008 before the financial panic. Today, the world financial system has been turned into a giant financial casino where bets are made on just about anything you can possibly imagine, and the major Wall Street banks make a ton of money from this betting system. The system is largely unregulated (the new "Wall Street reform" law has only changed this slightly) and it is totally dominated by the big international banks. The danger from derivatives is so great that Warren Buffet once called them "financial weapons of mass destruction". It is estimated that the "derivatives bubble" is somewhere in the neighborhood of a quadrillion dollars, and once it pops there isn't going to be enough money in the entire world to bail everyone out.

#26 Between December 2000 and December 2010, the United States ran a total trade deficit of 6.1 trillion dollars and the U.S. has had a negative trade balance every single year since 1976.

#27 The US has lost an average of 50,000 manufacturing jobs per month since China joined the World Trade Organization in 2001. US trade deficit with China is now 27 times larger than it was back in 1990.

#28 In 2010, the number one U.S. export to China was "scrap and trash".

#29 All over the US, many of our once great manufacturing cities are being transformed into hellholes. In the city of Detroit today, there are over 33,000 abandoned houses, 70 schools are being permanently closed down, the mayor wants to bulldoze 25% of the city & you can literally buy a house for \$1.

#30 During the 1Q2011, less new homes were sold in the US than in any 3 month period ever recorded.

#31 New home sales in the United States are now down 80% from the peak in July 2005.

#32 Home prices have fallen a whopping 33% from the peak of the housing bubble.

#33 According to the AFL-CIO, the average CEO made 343 times the average American.

#34 The European debt crisis could cause a global financial collapse like the one that we saw in 2008 at

any time. The world economy is incredibly interconnected today, and the United States is not immune.

#35 According to one study, the 50 U.S. state governments are collectively 3.2 trillion dollars short of what they need to meet their pension obligations.

#36 A study has shown that Americans are \$6.6 trillion short of what they need to retire comfortably.

#37 The cost of college tuition in the United States has gone up by over 900 % since 1978. **#38** The

Bureau of Economic Analysis says health care costs accounted for just 9.5% of all personal consumption back in 1980. Today it's 16.3%.

found 41% of Americans have medical bills & medical debt.

#39 One study

Fannie Mae, Freddie Mac & Sallie Mae=3.2 trillion=2008! In 2011=\$6.4Trillion& now taxpayers are

#40 Total debt of

standing behind that debt.

#41 US debt is

over 14 trillion and the budget deficit for this year is projected to be about 1.5 trillion dollars. But, if we used GAAC aka Generally Accepted Accounting Principles (like all publicly-traded corporations must), the budget deficit would be in the neighborhood of \$4-\$5 trillion each and every year. **#42** The FED spent over 413 billion on interest on the national debt during fiscal 2010, and it is being projected that the FED will be shelling out 900 billion just in interest on the national debt by the year 2019.

#43 Standard & Poor's has altered its outlook on U.S. government debt from "stable" to "negative" and is warning that the U.S. could soon lose its AAA rating.

#44 In 1980, government transfer payments accounted for just 11.7% of all income. Today, government transfer payments account for 18.4% of all income.

#45 Households are receiving more income from the FED than they pay into the Fed Govt.

#46 59% of Americans receive government money in one form or another.

#47 41% believed the economy was "getting better" last year. Today, that number is at j27%

#48 The top 1% of USA owns over 33% of all the wealth in the United States.

#49 The bottom 50% of Americans own just 2.5% of all the wealth in USA.

#50 The millionaires in Congress is 50 times higher than the general population.

Insiders Are Voting With Their Feet. In the face of excess supply and weak demand in the housing market, the only thing that would convince me of a potential rebound would be if housing industry insiders were optimistic. But that's not happening.

~ **Statistic #1 – Insider Sentiment.** Take **PulteGroup** (NYSE: PHM), for example. The company has slashed almost 75% of its employees since the housing market peaked. And yet, the company recently announced another consolidation plan... but this time, in the executive ranks. It doesn't bode well for a rebound when the nation's second-largest homebuilder is still firing, not hiring. And while PulteGroup's decidedly bearish actions are speaking louder than its words, other homebuilders are vocally bearish, too. One of them is **Toll Brothers Inc.** (NYSE: TOL), the largest U.S. luxury homebuilder. Its CEO, Douglas Yearley Jr., says spring sales have been "disappointing" and that "people are still scared." And of the housing market, Bill Wheat, Chief Financial Officer of **DR Horton** (NYSE: DHI), says, "We feel it could still be a struggle in 2012." Additionally, no insiders at the three homebuilders mentioned are backing up the truck to buy their own company's shares at depressed prices. So clearly, they don't have any faith in a

rebound yet. And that's the feeling among analysts, economists and industry experts, too. **Can You Say "Consensus?"**. Believe me, as a longtime contrarian investor, I tried to find an exception. But I couldn't dig up one single expert who's predicting a rebound in real estate prices in 2011. Instead, they're all decidedly negative. Consider:

~ **Statistic #2 – More Price Declines This Year.** Jason Kopcak of Cantor Fitzgerald says prices could fall another 10% to 15% this year.

~ **Statistic #3 – No Housing Bottom Until 2012.** CoreLogic expects prices to drop another 5% before bottoming out in 2012. Yale University economist, Robert Shiller (of the S&P/Case-Shiller Home Price Indexes), weighs in, too, stating that although it's unlikely, "a 30-year decline in home prices [adjusted for inflation] is certainly a possibility." I'm all for being a contrarian. But in this case, banking on a real estate rebound isn't contrarian... it's stupid. And it appears that investors who were previously betting on a rebound are finally waking up to this reality, too. **Premature Speculation is Waning.** If we take a closer look at the home buying that *is* actually occurring, one trend immediately stands out: Investors' interest in residential real estate is wavering.

~ **Statistic #4 – All-Cash Transactions.** All-cash transactions dropped to 31% in April, down from a record level of 35% in March. And because investors account for the majority of all-cash purchases, the drop suggests that they're waking up to the poor fundamentals and waiting for more attractive entry points.

~ **Statistic #5 – Home buying Activity.** If we take purchase activity overall, the trend is pointing down there, too. In April 2010, for example, investors only accounted for 15% of purchase activity. In March 2011, that number had risen to 22%. But last month, the figured dipped to 20%. Simply put, investors jumped the gun. They thought that prices a year ago represented an attractive entry point and starting buying. But now they're tapping the brakes. Coincidence? I think not. **Don't Fight the Trend.** So what if you doubt every statistic I've provided both here and in yesterday's column? Well, there's one set of numbers that you can't refute. And that's the actual trend in residential real estate prices. After all, momentum is a powerful market force – and in this case, it's headed in the wrong direction.

~ **Statistic #6 – A Miserable First Quarter.** Zillow.com reports that home prices fell another 3% during the first quarter – the biggest quarterly decline since 2008. As Stan Humphries, Zillow's Chief Economist says, "Home value declines are currently equal to those we experienced during the darkest days of the housing recession." He adds, "With accelerating declines during the first quarter, it is unreasonable to expect home values to return to stability by the end of 2011." Bottom line: Real estate prices are still declining... and headed lower still. So don't fight it... just accept it. And then do something about it.

While D.C. and Wall Street burns the middle class flails – top 10 percent control 98 percent of all financial security wealth. For stocks and mutual funds bottom 90 percent controls only 19 percent of total assets.

Bad Economy! WASHINGTON DC'S FAULT?

- 83% of all U.S. stocks are in the hands of 1% of the people.
- 61% of Americans "usually" live paycheck to paycheck, which up from 49 % in 2008 and 43 % in 2007.
- 66 % of the income growth between 2001 and 2007 went to the top 1% of all Americans.
- 36 % of Americans say that they don't contribute anything to retirement savings.
- A staggering 43 % of Americans have less than \$10,000 saved up for retirement.
- 24% of American workers say that they have postponed their planned retirement age in the past year.
- Over 1.4 million Americans filed for bankruptcy in 2009, which represented a 32 % increase over 2008.
- Only the top 5 % of US households have earned income to match the rise in housing costs since 1975.
- 1ST time banks own a greater share of housing net worth in the us than all individual Americans.
- In 1950, Executive's vs. worker's paycheck was about 30/1. Since 2000, it's been 300-500/1.
- As of 2007, the bottom 80 % of American households held about 7% of the liquid financial assets.
- Bottom 50% of income earners in the US now collectively own less than 1 % of the nation's wealth.
- Average Wall Street bonuses for 2009 were up 17 % when compared with 2008.
- The average US federal worker now earns 60% MORE than the average worker in the private sector.
- Top 1 % of US households DOUBLED their corporate wealth in 15 years.
- In America today, the average time needed to find a job has risen to a record 35.2 weeks.
- 40%+ of Americans are working in service jobs, which are often very low paying.
- 40 million Americans are on food stamps, projections it will go up to 43 million Americans in 2011.
- China a garment worker makes 86c/hr, Cambodia it's 22 cents an hour.
- 21 % of all children in the US are living below the poverty line in 2010 - the highest rate in 20 years.
- Despite the financial crisis, the # of millionaires in the US rose a whopping 16 % to 7.8 million in 2009.
- The top 10 % of Americans now earn around 50 % of our national income.

25 signs that the financial world is about to hit the big red panic button

- #1 Merrill Lynch: the US economy has an 80% chance of going into another recession.
- #2 Will Bank of America be the next Lehman Brothers? Shares have fallen more than 40%. Even though Warren Buffet \$5 billion, the reality is that the problems for Bank of America are far from over. An analyst is projecting that Bank of America is going to need to raise 40 or 50 billion dollars in new capital.
- #3 European bank stocks have gotten absolutely hammered in recent weeks.
- #4 So far, major international banks have announced layoffs of more than 60,000 workers, and more expected! *UBS has announced 3,500 layoffs, Citigroup is quietly cutting dozens of traders. Bank of America could cut as many as 10,000 jobs, 3.5%. ABN Amro, Barclays, Bank of New York Mellon, Credit Suisse, Goldman Sachs, HSBC, Lloyds, State Street and Wells Fargo have all announced plans to cut jobs — tens of thousands all told.*
- #5 Credit markets are really drying up. 2008? Many expect we are getting very close to a repeat of that.
- #6 US Confidence Index fell to 44.5 in August. The lowest reading that we have seen since the last recession!
- #7 The University of Michigan Consumer Sentiment Index has fallen to the lowest it has been in 30 years.
- #8 The Philadelphia Fed's latest survey of regional manufacturing activity was absolutely nightmarish.... *The survey's broadest measure of manufacturing conditions, the diffusion index of current activity, decreased from a slightly positive reading of 3.2 in July to -30.7 in August. The index is now at its lowest level since March 2009*
- #9 According to Bloomberg, since World War II almost every time that the year over year change in real GDP has fallen below 2% the U.S. economy has fallen into a recession (1948).
- #10 *A monthly European Commission survey showed economic sentiment in the 17 countries using the euro fell to 98.3 in August from a revised 103 in July with optimism declining in all sectors.*
- #11 The yield on 2 year Greek bonds is now an astronomical 42.47%.
- #12 The European Central Bank is buying up huge amounts of sovereign debt from troubled nations such as Greece, Portugal, Spain and Italy. As a result, the ECB is also massively overleveraged at this point.
- #13 Most Europe Banks are leveraged to the hilt and have tremendous exposure to European sovereign debt.
- #14 The Greek bailout package is faltering. *Finland got Euro 500 million in cash security. Now Finland, Austria, the Netherlands and Slovakia also are now demanding collateral. Germany now wants similar collateral.*
- #15 German Chancellor Angela Merkel is trying to hold the Greek bailout deal together, but a wave of anti-bailout "hysteria" is sweeping Germany, and now according to Ambrose Evans-Pritchard it looks like Merkel may not have enough votes to approve the latest bailout package....
- #16 Polish finance minister is warning: if the EU does not choose the path of much deeper economic integration the eurozone simply is not going to survive much longer....
- #17 German voters are against "Eurobonds" by about a 5 to 1, so economic integration does not look promising.
- #18 *In Greece, government debt is almost 160% of GDP=15%cost will amount to 24% of GDP.*
- #19 The global banking system has \$2trillion of Greek, Irish, Portuguese, Spanish and Italian debt.
- #20 The head of the IMF warned that European banks are in need of "urgent recapitalization".
- #21 *It is only a matter of time until Europe has a true crisis, which will happen faster – Think Lehman on steroids.*
- #22 The U.S. housing market is a mess, home prices fell 5.9% in the Q2, & sales dropped 3.5% during July.
- #23 The decline in U.S. economic data over the past three months has been absolutely unprecedented.
- #24 Morgan Stanley says US & Europe are close to a recession & we may enter one in the next 6 to 12 months
- #25 Minneapolis Fed President says that he may drop his opposition to more monetary easing.

There's No Bottom In Sight For Plummeting Home Prices

“At the end of June 2011, macromarkets.com released the results of a poll in which 108 leading economists and housing market analysts were asked to predict the direction of home prices from now until 2015. All except four of them predicted that housing markets around the country would hit bottom no later than the end of 2012 before climbing again. Only one of them thought that home prices would not hit bottom until the end of 2013. By way of contrast, a survey of consumers released in May by trulia.com and realtytrac.com found that 54% thought that a housing market recovery would not occur until “2014 or later.””

RE: Public Comment on the Supplement to the Draft Programmatic Environmental Impact Statement (PEIS) for Solar Energy Development in Six Southwestern States

Dear Sir or Madam:

Thank you for the opportunity to review and comment on the Supplement to the Draft PEIS. We previously reviewed and submitted comments on the original document for the Draft PEIS. We are in support of the changes that have been made in the Supplement, especially the reduction in the size and number of the Solar Energy Zones being proposed, particularly the reduction of the Riverside East SEZ. All of our other comments made in our correspondence of April 18, 2011 still apply. For your convenience, I am attaching a copy of our original comment letter.

If you have any questions, please feel free to contact Greg Neal, Deputy Director, at 951-955-3266.

Sincerely,

**RE: Public Comment for the Draft Solar Programmatic Environmental Impact Statement (PEIS)
for Solar Energy Development in Six Southwestern States**

Dear Sir or Madam:

Riverside County is a recognized leader in the protection of natural communities and endangered species. It developed both the Coachella Valley and Western Riverside Multi Species Habitat Conservation Plans (HCP) and has been implementing them for over ten years. These HCPs balance environmental protection and economic development objectives, while simplifying compliance with endangered species laws.

Riverside County supports renewable energy. Because it is uniquely suited for the location of renewable energy, and particularly solar, Riverside County will bear a disproportionately heavy burden for renewable energy production. For that reason, Riverside County is taking this opportunity to comment on the Draft PEIS, both because of its expertise in these issues and because of the direct impact BLM's action has on Riverside County today and into the future.

Consistent with this leadership role, Riverside County has carefully examined the Draft PEIS, particularly with regard to the Riverside East SEZ, and has the following general comments:

WATER RESOURCES

There is not clear analysis of water resources demand, availability, potential for individual project impact, broader community impact, and quantifiable potential for contamination. The PEIS acknowledges that there could be considerable draw down of groundwater level at various stages of projects and recognizes that there is insufficient information to understand and codify the impacts. Without a clear understanding of the impact on the water resources, it is impossible to assess the impact of the project on people, species, and habitats. There is not a consideration of the potential for increased global temperature and how that would further exacerbate the demand on water resources.

The PEIS states that, for some projects, potable water may need to be trucked to project sites during construction. The impact of the trucking of potable water is not considered in the analysis.

SPECIES IMPACTS

Generally, the evaluation of species impacts is too simplistic. It does not adequately address quality of habitat, biological processes, populations or impacts to connectivity and populations resulting from development. Further, it does not adequately speak to the impact(s) of depletion, redirection, or disruption of water resources on species, habitats, and biological processes.

Palm Desert, California 92211
(760) 863-8277 · Fax (760) 863-7555

RECREATION

Riverside County views recreational opportunity as a quality of life, economic, and aesthetic issue. Recreation is an historic use that is imbedded in the patterns of life and memory of Riverside County residents and those from outside of the County who have taken advantage of Riverside County's rich recreational opportunities. While this document discusses impacts to recreation as a result of the siting of projects, it does not clearly address how the impacts to recreation will be mitigated. In Appendix A.2.2.6, it states, "Solar facilities shall not be placed in areas of unique or important recreation resources". A definition of "unique or important recreation resources" is necessary to understand what areas of recreation resources will be avoided. Further, there is not a consideration of lands set aside for mitigation. It should be assumed that some or most of the mitigation lands will be closed or severely limited in potential for recreational use. How will the loss of recreational use of mitigation lands be mitigated? Finally, the PEIS does not adequately address the impact of projects adjacent to recreational areas. To what extent will the large scale change in the overall character of the SEZ discourage recreation use in recreational areas adjacent to the SEZ and how will this be mitigated?

DESIGN FEATURES FOR WILDLAND FIRE

Appendix A.2.2.5 addresses internal fire breaks sufficient to "remove the need for protective responses by the BLM, state, and local fire organizations" resulting from fire from within the facility moving out or from fire from without entering and threatening the facility. First, there is no realistic design that will truly "remove the need". Second, there must be recognition of a reasonable point at which undue threat is avoided and an exorbitant amount of land, which will require mitigation, is saved from being used as a fire break. For these reasons, there must be a provision for fire response.

TRANSMISSION

The document states that additional construction of transmission or road facilities was not assessed because of the availability of an existing transmission line and access to I-10. Capacity on existing transmission facilities is a clear issue. Additional transmission capacity that will be required both within the SEZ and outside of the SEZ should be analyzed.

VISUAL RESOURCES

The evaluation of visual impacts in the PEIS does not include the impact of transmission. To attempt to evaluate visual impacts without including transmission is to only look at half the picture. The visual impact of transmission can have as much and sometimes more impact than the project itself. For that reason, both project-specific transmission and transmission infrastructure must be depicted and evaluated for visual impact. While the PEIS acknowledges that the industrial-look of solar facilities within rural areas cannot be mitigated, the depiction of the potential solar development does not capture the extent of the visual impact, the value and character of the areas impacted, or address the expectation of people who come to the desert intending to see the desert. Both light and glint and glare were mentioned, but they should have been evaluated separately in terms of their visual impacts.

SOCIOECONOMICS

The PEIS evaluation of socioeconomic impacts examines jobs generation based on various solar technologies on BLM land. The encouragement of vast solar development on BLM lands directly impacts private lands, typically under the jurisdiction of the county, in the same general area. While this impact is not directly relevant to the PEIS, it is most certainly relevant to Riverside County and to the desert communities. The facilitation of renewable energy projects on BLM land directly impacts adjacent private land because it is common for additional land to be necessary to supplement BLM land for project siting and/or transmission. Secondly, because of the need for large areas of mitigation land and for mitigation for specific species and

Argonne National Laboratory
April 18, 2011
Page 3

habitats, there almost assuredly will be an impact to private lands as a result of the need to meet mitigation requirements. These two circumstances alone have the potential for severely impacting Riverside County and its future planning. Private lands that might have had a multitude of potential opportunities for economic development may simply be siting for solar plants or the stringing of transmission lines. As solar communities develop, will they go the way of the mining towns of the east once a better technology becomes more cost effective? Without proper planning, will essential services be precluded because there is not private land on which to build hospitals, fire stations, schools, or revenue generating businesses? What will be the long term impact on jobs and the economy? What will be the REAL socioeconomic cost of the renewable energy anticipated under this PEIS?

Thank you for the opportunity to provide comment on the Draft Solar Programmatic Environmental Impact Statement (PEIS) for Solar Energy Development in Six Southwestern States. If you have any questions, please feel free to contact Gail Barton, Principal Planner, at 951.955.6637.

Sincerely,

To Whom It May Concern,

Comments on the Supplement to the Draft Programmatic Environmental
Impact Statement for Solar Energy Development in Six Southwestern States

The Metropolitan Water District of Southern California (Metropolitan) has reviewed the Supplement to the Draft Programmatic Environmental Impact Statement (Supplement to the Draft PEIS) for Solar Energy Development in Six Southwestern States and Notice of Public Meetings (Project).¹ The U.S. Department of the Interior, Bureau of Land Management (BLM) and the U.S. Department of Energy (DOE) are working jointly as the lead agencies (collectively, Agencies) for the Project. The Agencies prepared the Supplement to the Draft PEIS to facilitate solar energy development in compliance with various orders, mandates and agency policies.

For the BLM, actions proposed in the Supplement to the Draft PEIS include the evaluation of a new Solar Energy Program applicable to multiple solar energy technologies at utility-scale over the next 20 years on BLM-administered lands in Arizona, California, Colorado, Nevada, New Mexico, and Utah where utility-scale solar development is defined as projects capable of generating 20 megawatts (MW) or greater of electricity that is delivered into the electricity transmission grid. The proposed Solar Energy Program will further the BLM's ability to meet the mandates of Executive Order 13212 and the Energy Policy Act of 2005 and has also been designed to meet the requirements of Secretarial Order 3285A1 (Secretary of the Interior 2010) related to identifying and prioritizing specific locations best-suited for utility-scale solar energy development on public lands. For the DOE, these actions include the evaluation of developing new program guidance relevant to DOE-supported solar energy projects. The National Environmental Policy Act (NEPA) analysis contained in the Supplement to the Draft PEIS will

¹ In 2008, Metropolitan commented on the Agencies' Notice of Intent to prepare the Programmatic Environmental Impact Statement to evaluate solar energy development. That comment letter is enclosed (Enclosure 1). On April 14, 2011 Metropolitan commented on the Draft Programmatic Environmental Impact Statement to evaluate solar energy development. That comment letter is also enclosed (Enclosure 2).

be used to the extent practicable to support future decisions; however, in some cases additional NEPA analysis may be necessary.

Metropolitan is pleased to submit these comments for consideration by BLM and DOE during the public comment period for the Supplement to the Draft PEIS. Metropolitan provides these comments to ensure that any potential impacts on its facilities in the vicinity of the Project and on Colorado River resources are adequately addressed.

Metropolitan incorporates by reference its comment letter submitted on the Draft PEIS on April 14, 2011 (Enclosure 2 to this letter).

BACKGROUND

Metropolitan is a public agency and regional water wholesaler comprising 26 member public agencies serving more than 19 million people in six counties in southern California. One of Metropolitan's major water supplies is the Colorado River via Metropolitan's Colorado River Aqueduct (CRA). Metropolitan holds an entitlement to water from the Colorado River. The CRA consists of tunnels, open canals, siphons and buried pipelines. CRA-related facilities also include pumping plants, above and below ground reservoirs and aquifers, spillways, access and patrol roads, communication facilities, and residential housing sites. The CRA, which can deliver up to 1.2 million acre-feet of water annually, extends 242 miles from the Colorado River, through the Mojave Desert and into the southern California coastal plain. Five pumping plants are located along the CRA, which consume approximately 2,500 gigawatt-hours of energy when the CRA is operating at full capacity. The CRA commenced delivery of Colorado River water to member agencies in 1941.

POTENTIAL IMPACTS ON METROPOLITAN'S WATER CONVEYANCE FACILITIES AND RIGHTS-OF-WAY

Metropolitan is concerned about the Project's potential impacts on its water conveyance facilities and rights-of-way that may be affected by the Project. Metropolitan owns extensive property in fee and easement along the CRA and its related facilities, including lands along the transmission system. Metropolitan is concerned with construction activities that could damage or limit access to our facilities and properties, dust or spills at construction sites that could impact water quality, changes in runoff patterns that could lead to erosion or overtopping of facilities, utility corridor activities that could impact local plants, animals and habitat in such a way as to impose restrictions on Metropolitan's operations and other direct and indirect effects to Metropolitan facilities. In order to avoid potential impacts, Metropolitan requested in its April 14, 2011 comment letter on the Draft PEIS that the Final PEIS include an assessment of potential impacts to Metropolitan's facilities with proposed measures to avoid or mitigate significant adverse effects, including those specified in Chapter 5 of the Draft PEIS.

The following comments concern specific Solar Energy Zones (SEZs) as described in the Supplement to the Draft PEIS:

Iron Mountain SEZ

On the basis of public comments received on the Draft PEIS and continued review of potential impacts identified in the Draft PEIS, the Iron Mountain SEZ has been eliminated from further consideration and will not be identified as an SEZ in applicable land use plans (See Appendix B, section B.2 to the Supplement). The potential impacts from solar development in the proposed Iron Mountain SEZ were considered sufficient reason to eliminate the area from further consideration as an SEZ. Metropolitan supports this decision.

Pisgah SEZ

The first sentence in lines 28-31 on page B-13 should be removed and inserted in the Riverside East SEZ in Section C.2.2.2 as Metropolitan did not previously provide comments on the Pisgah SEZ.

Riverside East SEZ

Proposed solar facilities in the Riverside East subarea could impact the following Metropolitan facilities:

- (1) The Eagle Mountain Pumping Plant (EMPP);
- (2) The CRA between the Coxcomb tunnel outlet and the EMPP;
- (3) The 230 kV line between the EMPP and Hinds Pumping Plant;
- (4) Portions of the CRA between Highway 62 and Interstate 10 west of Highway 177;
- (5) Portions of the 230 kV lines between Highway 62 and Interstate 10 west of Highway 177.

The proposed Riverside East SEZ has been reconfigured to eliminate 43,439 acres in the northwest portion of the SEZ (see Appendix C section C.2 to the Supplement and Figure C.2.2-2). This reconfiguration will greatly reduce, but not eliminate, the potential for impacts to the Metropolitan facilities listed above. Metropolitan supports the decision to eliminate 43,439 acres from the northwest portion of the SEZ and reiterates its concerns with the Draft PEIS regarding potential transmission connections to Metropolitan's transmission system.

Metropolitan provides the following specific comments about its concerns regarding potential impacts on its facilities and rights-of-way for the Agencies' consideration and incorporation into the Final PEIS and Record of Decision:

1. Metropolitan requests that the Final PEIS note that neither private nor public entities have any entitlements to build over Metropolitan's fee-owned rights-of-way or properties, including CRA spillways.

2. Metropolitan's facilities and fee-owned or permanent easement rights-of-way should be considered in planning and in the Final PEIS, and the potential impacts that may occur due to implementation of the Project or future projects that tier off the Final PEIS.
3. Any new facilities arising out of the Project should not impact accessibility to, or impede the use of, Metropolitan's facilities and properties, or impact its operations, including the CRA system and the local airfields, as shown in Enclosure 3.
4. Metropolitan is concerned with potential impacts to its facilities and properties associated from any future excavation, pumping, construction, utilities or any development that may result from implementation of the proposed Project.
5. Development associated with the proposed Project must not restrict any of Metropolitan's day-to-day operations and/or access to its facilities and properties.
6. Metropolitan must be allowed to maintain its rights-of-way and requires unobstructed access to our facilities and properties at all times in order to repair, maintain or replace our system.
7. In order to avoid potential conflicts with Metropolitan's rights-of-way, Metropolitan requires that any design and mitigation plans for any activity in the area of Metropolitan's open canals, pipelines, tunnels, spillways, transmission lines and towers, or facilities be submitted for our review and written approval. Approval of any project where it could impact Metropolitan's facilities or property should be contingent on Metropolitan's approval of design and mitigation plans for the project.
8. Detailed prints of drawings of Metropolitan's pipelines and rights-of-way may be obtained by calling Metropolitan's Substructures Information Line at (213) 217-6564.
9. To assist in preparing plans that are compatible with Metropolitan's facilities, easements and properties, we have enclosed a copy of the "Guidelines for Developments in the Area of Facilities, Fee Properties, and/or Easements of The Metropolitan Water District of Southern California" (Enclosure 4).
10. All submitted designs or plans must clearly identify Metropolitan's facilities, properties and rights-of-way.

COLORADO RIVER RESOURCES

With respect to Colorado River resources, Metropolitan has the following comments in addition to those set forth in Metropolitan's April 14, 2011 (Enclosure 2):

January 26, 2012

1. Line 44 on page C-43 of the Supplement to the Draft PEIS refers to the “East Highland Canal”. Based on the text at line 9 on page 9.1-78 of the December 2010 Draft PEIS, please revise the name of the canal to the “East Highline Canal” in the Final PEIS.
2. Line 12 on page C-63 of the Supplement to the Draft PEIS refers to “Assessing the potential for drawdown impacts on the Colorado River Accounting Surface”. Please revise that text to refer to “Assessing the potential for drawdown impacts to affect whether the static water elevation of a well is above, near, or below the Colorado River Accounting Surface”. Wells that have a static water-level elevation near, equal to, or below the accounting surface are presumed to yield water that will be replaced by water from the Colorado River. (U.S. Geological Survey Scientific Investigations Report 2008-5113, page 6).
3. Line 14 on page C-63 of the Supplement to the Draft PEIS refers to “Coordinating with the U.S. Bureau of Reclamation (managing agency of Colorado River Act) regarding results and implications”. Please revise that text to refer to “Coordinating with the U.S. Bureau of Reclamation (agency responsible for administering the U.S. Supreme Court decree in *Arizona v. California*, 547 U.S. 150 [2006]) regarding results and implications”. Article I.(C) of the decree provides that “Consumptive use from the mainstream within a State shall include all consumptive uses of water of the mainstream, including water drawn from the mainstream by underground pumping....” (Bureau of Reclamation, “The Colorado River Documents 2008”, page A-64).
4. Line 18 on page C-63 of the Supplement to the Draft PEIS begins with the text “Assessing”. Please revise that text to the word “Assessing”.

We appreciate the opportunity to provide input to your planning process and we look forward to receiving future environmental and related documentation on this project. If we can be of further assistance, please contact Mr. Michael Melanson at (916) 217-6319.

Very truly yours,

Deirdre West

Solar Energy PEIS Scoping
Argonne National Laboratory
9700 S. Cass Avenue, EVS/900
Argonne, IL 60439

Dear Sir or Madam:

Notice of Intent to Prepare a
Programmatic Environmental Impact Statement to Evaluate Solar Energy Development,
Develop and Implement Agency-Specific Programs, Conduct Public Scoping Meetings,
Amend Relevant Agency Land Use Plans, and Provide Notice of Proposed Planning Criteria

The Metropolitan Water District of Southern California (Metropolitan) has reviewed the above referenced Notice of Intent to prepare a Programmatic Environmental Impact Statement (PEIS). The proposed PEIS would establish agency-wide solar energy programs and additional related policy. More specifically, the PEIS will evaluate different management strategies to find the best approach for agencies to use when considering approval of proposed solar energy projects on Bureau of Land Management (BLM) managed public land located in the states of Arizona, California, Colorado, New Mexico, and Utah. The Department of Energy (DOE), the U.S. Department of Interior (DOI), and the Bureau of Land Management (BLM) (collectively, Agencies) are the lead agencies for the PEIS. Metropolitan is pleased to submit these comments for the Agencies' consideration in preparing the PEIS.

Metropolitan currently has a significant number of facilities, real estate interests, and fee-owned rights-of-way, easements, and other properties (Facilities) located on or near BLM-managed land in southern California that are part of our supplemental water distribution system. Metropolitan is concerned with potential direct or indirect impacts that may result from the construction and operation of any proposed solar energy project on or near our Facilities. In order to avoid potential impacts, we request that the PEIS include a requirement that all applications for development of solar energy projects on BLM-managed land located on or near Metropolitan Facilities include an assessment of potential impacts to Metropolitan's Facilities with proposed measures to avoid or mitigate significant adverse effects. Metropolitan's specific concerns of potential impacts to Metropolitan Facilities are discussed below.

Background

Metropolitan is a public agency and a regional water wholesaler. It is governed by a 37-member Board of Directors representing 26 member public agencies serving more than 18 million people in six counties in Southern California. One of Metropolitan's major water supplies is the Colorado River via Metropolitan's Colorado River Aqueduct (CRA). The CRA consists of tunnels, open canals, and buried pipelines. CRA-related facilities also include above and below ground reservoirs and aquifers, access and patrol roads, communication facilities, and residential housing sites. The CRA, which can deliver up to 1.2 million acre-feet of water annually, extends 242 miles from the Colorado River, through the Mojave Desert and into the Los Angeles basin. Metropolitan has five pumping plants located along the CRA, which consume approximately 2,400 gigawatt-hours of energy when the CRA is operating at full capacity.

Concurrent with its construction of the CRA in the mid-1930s, Metropolitan constructed 305 miles of 230 kV transmission lines that run from the Mead Substation in Southern Nevada, head south, then branch east to Parker, California, and then west along Metropolitan's CRA. The transmission lines were built for the sole and exclusive purpose of supplying power from the Hoover and Parker power plants on the Colorado River to the five pumping plants along the CRA.

Metropolitan's ownership and operation of the CRA and its 230 kV transmission system is vital to its mission to provide Metropolitan's 5,200 square miles service area with adequate and reliable supplies of high-quality water to meet present and future needs in an environmentally and economically responsible way. This core function, together with certain proposed solar energy projects near Metropolitan's CRA, its transmission facilities, or both, form the basis for Metropolitan's comments herein.

Land Use Issues: Potential Impacts on Metropolitan Facilities

Metropolitan owns extensive property in fee and easement along the CRA and its related Facilities, including Metropolitan's transmission system. Metropolitan below identifies its specific concerns regarding potential impacts on its Facilities for the Agencies' consideration and incorporation into the PEIS:

1. Metropolitan requests that the PEIS state that neither private nor public entities have any entitlements to build over Metropolitan's Facilities.
2. Metropolitan's Facilities should be considered in planning and in the PEIS, and any projects should avoid potential direct and indirect impacts that may occur due to implementation of the Project.
3. Any new facilities arising out of any projects should not impact accessibility to existing Metropolitan Facilities or impede the use of existing Metropolitan Facilities, including the CRA system.

4. Metropolitan is concerned with potential impacts to its Facilities associated from any future excavation, construction, utilities or any development that may result from implementation of any projects.

5. Development associated with any projects must not restrict any of Metropolitan's day-to-day operations and/or access to its Facilities.

6. Metropolitan must be allowed to maintain its rights-of-way and requires unobstructed access to our Facilities at all times in order to repair and maintain our system.

7. In order to avoid potential conflicts with Metropolitan's Facilities, Metropolitan requires that any design plans for any activity in the area of Metropolitan's Facilities be submitted for our review and written approval. Approval of any project where it could impact Metropolitan's property should be contingent on Metropolitan's approval of design plans for that project.

8. All submitted project designs or plans must clearly identify Metropolitan's Facilities.

9. A project shall not rely on Metropolitan's Facilities for mitigation of significant impacts caused by that project.

Land Use Issues: Potential Impacts on Metropolitan's Electrical Transmission System

Metropolitan is concerned that locating solar projects near or across its electrical transmission system could have an adverse impact on Metropolitan's electric transmission-related operations and Facilities. From a reliability and safety aspect, Metropolitan is concerned with development of any proposed projects and supporting transmission systems that would cross or come in close proximity with Metropolitan's transmission system, and accordingly provides the following specific comments on this topic for the Agencies' consideration and incorporation into the PEIS:

1. Metropolitan could be adversely impacted in meeting its water delivery obligations if the development of any projects would: (1) require the de-energization of a portion or all of Metropolitan's electric system; or (2) cause any disruption of Metropolitan's electric system. Any projects should be designed to avoid such impacts.

2. Any project should not plan to interconnect to Metropolitan's transmission system as its transmission capacity is fully subscribed. Moreover, such interconnection could compromise Metropolitan's ability to reliably operate the CRA. Instead, projects should be required to identify how they will interconnect to an alternate transmission line or system.

Environmental Issues

Metropolitan also has concerns regarding potential environmental impacts of the solar projects, including impacts to water resources or impacts from the siting of any projects across or in close proximity of its Facilities. Metropolitan provides the following specific comments on potential environmental issues for the Agencies' consideration and incorporation into the PEIS:

1. To the extent the projects require water resources, projects may not rely upon Metropolitan's CRA or other Facilities as a direct source of water, and must identify the source and adequacy of an alternate water supply. The PEIS should address potential impacts to water supplies and resources, including the potential for surface and/or groundwater depletion, and how the projects will mitigate for any such impacts.

2. Any project should not compromise water quality standards or increase the potential of degradation to water quality from chemicals entering subsurface water tables.

3. Any project should not increase the potential of degradation to water quality from new pipelines carrying hazardous material.

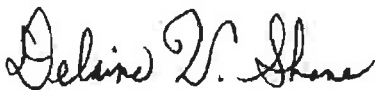

4. Hazardous material pipelines, if any, should be placed underground when they cross the CRA.

5. Any change in flow or drainage from new facilities should not cause erosion, subsidence, or damage to Metropolitan's Facilities.

6. Any project must not adversely affect any of Metropolitan's projects, including Hayfield Groundwater Storage and Recharge Project located south of the CRA near the Hinds Pumping Plant.

We appreciate the opportunity to provide input to your planning process and we look forward to receiving future environmental and related documentation on this Project. If we can be of further assistance, please contact Raeanne Murphy at (213) 217-6319.

Very truly yours,

Delaine W. Shane
Manager, Environmental Planning Team

Solar Energy Draft Programmatic EIS
Argonne National Laboratory
9700 S. Cass Avenue—EVS/240
Argonne, Illinois 60439

To Whom It May Concern:

Comments on the Draft Programmatic Environmental Impact Statement
for Solar Energy Development in Six Southwestern States

The Metropolitan Water District of Southern California (Metropolitan) has reviewed the Draft Programmatic Environmental Impact Statement (Draft PEIS) for Solar Energy Development in Six Southwestern States and Notice of Public Meetings (Project).¹ The U.S. Department of the Interior, Bureau of Land Management (BLM) and the U.S. Department of Energy (DOE) are working jointly as the lead agencies (collectively, Agencies) for the Project. The Agencies prepared the Draft PEIS to facilitate solar energy development in compliance with various orders, mandates and agency policies.

For the BLM, actions proposed in the Draft PEIS include the evaluation of a new Solar Energy Program applicable to multiple solar energy technologies at utility-scale over the next 20 years on BLM-administered lands in Arizona, California, Colorado, Nevada, New Mexico, and Utah where utility-scale solar development is defined as projects capable of generating 20 megawatts (MW) or greater of electricity that is delivered into the electricity transmission grid. The proposed Solar Energy Program will further the BLM's ability to meet the mandates of Executive Order 13212 and the Energy Policy Act of 2005 and has also been designed to meet the requirements of Secretarial Order 3285A1 (Secretary of the Interior 2010) related to identifying and prioritizing specific locations best-suited for utility-scale solar energy development on public lands. For the DOE, these actions include the evaluation of developing new program guidance relevant to DOE-supported solar energy projects. The National Environmental Policy Act (NEPA) analysis contained in the Draft PEIS will be used to the extent practicable to support future decisions; however, in some cases additional NEPA analysis may be necessary.

¹ In 2008, Metropolitan commented on the Agencies' Notice of Intent to prepare the Programmatic Environmental Impact Statement to evaluate solar energy development. That comment letter is enclosed (Enclosure 1).

Metropolitan is pleased to submit comments for consideration by BLM and DOE during the public comment period for the Draft PEIS. In sum, Metropolitan provides these comments to ensure that any potential impacts on its facilities in the vicinity of the Project and on Colorado River resources are adequately addressed. Because the Draft PEIS is evaluating the new Solar Energy Program at a programmatic level, information on specific project locations or corridors are not considered in this document. Without specific information, Metropolitan cannot determine specific impacts to its facilities and rights-of-way. Therefore, our comments at this time will be of a general nature, focusing on Metropolitan's general service system needs, concerns and issues.

BACKGROUND

Metropolitan is a public agency and regional water wholesaler comprising 26 member public agencies serving more than 19 million people in six counties in southern California. One of Metropolitan's major water supplies is the Colorado River via Metropolitan's Colorado River Aqueduct (CRA). Metropolitan holds an entitlement to water from the Colorado River. The CRA consists of tunnels, open canals, siphons and buried pipelines. CRA-related facilities also include pumping plants, above and below ground reservoirs and aquifers, spillways, access and patrol roads, communication facilities, and residential housing sites. The CRA, which can deliver up to 1.2 million acre-feet of water annually, extends 242 miles from the Colorado River, through the Mojave Desert and into the southern California coastal plain. Five pumping plants are located along the CRA, which consume approximately 2,500 gigawatt-hours of energy when the CRA is operating at full capacity. The CRA commenced delivery of Colorado River water to member agencies in 1941.

Metropolitan's Colorado River Aqueduct Transmission System (CRATS)

Metropolitan constructed the CRA in the 1930s, starting near the newly completed Parker Dam, through remote areas of the Mojave Desert in Riverside and San Bernardino counties and terminating near the city of Riverside. As mentioned above, five large pumping plants, whose total electrical demand is around 300 MW, were built along the CRA. Due to the remoteness of the area, there was no existing electrical infrastructure to transport and supply the large amount of power required by these pumps. Therefore, Metropolitan constructed a 230 kV transmission system to bring power from the Hoover and Parker Dam power plants to its five pumping plants.

The sole use and purpose of the CRATS was to deliver power to its remote pumping loads. The CRA pumps are basically tied directly to the CRATS, using a main and transfer bus configuration. There is no redundant transmission path to these loads, and the pumping plants must operate in a synchronized fashion. The CRATS was designed essentially as a pumping load tie, not as part of a larger grid system whose purpose is to move large amounts of power from distant generation sources to the load of population centers.

The CRATS currently lies within the California Independent System Operator (CAISO) Balancing Authority Area as a result of a 30-year, complex integration contract with Southern California Edison (SCE) that expires in 2017, under which SCE had performed control area

responsibilities for the CRATS. When SCE joined the CAISO in 1998, its former control area responsibilities were transferred to the CAISO. The CRATS is not part of the ISO Controlled Grid since Metropolitan, its owner, is not a CAISO Participating Transmission Owner.

The water that Metropolitan transports through the CRA is critical to the population and economy of southern California. Metropolitan was created in 1928 for the purpose of supplying the area within its boundaries with water for domestic, industrial and other beneficial uses, and incidentally to provide a means of creating a water supply for such surrounding areas as later may find it advantageous to join the District. Its first objective was the construction of the CRA and a distribution system leading to its member agencies in southern California. Historically, Metropolitan has supplied approximately one half of the total water used by the businesses, industries and 19 million residents of this region, and over 50 percent of that water has come from the CRA. To satisfy such water demands, the CRA must be operated on a near continuous basis. In some years Metropolitan has operated the CRA at maximum flow for the entire year, consumptively using 1.3 million acre-feet of Colorado River water. In other years, the CRA has been shut down briefly to perform scheduled maintenance even during the summer months, when the water supply requirements were met by other resources. Such shutdowns require extensive advance coordination and planning with Metropolitan's 26 member agencies to ensure they can continue to provide reliable water delivery to their wholesale and retail customers. Essentially, the CRA and its supporting transmission system operate on a schedule dictated by water supply requirements, not electrical considerations.

As the electric grid has developed around the CRA, Metropolitan has had to increase the complexity and capability of the protection devices on the CRATS and at the pumping plants. With the potential for higher capacity and voltage transmission lines interconnected to the CRATS or incorporated into it as contemplated by some of the potential PEIS projects, Metropolitan is very concerned about its ability to protect the pumping plants from disruption and the potential incompatibilities of the power and water conveyance missions. Metropolitan's core mission is the supply of water to southern California, and it believes potential transmission network changes to its system could impair that mission.

As explained above, the CRATS is not used as a typical transmission line nor is the CRA pump load a typical utility load. The CRA's physical dimensions limit the amount of water that can be conveyed and hence the amount of power needed to convey the water. The maximum load of the CRA is approximately 300 MW and that limit will not increase. There is no load growth potential on the CRA, so increasing the capability of the CRATS is not a benefit to Metropolitan. Also, Metropolitan has completed a condition assessment of the CRATS. The results indicate a 70 year-old transmission system with little degradation and the potential to last many more years under the same or similar loading conditions. Operating the CRATS at levels below its maximum capabilities and in a benign environment has resulted in a fully amortized system with little or no need to replace or upgrade equipment.

Metropolitan Stakeholder Involvement in State Initiatives or Plans to Support Transmission and Renewable Development Efforts

Metropolitan is an active stakeholder in the California planning activities described in Appendix D.3.2 and D.3.3 of the PEIS:

- Renewable Energy Transmission Initiative (RETI), and
- California Transmission Planning Group (CTPG).

Metropolitan submitted comments to these California planning efforts with concerns of interconnecting large scale renewable energy projects to the CRATS. Metropolitan requested several RETI and CTPG proposed solar generation connections to its CRATS be modified such that they would connect to SCE's system instead, which is designed or planned to transmit large amounts of renewable energy directly to their load centers. SCE has proposed large collector stations near the CRATS, such as the Red Bluff 500kV and Colorado River 500kV substations. Copies of Metropolitan comments are enclosed for reference and incorporated hereto (Enclosures 2a and 2b).

Some of these proposed SCE collector stations and transmission lines are listed in the RETI, CTPG reports, CAISO transmission plans, as well as in SCE's and Western Electricity Coordinating Council's (WECC's) Annual Progress Reports.

POTENTIAL IMPACTS TO METROPOLITAN'S ELECTRICAL TRANSMISSION SYSTEM

Metropolitan is concerned about potential impacts from the Project on its transmission system and related facilities. Metropolitan is concerned that locating utility-scale solar energy facilities or supporting linear infrastructure near or across its electrical transmission system could have a negative impact on Metropolitan's operations, facilities and rights-of-way. Although the Draft PEIS does not yet identify any specific direct impacts, the proposed lands available for application under both the Solar Development Program alternative and the Solar Energy Zone (SEZ) Program alternative would include or be directly adjacent to Metropolitan's facilities and property. Enclosure 3 is a map showing Metropolitan's facilities and rights-of-way juxtaposed with the proposed lands identified in the Draft PEIS. Metropolitan is also concerned that supporting linear infrastructure, not identified in the Draft PEIS, such as roads, transmission lines, and natural gas or water pipelines which could be sited outside of these designated areas could adversely affect Metropolitan facilities and rights-of-way.

The Draft PEIS assumes access to existing 230 kV lines, presumably Metropolitan's. An example of this assumption is stated on page 9.2-4: "For the analysis in this PEIS, it was assumed that the existing 230-kV transmission line that runs north-south through the western portion of the SEZ could provide access to the transmission grid, and thus no additional acreage disturbance for transmission line access was assessed. Access to the transmission line was assumed, without additional information on whether this line would be available for connection of future solar facilities." Any Project should not plan to interconnect to the CRATS as its transmission capacity is fully subscribed. Moreover, such interconnection could compromise

Metropolitan's ability to reliably operate the CRA. Instead, the Final PEIS should identify how the electricity from the SEZ or Projects will interconnect to alternate transmission lines or systems.

Summary of Transmission and Interconnection Implications to Metropolitan in the Draft PEIS

Metropolitan has reviewed sections of the Draft PEIS that could directly affect the CRATS and the reliability of Metropolitan's CRA pumping operations. The following is a summary of Metropolitan's concerns which are described in more detail below:

1. Proposed use and connection to Metropolitan's 230kV transmission system or CRATS,
2. Potential use of Metropolitan owned land for interconnections at its pumping plant substations,
3. Iron Mountain SEZ assumptions to connect to and use a 230kV line, presumably Metropolitan's, and
4. Riverside East SEZ assumptions to connect to and use a 230kV line, presumably Metropolitan's.

General Concerns Regarding Transmission and Interconnection Implications to Metropolitan in the Draft PEIS

Metropolitan has numerous technical concerns with large scale interconnection of solar plants to the CRATS, which could affect Metropolitan's mission to provide water to the 19 million residents of southern California.

From a reliability and safety aspect, Metropolitan is concerned with projects that may be developed within the designated solar development areas or with linear projects (transmission lines, roads, etc.) that may be developed within or outside of these areas that would cross or come in close proximity to Metropolitan's transmission system. Metropolitan requests that the Final PEIS analyze and assess any potential impacts to Metropolitan's transmission system including but not limited to:

- A. Metropolitan could be adversely impacted in meeting its water delivery requirements if development of the proposed lands available for utility-scale solar energy development rights-of-way applications would: (1) require de-energization of a portion or all of Metropolitan's electric system; or (2) cause any disruption of Metropolitan's electric system. The Project or any future projects that tier off the Final PEIS and Record of Decision should be designed to avoid such impacts.
- B. Any designation of solar development areas or SEZs should not lessen or remove the Agencies' responsibility to ensure that any ensuing projects do not cause physical damage to, frustrate or interfere with Metropolitan's operation of its facilities. We suggest that the Agencies discharge this responsibility by requiring future project proponents' compliance with (1) prudent energy utility practice; (2) Metropolitan's

engineering and construction requirements; (3) WECC and North American Electric Reliability Corporation (NERC) reliability standards; and (4) applicable transmission planning processes.

- C. Any new facilities resulting from the Project should not increase Metropolitan's cost or responsibilities in meeting WECC/NERC reliability requirements without appropriate compensation.
- D. Any new facilities resulting from the Project should not impede or increase the cost of any maintenance activities required on Metropolitan's CRA and related transmission lines, including local airfields.
- E. To the extent necessary, cathodic and grounding protection should be provided by any new transmission lines to protect Metropolitan's existing infrastructure, including fencing already in or near Metropolitan's rights of way.
- F. Any new facilities resulting from the Project that may cross Metropolitan's 230 kV transmission system must be designed and installed with properly functioning safety systems to preclude interference or impact to Metropolitan's 230 kV transmission system.

Specific Concerns Regarding Transmission and Interconnection Implications to Metropolitan in the Draft PEIS

Metropolitan has concerns with the following excerpts identified below from Chapter 9, *Affected Environment and Impact Assessment for Proposed Solar Energy Zones in California*:

Iron Mountain SEZ

1. Lines 42-46 on page 9.2-3 of Section 9.2.1.2 describe the following:

A 230kV transmission line which appears to be Metropolitan's.

The Draft PEIS correctly states that the capacity of the 230kV line would be inadequate for 9,469 to 17,043 MW of new capacity in this SEZ. It further mentions substantial new transmission and/or upgrades of existing transmission lines would be required to bring electricity from the SEZ to load centers; however it states that at this time the location and size of such new transmission facilities are unknown.

With this reference, Metropolitan is concerned that the Draft PEIS clearly indicates the existing 230kV line is inadequate to handle the new generating capacity identified in the Iron Mountain SEZ, then in item 2, ignores this limitation and assumes the transmission line would provide access to the grid.

2. Lines 11-15 of page 9.2-4 state:

"For the analysis in this PEIS, it was assumed that the existing 230kV transmission line that runs north-south through the western portion of the SEZ could provide access to the transmission grid, and thus no additional acreage disturbance for

transmission line access was assessed. Access to the transmission line was assumed, without additional information on whether this line would be available for connection of future solar facilities.”

The Agencies should not assume that the 230kV transmission line in the Iron Mountain SEZ is available for interconnection and these assumptions should be removed from the Final PEIS.

Metropolitan is also concerned that with this reference the Draft PEIS ignores the need to include or assess additional acreage for transmission lines and interconnections in the Iron Mountain SEZ.

Riverside East SEZ

3. Lines 6-13 on page 9.4-3 and lines 9-10 on page 9.4-25 mentions a 230kV to the west of the Riverside East SEZ which appears to be Metropolitan's.

With respect to this reference, like Item 1 above, Metropolitan is concerned with the assumed use of a 230kV line, presumably Metropolitan's, on the west edge of the Riverside SEZ. The Draft PEIS mentions a potential of 18,035 MW to 32,463 MW of new solar capacity, depending on the solar technology, which is far in excess of any capacity available on the identified 230 kV line. Although the Draft PEIS also mentions assumed connections to a 500kV and 69kV in this SEZ, it ignores the impacts of the substantial amount of transmission that would be necessary to interconnect the proposed new solar capacity to the grid.

As noted above, the Agencies should not assume that the 230kV transmission line in the west edge of the Riverside East SEZ is available for interconnection and these assumptions should be removed from the Final PEIS.

Metropolitan notes, there are other 161kV, 230kV, and 500kV substations and transmission lines in the region, that either exist or are planned, to bring renewable generation to load centers which are not discussed in these reports. As mentioned above, some of these projects are listed in the RETI and CTPG reports, CAISO transmission plans, and SCE and WECC's Annual Progress Reports.

As explained above, Metropolitan wishes to highlight its concern regarding inclusion of potential transmission connections directly affecting CRATS in the Draft PEIS. Metropolitan's concerns are based on the function and unique nature of the CRATS, which was built solely for water conveyance purposes. Metropolitan suggests the Final PEIS incorporate more interconnections, right-of-ways, roads, etc., to existing or planned investor owned utility transmission lines.

POTENTIAL IMPACTS ON METROPOLITAN'S WATER CONVEYANCE FACILITIES AND RIGHTS-OF-WAY

Metropolitan is also concerned about the Project's potential impacts on its water conveyance facilities and rights-of-way that may be affected by the Project. Metropolitan owns extensive

property in fee and easement along the CRA and its related facilities, including lands along the transmission system. Metropolitan is concerned with construction activities that could damage or limit access to our facilities, dust or spills at construction sites that could impact water quality, changes in runoff patterns that could lead to erosion or overtopping of facilities, utility corridor activities that could impact local plants, animals and habitat in such a way as to impose restrictions on Metropolitan's operations and other direct and indirect effects to Metropolitan facilities. In order to avoid potential impacts, Metropolitan requests that the Final PEIS include an assessment of potential impacts to Metropolitan's facilities with proposed measures to avoid or mitigate significant adverse effects, including those specified in Chapter 5 of the Draft PEIS.

Proposed solar facilities in the Iron Mountain subarea could impact the following Metropolitan facilities:

- (1) The CRA between Rice and the Iron Mountain Pumping Plant;
- (2) The CRA between the Coxcomb Tunnel Outlet and the Eagle Mountain Pumping Plant (EMPP);
- (3) The 230 kV lines between Iron Mountain and Hinds Pumping Plant;
- (4) Several CRA water spillways (wasteways) including Iron Mountain reservoir and radial gate, Eagle Mountain reservoir, Coxcomb tunnel inlet, and Rice.

Proposed solar facilities in the Riverside East subarea could impact the following Metropolitan facilities:

- (1) The EMPP;
- (2) The CRA between the Coxcomb tunnel outlet and the EMPP;
- (3) The 230 kV lines between the EMPP and Hinds Pumping Plant;
- (4) Portions of the CRA between Highway 62 and Interstate 10 west of Highway 177;
- (5) Portions of the 230 kV lines between Highway 62 and Interstate 10 west of Highway 177.

Metropolitan provides the following specific comments about its concerns regarding potential impacts on its facilities and rights-of-way for the Agencies' consideration and incorporation into the Final PEIS and Record of Decision:

1. Metropolitan requests that the Final PEIS note that neither private nor public entities have any entitlements to build over Metropolitan's fee-owned rights-of-way or properties, including CRA spillways.
2. Metropolitan's facilities and fee-owned or permanent easement rights-of-way should be considered in planning and in the Final PEIS, and the potential impacts that may occur due to implementation of the Project or future projects that tier off the Final PEIS.
3. Any new facilities arising out of the Project should not impact accessibility to existing facilities or impede the use of existing facilities, including the CRA system and the local airfields, as shown in Enclosure 3.

4. Metropolitan is concerned with potential impacts to its facilities associated from any future excavation, construction, utilities or any development that may result from implementation of the proposed Project.
5. Development associated with the proposed Project must not restrict any of Metropolitan's day-to-day operations and/or access to its facilities
6. Metropolitan must be allowed to maintain its rights-of-way and requires unobstructed access to our facilities and properties at all times in order to repair, maintain or replace our system.
7. In order to avoid potential conflicts with Metropolitan's rights-of-way, Metropolitan requires that any design and mitigation plans for any activity in the area of Metropolitan's open canals, pipelines, tunnels, spillways or facilities be submitted for our review and written approval. Approval of any project where it could impact Metropolitan's property should be contingent on Metropolitan's approval of design and mitigation plans for the project.
8. Detailed prints of drawings of Metropolitan's pipelines and rights-of-way may be obtained by calling Metropolitan's Substructures Information Line at (213) 217-6564.
9. To assist in preparing plans that are compatible with Metropolitan's facilities, easements and properties, we have enclosed a copy of the "Guidelines for Developments in the Area of Facilities, Fee Properties, and/or Easements of The Metropolitan Water District of Southern California" (Enclosure 4).
10. All submitted designs or plans must clearly identify Metropolitan's facilities and rights-of-way.

WATER RESOURCES: POTENTIAL IMPACTS ON WATER SUPPLIES

Metropolitan is pleased that the Agencies recognize that: "The use of groundwater in the Chuckwalla Valley and Palo Verde Mesa should be planned for and monitored in cooperation with the BOR and the USGS in reference to the Colorado River Accounting Surface and the rules set forth in the Law of the River." (Draft PEIS at page 9.4-9.) As indicated above, Metropolitan holds an entitlement to water supplies from the Colorado River. Metropolitan notes that the Agencies correctly indicate that: "The Colorado River is managed by an assemblage of compacts, federal laws, court decrees, and contracts that form the 'Law of the River.'" (Draft PEIS at page 4-50.) With water from the Colorado River being allocated pursuant to federal law and being managed by the Department of the Interior, Bureau of Reclamation (BOR), a party must have an entitlement to lawfully use Colorado River water (Boulder Canyon Project Act of 1928, 43 U.S.C. §§ 1501, *et seq.*; *Arizona v. California*, 547 U.S. 150 (2006).)

To the extent the Project or any future project that may tier off the Final PEIS and any future Record of Decision uses Colorado River water, it must have a documented right to do so. To assist the Agencies in more accurately describing the Affected Environment and Impact Assessment in the Final PEIS, Metropolitan has provided detailed comments on the portions of a number of Chapters of the Draft PEIS related to California's Colorado River water resources as Enclosures 5 and 6.

Entities in California are currently using or creating Intentionally Created Surplus and are projected in the future to use or create Intentionally Created Surplus with all of California's apportionment of Colorado River water. "Intentionally Created Surplus" is surplus Colorado River system water available for use under the terms and conditions of a Delivery Agreement with the Bureau of Reclamation, a Forbearance Agreement and the 2007 Interim Guidelines for the Operation of Lake Powell and Lake Mead. Project proponents would have to obtain water from existing contract holders for uses within the contract holder's service area. For Colorado River uses outside contract holders' service areas, Metropolitan is willing to discuss the transfer or exchange of a portion of its Colorado River water supply subject to any required approvals and so long as the project proponent agrees to provide Metropolitan with a replacement water supply. Proponents must fully address the impacts on Colorado River water resources and provide full mitigation for such impacts.

Metropolitan notes that the Draft PEIS indicates that: "Groundwater surface elevations are routinely monitored in the Chuckwalla Valley and Palo Verde Mesa as a part of the methodology used to determine groundwater that is replenished by Colorado River water, as outlined in the 2006 consolidated decree of the U.S. Supreme Court (*Arizona v. California* 2006)." (Draft PEIS at page 9.4-68.) Metropolitan recognizes that a potentially applicable mitigation measure specified in the draft PEIS is:

Project developers who plan to use groundwater should develop and implement a groundwater Water Resources Monitoring and Mitigation Plan, which includes monitoring the effects of groundwater withdrawal for project uses, of vegetation restoration and dust control uses during decommissioning, and of aquifer recovery after project decommissioning. Monitoring frequency should be decided on a site-specific basis and in coordination with federal, state, and local agencies that manage the groundwater resources of the region.

(Draft PEIS at page 5-50.)

Metropolitan proposes that as a mitigation measure, any project arising from the Final PEIS and any future Record of Decision which utilizes groundwater from one or more wells which pump water from above, at, or below the Colorado River Accounting Surface annually report the static water levels in each of the project's production wells at least annually for Colorado River water use accounting purposes, or more frequently if required by BOR. Metropolitan requests that the report reference either the current Colorado River Accounting Surface or a valid accounting surface methodology set forth in future legislation, rule-making, policy, procedure, or applicable

judicial determination, and that Metropolitan receive copies of these reports and all relevant groundwater monitoring data, if requested.

POTENTIAL ENVIRONMENTAL IMPACTS

Metropolitan is also concerned about any potential environmental impacts from siting of the proposed solar developments across or in close proximity to its facilities and rights-of-way. Metropolitan provides the following specific comments on potential environmental issues for the Agencies' consideration and incorporation into the Final PEIS:

1. The Project should not increase the potential harm to water quality from chemicals entering subsurface water tables as has been seen with hexavalent chromium (or Chromium 6) from natural gas pumping plants, liquid petroleum or hydrogen pumping plants.
2. The Project should not increase the potential to harm water quality from new pipelines carrying hazardous material.
3. Hazardous material pipelines, if any, should be placed underground when they cross the CRA.
4. Any change in flow or drainage from new facilities should not cause erosion or damage to Metropolitan's facilities or rights-of-way (i.e. aqueduct, transmission tower footings, roads, fencing, spillways and other surface facilities or rights-of-way).
5. The Project must not adversely affect Metropolitan's Hayfield Groundwater Storage and Recharge Project that is located south of the CRA near the Hinds Pumping Plant.
6. The Final PEIS also needs to take into account cumulative effects of the Project on Metropolitan's facilities, properties, and rights-of-way, both in the various phases of installations and taking into consideration the various types of uses on the proposed lands evaluated in the Draft PEIS.

The Draft PEIS makes numerous references to the potential for the CRA to provide viable habitat for wildlife, including waterfowl and shorebird species (pages 8.1-89, 9.2-106, 9.4-121 and others), amphibians (pages 9.2-11 and 9.2-84 and 9.4-96 and others) fish (9.4-135 and others) and other aquatic organisms (page 9.4-136) and special status species (9.4-140). It should be noted that the CRA is not a playa wetland habitat as noted on page 9.4-95. The CRA does not provide viable habitat for birds, amphibians, fish or other aquatic organisms, and thus, these remarks in the Draft PEIS should be removed in the final PEIS. The CRA is a concrete lined canal that runs on the surface as well as into subsurface pipelines and siphons, and conveys fast moving drinking water supplies, and thus, does not provide viable habitat.

On page 9.4-57 of the Draft PEIS, reference is made to levees channeling runoff to the CRA. This is an inaccurate statement. The levees referred to here are the V-dikes that provide flood protection for the CRA. The V-dikes channel water away from the open canal segments of the CRA to the larger washes beneath which the CRA crosses by means of inverted siphons. No floodwater or other surface runoff is ever channeled into the CRA.

POTENTIAL SOCIOECONOMIC IMPACTS

Finally, the Final PEIS should assess the socioeconomic impacts of any avoidable impacts on Metropolitan's and its member agencies' operations, including any financial or Metropolitan rate payer impacts arising out of the Project, for example, any costs due to potential interruptions of service and any costs resulting from required transmission upgrades or interconnections.

* * *

We appreciate the opportunity to provide input to your planning process and we look forward to receiving future environmental and related documentation on this project. If we can be of further assistance, please contact Dr. Debbie Drezner at (213) 217-5687.

Very truly yours,

John Shamma
Manager, Environmental Planning Team

Sacramento, CA 95814-5512

Renewable Energy Transmission Initiative (RETI) Phase 2A Draft Report

Dear Ms. Gallardo:

The Metropolitan Water District of Southern California (Metropolitan) is pleased to provide the following comments on the RETI Phase 2A Draft Report (Draft Report). On May 10, 2009, Metropolitan submitted initial comments expressing concern regarding RETI's potential impact to Metropolitan transmission facilities by email to RETI Stakeholder Steering Committee members Messrs. Richard Ferguson, David Olsen and Shashi Pandey. Since then, Metropolitan has been an active participant in meetings of the RETI Conceptual Planning Work Group (CPWG) and related activities, including providing comments regarding RETI to the California Energy Commission on May 22 in response to the May 4, 2009, Joint Integrated Energy Policy Report and Siting Committee workshop.

These Draft Report comments focus on potential transmission projects directly affecting Metropolitan's Colorado River Aqueduct Transmission System (CRATS). Metropolitan's concerns fundamentally arise from the purpose and unique nature of the CRATS, as explained immediately below.

Metropolitan's Electrical Transmission System

Metropolitan was created in 1928 for the purpose of transporting water from the Colorado River to the growing population in Southern California. In the 1930's, it constructed the CRA, starting near the newly completed Parker Dam, through remote areas of the Mojave Desert in Riverside and San Bernardino counties and terminating near the city of Riverside. Five large pumping plants, whose total electrical demand would be nearly 300 MW, were built along the CRA. Due to the remoteness of the area, there was no existing electrical infrastructure to transport and supply the large amount of power required by these pumps. Therefore, Metropolitan had to construct a 230 kV transmission system to bring power from the Hoover and Parker Dam power plants to its five pumping plants.

The sole use and purpose of the CRATS was to deliver power to its remote pumping loads. The CRA pumps are basically tied directly to the CRATS, using a main and transfer bus

Ms. Clare Laufenberg Gallardo

Page 2

June 25, 2009

configuration. There is no redundant transmission path to several of our pumping plants, which must operate in a synchronized fashion as there is no water storage facility along the CRA. The CRATS was designed essentially as a pumping load tie.

The CRATS currently lies within the California Independent System Operator (CAISO) Balancing Authority Area as a result of a 30-year, complex integration contract with Southern California Edison that expires in 2017, under which SCE had performed control area responsibilities for the CRATS. The CRATS is not part of the ISO Controlled Grid since Metropolitan, its owner, is not a CAISO Participating Transmission Owner.

The water that Metropolitan transports through the CRA is critical to the population and economy of Southern California. Metropolitan supplies one half of the total water used by the businesses, industries and 19 million residents of this region, and over 50 percent of that water comes from the CRA. To satisfy such water demands, the CRA must be operated on a near continuous basis. In some years, we have operated the CRA at maximum flow 24/7 for the entire year. In other years, the CRA has been shut down briefly to perform scheduled maintenance during the summer, when the water supply requirements were met by other resources. Such shutdowns require extensive advance coordination and planning with Metropolitan's 26 member agencies to ensure they can continue to provide water delivery to their wholesale and retail customers. Essentially, the CRA and its supporting transmission system operate on a schedule dictated by water supply requirements, not electrical considerations.

RETI's Proposed Changes to the CRATS

RETI proposes construction of the following Iron Mountain Collector lines: (1) Replacement of Metropolitan's existing 230 kV Iron Mountain – Camino transmission line with two new 500 kV double circuit lines connecting Iron Mountain to a new Southern California Edison Company (Edison) Junction 500 kV substation to access renewable generation within the Iron Mountain Competitive Renewable Energy Zone (CREZ); and (2) a new 500 kV single circuit line from SCE Junction – Camino to access the Needles CREZ. Metropolitan's 230 kV Iron Mountain and Camino substations would be modified as 500/230 kV.

The RETI Phase 2A Draft Report also proposed other modifications to Metropolitan's CRATS that Metropolitan is pleased to learn have since been withdrawn from further consideration by the RETI CPWG. Specifically, Metropolitan understands the two new 20 mile, 230 kV double circuit lines proposed from Metropolitan's Julian Hinds 230 kV substation to Desert Center will not appear in the final Phase 2A Report. In addition, reconstruction of Metropolitan's existing 230 kV line with double circuit towers from Julian Hinds to Eagle Mountain substations and addition of a new Hinds – Eagle Mountain line on the open side of the towers has also been withdrawn. Finally, the CPWG deleted two proposed 500 kV lines from Eagle Mountain to Devers substations (Green Energy Express), and modification of Eagle Mountain substation from 230 kV to 500/230 kV. Metropolitan greatly appreciates the CPWG's efforts to reduce RETI's

Ms. Clare Laufenberg Gallardo
Page 3
June 25, 2009

impact to Metropolitan's CRATS. For the reasons explained below, we urge further consideration of RETY's proposed changes to CRATS in the Iron Mountain CREZ.

Metropolitan's Specific Phase 2A Draft Report Comments

Apparent Underestimation of Iron Mountain CREZ & Collector Line Environmental Concerns

The Draft Report appears to have underestimated environmental concerns associated with development of the Iron Mountain CREZ and construction of the associated Iron Mountain Collector lines to deliver renewable energy to load centers. Notably, the Environmental Work Group (EWG) failed to include one of the primary (if not the major) environmental constraint in the immediate area, critical habitat for the desert tortoise in its Transmission Line Environmental Issues Checklist contained in Appendix D to the Draft Report. While the Iron Mountain CREZ lies outside of designated critical habitat for the desert tortoise, the Iron Mountain - SCE Junction and SCE Junction lines lie within a large swath of critical habitat. Such lines also lie within Desert Wildlife Management Areas, and U.S. Bureau of Land Management Areas of Critical Environmental Concern, as the EWG correctly noted. Even with the omission of critical habitat for the desert tortoise, the EWG concluded that the Iron Mountain Collector lines pose "High" Environmental Concern, as documented in Appendix D.

Metropolitan has difficulty reconciling the "High" Environmental Concern noted in Appendix D with Table 1-1 in the Draft Report, which identifies the Iron Mountain Collector lines as having the fifth lowest environmental score of 12 collector lines. Their environmental score of 131 is significantly lower than the median collector line score of 249. Metropolitan assumes the low environmental score for Iron Mountain Collector lines is in part attributable to the apparent intent to locate their construction on existing right-of-way. However, these lines will be constructed in very remote, pristine areas of the Mojave Desert, and significant adverse environmental impact could ensue from such activity.

The Iron Mountain CREZ and Collector lines are subject to additional development risk, for they are located well within the proposed Mojave Desert National Monument. If established, the Monument would appear to frustrate, if not prohibit, development of renewable generation in the Iron Mountain CREZ and possibly also the Needles CREZ. Furthermore, Executive Order S-14-08 which directs development of a Desert Renewable Energy Conservation Plan based upon a Natural Communities Conservation Plan by the end of 2010 is likely to affect development of renewable energy in the Iron Mountain CREZ. Finally, the U.S. Fish & Wildlife Service is in the process of revising its Desert Tortoise Recovery Plan, which may be completed in 2009.

All of the foregoing suggests that prospective renewable generation developers would be prudent to focus their project development efforts in areas that are not subject to the extensive environmental risk and uncertainty that is clearly associated with the Iron Mountain CREZ. Transmission plans should be appropriately focused on providing access to the CREZs that do not suffer from the same degree of project development impediments as the Iron Mountain

Ms. Clare Laufenberg Gallardo

Page 4

June 25, 2009

CREZ. This is especially true in light of the Draft Report's recognition that the total estimated renewable generation in identified CREZs is several multiples in excess of the amount of California's utilities need to procure to achieve compliance with a 33% renewable portfolio standard by 2020.

Need for Coordinated Transmission Planning Efforts

As a small electric utility, Metropolitan is especially sensitive to the multiplicity of concurrent transmission planning efforts currently going forward on a state and regional basis. RETI has done a good job thus far of coordinating its activities with affected parties. As the proposed conceptual transmission plan undergoes further revision, RETI will need to remain vigilant to ensure that all affected parties have an opportunity to provide comment, and that its plans appropriately reflect external developments such as the results of CAISO generator interconnection queue, local transmission plans and regional planning efforts such as the Western Electricity Coordinating Council's Transmission Expansion Planning Policy Committee and the Arizona Corporation Commission's Biennial Transmission Assessment.

Focus on core mission

Metropolitan supports all but one of the Draft Report's Policy Recommendations. The Draft Report's recommendation that multiple transmission charges be eliminated concerns transmission cost recovery. That issue is not germane to RETI's stated purpose, which is to (i) Help identify the transmission projects needed to accommodate these renewable energy goals; (ii) Facilitate transmission corridor designation; (iii) Facilitate transmission and generation siting permitting; and (iv) Support future energy policy. Realization of RETI's purpose is already challenging; it should seek to avoid issues extraneous to the achievement of its objectives.

Conclusion

As the electric grid has developed around the CRA, Metropolitan has had to increase the complexity and capability of the protection devices on the CRATS and at the pumping plants. With the higher capacity and voltage Iron Mountain Collector lines proposed to be interconnected to the CRATS and incorporated into it, Metropolitan is very concerned about its ability to protect the pumping plants from disruption and the potential incompatibilities of the power and water conveyance missions.

Metropolitan's core mission is the reliable supply of water to Southern California, and we remain concerned the transmission network changes to our system resulting from development of the Iron Mountain CREZ and Collector lines could impair that mission. Metropolitan looks forward to further participation in the RETI to ensure realization of its important goals is achieved in a manner that doesn't compromise Metropolitan's ability to reliably deliver water to 19 million Southern California residents.

THE METROPOLITAN WATER DISTRICT OF SOUTHRN CALIFORNIA

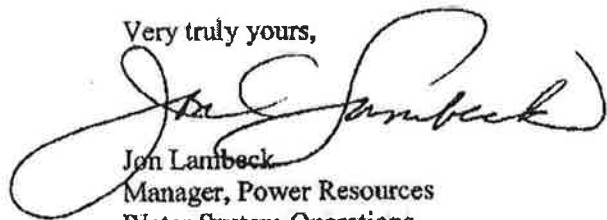

Ms. Clare Laufenberg Gallardo

ENCLOSURE 2b

Message received on January 14, 2011 at 5:05pm:

MWD appreciates the hard work put forth performing the studies and developing the CTPG reports.

MWD has a question related to a 150 MW solar plant listed in the CTPG Phase 4 report associated with an Iron Mountain CREZ on pages 22-24, 48-49, 53 and 58. The report also indicates that no grid configuration changes are necessary. Please identify the utility and location/grid/bus that this proposed 150MW plant would interconnect to.

Please confirm with the high stressed WOR flows studied in the Phase 4 report, there were no unacceptable voltages (thermal and post-transient) for MWD's 230 or 6.9kV pumping system.

Regards,
Ann Finley
MWD

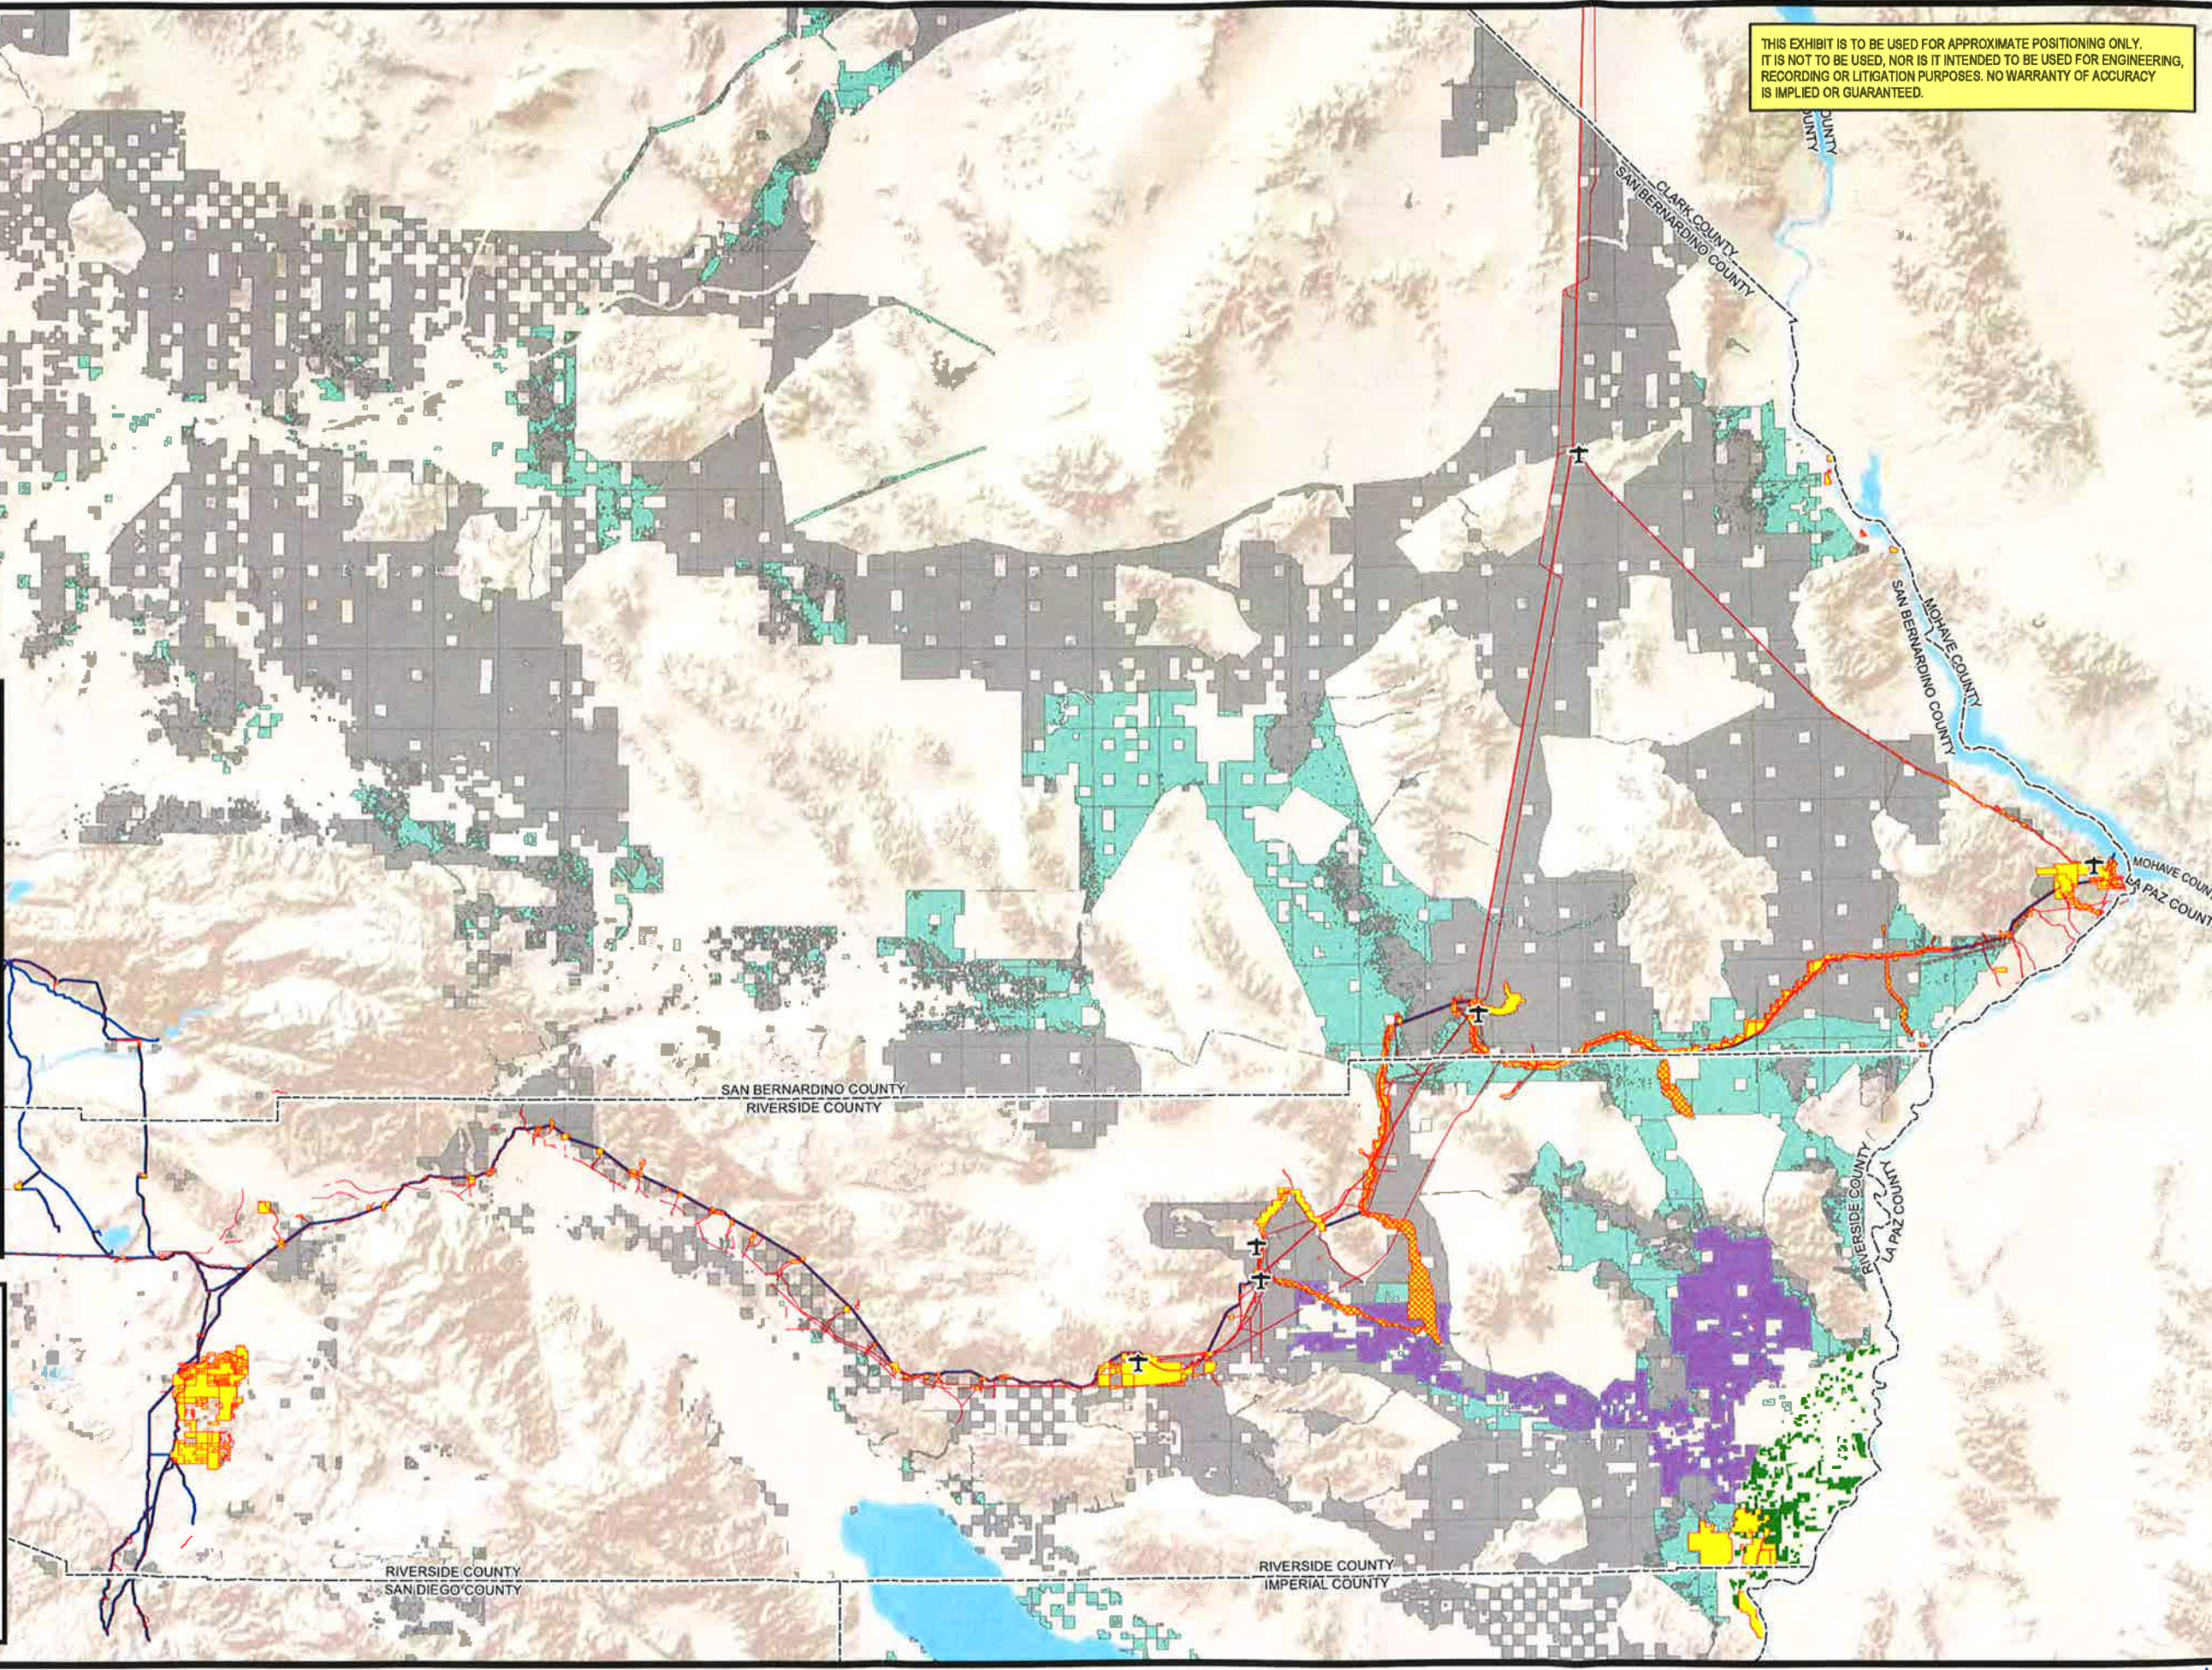

ENCLOSURE 3

ENCLOSURE 4

Guidelines for Developments in the
Area of Facilities, Fee Properties, and/or Easements
of The Metropolitan Water District of Southern California

1. Introduction

a. The following general guidelines should be followed for the design of proposed facilities and developments in the area of Metropolitan's facilities, fee properties, and/or easements.

b. We require that 3 copies of your tentative and final record maps, grading, paving, street improvement, landscape, storm drain, and utility plans be submitted for our review and written approval as they pertain to Metropolitan's facilities, fee properties and/or easements, prior to the commencement of any construction work.

2. Plans, Parcel and Tract Maps

The following are Metropolitan's requirements for the identification of its facilities, fee properties, and/or easements on your plans, parcel maps and tract maps:

a. Metropolitan's fee properties and/or easements and its pipelines and other facilities must be fully shown and identified as Metropolitan's on all applicable plans.

b. Metropolitan's fee properties and/or easements must be shown and identified as Metropolitan's with the official recording data on all applicable parcel and tract maps.

c. Metropolitan's fee properties and/or easements and existing survey monuments must be dimensionally tied to the parcel or tract boundaries.

d. Metropolitan's records of surveys must be referenced on the parcel and tract maps.

3. Maintenance of Access Along Metropolitan's Rights-of-Way

a. Proposed cut or fill slopes exceeding 10 percent are normally not allowed within Metropolitan's fee properties or easements. This is required to facilitate the use of construction and maintenance equipment, and provide access to its aboveground and belowground facilities.

b. We require that 16-foot-wide commercial-type driveway approaches be constructed on both sides of all streets crossing Metropolitan's rights-of-way. Openings are required in any median island. Access ramps, if necessary, must be at least 16-foot-wide. Grades of ramps are normally not allowed to exceed 10 percent. If the slope of an access ramp must exceed 10 percent due to the topography, the ramp must be paved. We require a 40-foot-long level area on the driveway approach to access ramps where the ramp meets the street. At Metropolitan's fee properties, we may require fences and gates.

c. The terms of Metropolitan's permanent easement deeds normally preclude the building or maintenance of structures of any nature or kind within its easements, to ensure safety and avoid interference with operation and maintenance of Metropolitan's pipelines or other facilities. Metropolitan must have vehicular access along the easements at all times for inspection, patrolling, and for maintenance of the pipelines and other facilities on a routine basis. We require a 20-foot-wide clear zone around all above-ground facilities for this routine access. This clear zone should slope away from our facility on a grade not to exceed 2 percent. We must also have access along the easements with construction equipment. An example of this is shown on Figure 1.

d. The footings of any proposed buildings adjacent to Metropolitan's fee properties and/or easements must not encroach into the fee property or easement or impose additional loading on Metropolitan's pipelines or other facilities therein. A typical situation is shown on Figure 2. Prints of the detail plans of the footings for any building or structure adjacent to the fee property or easement must be submitted for our review and written approval as they pertain to the pipeline or other facilities therein. Also, roof eaves of buildings adjacent to the easement or fee property must not overhang into the fee property or easement area.

e. Metropolitan's pipelines and other facilities, e.g. structures, manholes, equipment, survey monuments, etc. within its fee properties and/or easements must be protected from damage by the easement holder on Metropolitan's property or the property owner where Metropolitan has an easement, at no expense to Metropolitan. If the facility is a cathodic protection station it shall be located prior to any grading or excavation. The exact location, description and way of protection shall be shown on the related plans for the easement area.

4. Easements on Metropolitan's Property

a. We encourage the use of Metropolitan's fee rights-of-way by governmental agencies for public street and utility purposes, provided that such use does not interfere with Metropolitan's use of the property, the entire width of the property is accepted into the agency's public street system and fair market value is paid for such use of the right-of-way.

b. Please contact the Director of Metropolitan's Right of Way and Land Division, telephone (213) 250-6302, concerning easements for landscaping, street, storm drain, sewer, water or other public facilities proposed within Metropolitan's fee properties. A map and legal description of the requested easements must be submitted. Also, written evidence must be submitted that shows the city or county will accept the easement for the specific purposes into its public system. The grant of the easement will be subject to Metropolitan's rights to use its land for water pipelines and related purposes to the same extent as if such grant had not been made. There will be a charge for the easement. Please note that, if entry is required on the property prior to issuance of the easement, an entry permit must be obtained. There will also be a charge for the entry permit.

5. Landscaping

Metropolitan's landscape guidelines for its fee properties and/or easements are as follows:

a. A green belt may be allowed within Metropolitan's fee property or easement.

b. All landscape plans shall show the location and size of Metropolitan's fee property and/or easement and the location and size of Metropolitan's pipeline or other facilities therein.

c. Absolutely no trees will be allowed within 15 feet of the centerline of Metropolitan's existing or future pipelines and facilities.

d. Deep-rooted trees are prohibited within Metropolitan's fee properties and/or easements. Shallow-rooted trees are the only trees allowed. The shallow-rooted trees will not be permitted any closer than 15 feet from the centerline of the pipeline, and such trees shall not be taller than 25 feet with a root spread no greater than 20 feet in diameter at maturity. Shrubs, bushes, vines, and ground cover are permitted, but larger shrubs and bushes should not be planted directly over our pipeline. Turf is acceptable. We require submittal of landscape plans for Metropolitan's prior review and written approval. (See Figure 3).

e. The landscape plans must contain provisions for Metropolitan's vehicular access at all times along its rights-of-way to its pipelines or facilities therein. Gates capable of accepting Metropolitan's locks are required in any fences across its rights-of-way. Also, any walks or drainage facilities across its access route must be constructed to AASHTO H-20 loading standards.

f. Rights to landscape any of Metropolitan's fee properties must be acquired from its Right of Way and Land Division. Appropriate entry permits must be obtained prior to any entry on its property. There will be a charge for any entry permit or easements required.

6. Fencing

Metropolitan requires that perimeter fencing of its fee properties and facilities be constructed of universal chain link, 6 feet in height and topped with 3 strands of barbed wire angled upward and outward at a 45 degree angle or an approved equal for a total fence height of 7 feet. Suitable substitute fencing may be considered by Metropolitan. (Please see Figure 5 for details).

7. Utilities in Metropolitan's Fee Properties and/or Easements or Adjacent to Its Pipeline in Public Streets

Metropolitan's policy for the alinement of utilities permitted within its fee properties and/or easements and street rights-of-way is as follows:

a. Permanent structures, including catch basins, manholes, power poles, telephone riser boxes, etc., shall not be located within its fee properties and/or easements.

b. We request that permanent utility structures within public streets, in which Metropolitan's facilities are constructed under the Metropolitan Water District Act, be placed as far from our pipeline as possible, but not closer than 5 feet from the outside of our pipeline.

c. The installation of utilities over or under Metropolitan's pipeline(s) must be in accordance with the requirements shown on the enclosed prints of Drawings Nos. C-11632 and C-9547. Whenever possible we request a minimum of one foot clearance between Metropolitan's pipe and your facility. Temporary support of Metropolitan's pipe may also be required at undercrossings of its pipe in an open trench. The temporary support plans must be reviewed and approved by Metropolitan.

d. Lateral utility crossings of Metropolitan's pipelines must be as perpendicular to its pipeline alignment as practical. Prior to any excavation our pipeline shall be located manually and any excavation within two feet of our pipeline must be done by hand. This shall be noted on the appropriate drawings.

e. Utilities constructed longitudinally within Metropolitan's rights-of-way must be located outside the theoretical trench prism for uncovering its pipeline and must be located parallel to and as close to its rights-of-way lines as practical.

f. When piping is jacked or installed in jacked casing or tunnel under Metropolitan's pipe, there must be at least two feet of vertical clearance between the bottom of Metropolitan's pipe and the top of the jacked pipe, jacked casing or tunnel. We also require that detail drawings of the shoring for the jacking or tunneling pits be submitted for our review and approval. Provisions must be made to grout any voids around the exterior of the jacked pipe, jacked casing or tunnel. If the piping is installed in a jacked casing or tunnel the annular space between the piping and the jacked casing or tunnel must be filled with grout.

g. Overhead electrical and telephone line requirements:

1) Conductor clearances are to conform to the California State Public Utilities Commission, General Order 95, for Overhead Electrical Line Construction or at a greater clearance if required by Metropolitan. Under no circumstances shall clearance be less than 35 feet.

2) A marker must be attached to the power pole showing the ground clearance and line voltage, to help prevent damage to your facilities during maintenance or other work being done in the area.

3) Line clearance over Metropolitan's fee properties and/or easements shall be shown on the drawing to indicate the lowest point of the line under the most adverse conditions including consideration of sag, wind load, temperature change, and support type. We require that overhead lines be located at least 30 feet laterally away from all above-ground structures on the pipelines.

4) When underground electrical conduits, 120 volts or greater, are installed within Metropolitan's fee property and/or easement, the conduits must be incased in a minimum of three inches of red concrete. Where possible, above ground warning signs must also be placed at the right-of-way lines where the conduits enter and exit the right-of-way.

h. The construction of sewerlines in Metropolitan's fee properties and/or easements must conform to the California Department of Health Services Criteria for the Separation of Water Mains and Sanitary Services and the local City or County Health Code Ordinance as it relates to installation of sewers in the vicinity of pressure waterlines. The construction of sewerlines should also conform to these standards in street rights-of-way.

i. Cross sections shall be provided for all pipeline crossings showing Metropolitan's fee property and/or easement limits and the location of our pipeline(s). The exact locations of the crossing pipelines and their elevations shall be marked on as-built drawings for our information.

j. Potholing of Metropolitan's pipeline is required if the vertical clearance between a utility and Metropolitan's pipeline is indicated on the plan to be one foot or less. If the indicated clearance is between one and two feet, potholing is suggested. Metropolitan will provide a representative to assist others in locating and identifying its pipeline. Two-working days notice is requested.

k. Adequate shoring and bracing is required for the full depth of the trench when the excavation encroaches within the zone shown on Figure 4.

l. The location of utilities within Metropolitan's fee property and/or easement shall be plainly marked to help prevent damage during maintenance or other work done in the area. Detectable tape over buried utilities should be placed a minimum of 12 inches above the utility and shall conform to the following requirements:

1) Water pipeline: A two-inch blue warning tape shall be imprinted with:

"CAUTION BURIED _____ PIPELINE"

2) Gas, oil, or chemical pipeline: A two-inch yellow warning tape shall be imprinted with:

"CAUTION BURIED _____ PIPELINE"

3) Sewer or storm drain pipeline: A two-inch green warning tape shall be imprinted with:

"CAUTION BURIED _____ PIPELINE"

4) Electric, street lighting, or traffic signals conduit: A two-inch red warning tape shall be imprinted with:

"CAUTION BURIED _____ CONDUIT"

5) Telephone, or television conduit: A two-inch orange warning tape shall be imprinted with:

"CAUTION BURIED _____ CONDUIT"

m. Cathodic Protection requirements:

1) If there is a cathodic protection station for Metropolitan's pipeline in the area of the proposed work, it shall be located prior to any grading or excavation. The exact location, description and manner of protection shall be shown on all applicable plans. Please contact Metropolitan's Corrosion Engineering Section, located at Metropolitan's F. E. Weymouth Softening and Filtration Plant, 700 North Moreno Avenue, La Verne, California 91750, telephone (714) 593-7474, for the locations of Metropolitan's cathodic protection stations.

2) If an induced-current cathodic protection system is to be installed on any pipeline crossing Metropolitan's pipeline, please contact Mr. Wayne E. Risner at (714) 593-7474 or (213) 250-5085. He will review the proposed system and determine if any conflicts will arise with the existing cathodic protection systems installed by Metropolitan.

3) Within Metropolitan's rights-of-way, pipelines and carrier pipes (casings) shall be coated with an approved protective coating to conform to Metropolitan's requirements, and shall be maintained in a neat and orderly condition as directed by Metropolitan. The application and monitoring of cathodic protection on the pipeline and casing shall conform to Title 49 of the Code of Federal Regulations, Part 195.

4) If a steel carrier pipe (casing) is used:

(a) Cathodic protection shall be provided by use of a sacrificial magnesium anode (a sketch showing the cathodic protection details can be provided for the designers information).

(b) The steel carrier pipe shall be protected with a coal tar enamel coating inside and out in accordance with AWWA C203 specification.

n. All trenches shall be excavated to comply with the CAL/OSHA Construction Safety Orders, Article 6, beginning with Sections 1539 through 1547. Trench backfill shall be placed in 8-inch lifts and shall be compacted to 95 percent relative compaction (ASTM D698) across roadways and through protective dikes. Trench backfill elsewhere will be compacted to 90 percent relative compaction (ASTM D698).

o. Control cables connected with the operation of Metropolitan's system are buried within streets, its fee properties and/or easements. The locations and elevations of these cables shall be shown on the drawings. The drawings shall note that prior to any excavation in the area, the control cables shall be located and measures shall be taken by the contractor to protect the cables in place.

p. Metropolitan is a member of Underground Service Alert (USA). The contractor (excavator) shall contact USA at 1-800-422-4133 (Southern California) at least 48 hours prior to starting any excavation work. The contractor will be liable for any damage to Metropolitan's facilities as a result of the construction.

8. Paramount Right

Facilities constructed within Metropolitan's fee properties and/or easements shall be subject to the paramount right of Metropolitan to use its fee properties and/or easements for the purpose for which they were acquired. If at any time Metropolitan or its assigns should, in the exercise of their rights, find it necessary to remove any of the facilities from the fee properties and/or easements, such removal and replacement shall be at the expense of the owner of the facility.

9. Modification of Metropolitan's Facilities

When a manhole or other of Metropolitan's facilities must be modified to accommodate your construction or reconstruction, Metropolitan will modify the facilities with its forces. This should be noted on the construction plans. The estimated cost to perform this modification will be given to you and we will require a deposit for this amount before the work is performed. Once the deposit is received, we will schedule the work. Our forces will coordinate the work with your contractor. Our final billing will be based on actual cost incurred, and will include materials, construction, engineering plan review, inspection, and administrative overhead charges calculated in accordance with Metropolitan's standard accounting practices. If the cost is less than the deposit, a refund will be made; however, if the cost exceeds the deposit, an invoice will be forwarded for payment of the additional amount.

10. Drainage

a. Residential or commercial development typically increases and concentrates the peak storm water runoff as well as the total yearly storm runoff from an area, thereby increasing the requirements for storm drain facilities downstream of the development. Also, throughout the year water from landscape irrigation, car washing, and other outdoor domestic water uses flows into the storm drainage system resulting in weed abatement, insect infestation, obstructed access and other problems. Therefore, it is Metropolitan's usual practice not to approve plans that show discharge of drainage from developments onto its fee properties and/or easements.

b. If water must be carried across or discharged onto Metropolitan's fee properties and/or easements, Metropolitan will insist that plans for development provide that it be carried by closed conduit or lined open channel approved in writing by Metropolitan. Also the drainage facilities must be maintained by others, e.g., city, county, homeowners association, etc. If the development proposes changes to existing drainage features, then the developer shall make provisions to provide for replacement and these changes must be approved by Metropolitan in writing.

11. Construction Coordination

During construction, Metropolitan's field representative will make periodic inspections. We request that a stipulation be added to the plans or specifications for notification of Mr. _____ of Metropolitan's Operations Services Branch, telephone (213) 250-_____, at least two working days prior to any work in the vicinity of our facilities.

12. Pipeline Loading Restrictions

a. Metropolitan's pipelines and conduits vary in structural strength, and some are not adequate for AASHTO H-20 loading. Therefore, specific loads over the specific sections of pipe or conduit must be reviewed and approved by Metropolitan. However, Metropolitan's pipelines are typically adequate for AASHTO H-20 loading provided that the cover over the pipeline is not less than four feet or the cover is not substantially increased. If the temporary cover over the pipeline during construction is between three and four feet, equipment must be restricted to that which

imposes loads no greater than AASHTO H-10. If the cover is between two and three feet, equipment must be restricted to that of a Caterpillar D-4 tract-type tractor. If the cover is less than two feet, only hand equipment may be used. Also, if the contractor plans to use any equipment over Metropolitan's pipeline which will impose loads greater than AASHTO H-20, it will be necessary to submit the specifications of such equipment for our review and approval at least one week prior to its use. More restrictive requirements may apply to the loading guideline over the San Diego Pipelines 1 and 2, portions of the Orange County Feeder, and the Colorado River Aqueduct. Please contact us for loading restrictions on all of Metropolitan's pipelines and conduits.

b. The existing cover over the pipeline shall be maintained unless Metropolitan determines that proposed changes do not pose a hazard to the integrity of the pipeline or an impediment to its maintenance.

13. Blasting

a. At least 20 days prior to the start of any drilling for rock excavation blasting, or any blasting, in the vicinity of Metropolitan's facilities, a two-part preliminary conceptual plan shall be submitted to Metropolitan as follows:

b. Part 1 of the conceptual plan shall include a complete summary of proposed transportation, handling, storage, and use of explosions.

c. Part 2 shall include the proposed general concept for blasting, including controlled blasting techniques and controls of noise, fly rock, airblast, and ground vibration.

14. CEQA Requirements

a. When Environmental Documents Have Not Been Prepared

1) Regulations implementing the California Environmental Quality Act (CEQA) require that Metropolitan have an opportunity to consult with the agency or consultants preparing any environmental documentation. We are required to review and consider the environmental effects of the project as shown in the Negative Declaration or Environmental Impact Report (EIR) prepared for your project before committing Metropolitan to approve your request.

2) In order to ensure compliance with the regulations implementing CEQA where Metropolitan is not the Lead Agency, the following minimum procedures to ensure compliance with the Act have been established:

a) Metropolitan shall be timely advised of any determination that a Categorical Exemption applies to the project. The Lead Agency is to advise Metropolitan that it and other agencies participating in the project have complied with the requirements of CEQA prior to Metropolitan's participation.

b) Metropolitan is to be consulted during the preparation of the Negative Declaration or EIR.

c) Metropolitan is to review and submit any necessary comments on the Negative Declaration or draft EIR.

d) Metropolitan is to be indemnified for any costs or liability arising out of any violation of any laws or regulations including but not limited to the California Environmental Quality Act and its implementing regulations.

b. When Environmental Documents Have Been Prepared

If environmental documents have been prepared for your project, please furnish us a copy for our review and files in a timely manner so that we may have sufficient time to review and comment. The following steps must also be accomplished:

1) The Lead Agency is to advise Metropolitan that it and other agencies participating in the project have complied with the requirements of CEQA prior to Metropolitan's participation.

2) You must agree to indemnify Metropolitan, its officers, engineers, and agents for any costs or liability arising out of any violation of any laws or regulations including but not limited to the California Environmental Quality Act and its implementing regulations.

15. Metropolitan's Plan-Review Cost

a. An engineering review of your proposed facilities and developments and the preparation of a letter response

giving Metropolitan's comments, requirements and/or approval that will require 8 man-hours or less of effort is typically performed at no cost to the developer, unless a facility must be modified where Metropolitan has superior rights. If an engineering review and letter response requires more than 8 man-hours of effort by Metropolitan to determine if the proposed facility or development is compatible with its facilities, or if modifications to Metropolitan's manhole(s) or other facilities will be required, then all of Metropolitan's costs associated with the project must be paid by the developer, unless the developer has superior rights.

b. A deposit of funds will be required from the developer before Metropolitan can begin its detailed engineering plan review that will exceed 8 hours. The amount of the required deposit will be determined after a cursory review of the plans for the proposed development.

c. Metropolitan's final billing will be based on actual cost incurred, and will include engineering plan review, inspection, materials, construction, and administrative overhead charges calculated in accordance with Metropolitan's standard accounting practices. If the cost is less than the deposit, a refund will be made; however, if the cost exceeds the deposit, an invoice will be forwarded for payment of the additional amount. Additional deposits may be required if the cost of Metropolitan's review exceeds the amount of the initial deposit.

16. Caution

We advise you that Metropolitan's plan reviews and responses are based upon information available to Metropolitan which was prepared by or on behalf of Metropolitan for general record purposes only. Such information may not be sufficiently detailed or accurate for your purposes. No warranty of any kind, either express or implied, is attached to the information therein conveyed as to its accuracy, and no inference should be drawn from Metropolitan's failure to comment on any aspect of your project. You are therefore cautioned to make such surveys and other field investigations as you may deem prudent to assure yourself that any plans for your project are correct.

17. Additional Information

The Metropolitan Water District of Southern California's Detailed Comments
on the Draft Programmatic Environmental Impact Statement
for Solar Energy Development in Six Southwestern States

Page 4-49, Line 41: In the Final PEIS in the sentence, "The International Boundary and Water Commission (IBWC) was established in 1889 to implement water treaties between the United States and Mexico (IBWC 2010a).":

- before the phrase "in 1889" insert "as the International Boundary Commission",
 - after the phrase "in 1889" insert "to apply rules adopted by the Convention of 1884. The United States and Mexico used studies developed by the Commission as the basis for the first water distribution treaty between the two countries, the Convention of March 1, 1906, which allocated the waters of the Rio Grande from El Paso to Fort Quitman, an 89-mile (143 km) international boundary reach of the Rio Grande through the El Paso-Juárez Valley. The Commission was also instrumental in developing the second water distribution treaty between the United States and Mexico in 1944, which addressed utilization of the waters of the Colorado River and Rio Grande from Fort Quitman, Texas to the Gulf of Mexico. The Water Treaty of February 3, 1944 expanded the duties and responsibilities of the Commission and renamed it the International Boundary and Water Commission (IBWC).", and
 - revise the phrase "to implement" to "IBWC implements"
- to better reflect the history of the IBWC.

Page 4-50, Line 3: In the Final PEIS in the sentence, "In 2006, the United States and Mexico signed the Transboundary Assessment Aquifer Act (P.L. 109-448), which promotes sustainability of the aquifer systems that are shared across the United States–Mexico border.":

- revise the phrase "the United States and Mexico signed" to "The President approved", and
- revise the phrase "which promotes sustainability of the aquifer systems that are shared across the United States–Mexico border" to "directing the Secretary of the Interior to establish a United States-Mexico transboundary aquifer assessment program to systematically assess priority transboundary aquifers."

to reflect the language of P.L. 109-448.

Page 4-50, Line 19: Insert the phrase "downstream from Lee Ferry, Arizona" following "River" in the Final PEIS in the sentence, "In the Consolidated Decree (2006) the Supreme Court directed the Secretary of the Interior to determine and manage flow of the Colorado River, acting as a water master." in accordance with Article I(C) of the Decree.

Page 4-51, Line 2 Heading: Revise the word "Agreement" to "Document" in the Final PEIS as not all of the listings are agreements.

Page 4-51: Insert “Colorado River” before “water” in the Final PEIS in the sentence, “Authorized the Secretary of the Interior to manage all water uses in Lower Colorado River Basin.” to reflect the provisions of the Boulder Canyon Project Act.

Page 4-51: Revise “Coachella Valley Irrigation District” to “Coachella Valley Water District” in the Final PEIS in the sentence:

“Prioritized California’s allotment among local water management entities—Palo Verde Irrigation District, Yuma Project, Imperial Irrigation District, Coachella Valley Irrigation District, Metropolitan Water District, and the City and County of San Diego.”

to reflect the proper name of the District.

Page 4-51: Following the sentence “Committed 1.5 million ac-ft/yr (1.9 billion m³/yr) of Colorado River water to Mexico”, in the Final PEIS insert:

“In any year in which, as determined by the United States Section of the IBWC, there exists a surplus of waters of the Colorado River in excess of the amount necessary to supply uses in the United States and the guaranteed quantity of 1.5 million ac-ft (about 1.9 billion m³/yr) annually to Mexico, the United States undertakes to deliver to Mexico additional waters to provide a total quantity not to exceed 1.7 million ac-ft/yr (about 2.1 billion m³/yr). In the event of extraordinary drought or serious accident to the irrigation system in the United States, thereby making it difficult for the United States to deliver the guaranteed quantity of 1.5 million ac-ft/yr (about 1.9 billion m³/yr), the water allotted to Mexico will be reduced in the same proportion as consumptive uses in the United States are reduced.”

to reflect the provisions of the Treaty.

Page 4-51: Revise the word “Decision” to “Decree” in the Final PEIS in the phrase “Arizona v. California U.S. Supreme Court Decision” as the Decision was rendered in 1963 while the Decree was issued in 1964.

Page 4-51: Revise the word “Decision” to “Decree” in the Final PEIS in the sentence, “Provided a single reference to the 1964 U.S. Supreme Court Decision and provisions. Insert the phrase “the settlement of” before “Tribal” in the Final PEIS in the sentence “Also incorporated provisions for Tribal water rights for the Fort Yuma Indian Reservation.” as provisions for certain Tribal water rights for the Fort Yuma Indian Reservation were included in the 1979 Supplemental Decree.

Page 4-52: Revise the phrase “take action in reducing salinity in Colorado River water released from Morelos Dam into Mexico.” to:

“adopt measures to assure that the approximately 1.36 million ac-ft (1.7 billion m³/yr) delivered to Mexico upstream of Morelos Dam, have an annual average salinity of no more

than 115 parts per million \pm 30 parts per million over the annual average salinity of Colorado River water which arrive at Imperial Dam.”

in the Final PEIS in the sentence, “Required the United States to take action in reducing salinity in Colorado River water released from Morelos Dam into Mexico.” to reflect the text of Minute 242.

Page 4-59, Line 9: Insert the word “certain” before “water” in the Final PEIS in the sentence, “As water rights can be transferred or traded, the use of water among various sectors could also change with time.” to be consistent with the sentence beginning at Line 44.

Page 4-59, Line 23: In the Final PEIS following the sentence, “Two main water rights doctrines are used as the basis of water laws in the United States: the riparian doctrine and the doctrine of prior appropriation.” insert the sentence:

“There are three ways to apportion interstate rivers:

- First, the states in the river basin may seek relief in the U.S. Supreme Court, relying on the Court’s original jurisdiction under the Constitution to apportion the river equitably.
- Second, Congress may allocate the waters, relying on its powers over interstate commerce and navigation.
- Third the states, with Congressional consent, can sign an interstate compact-a binding agreement.

(Colorado River Commission of Nevada, 2006, “*Laws of the Rivers*” *The Legal Regimes of Major Interstate River Systems of the United States*, Oct.)”

to distinguish between intrastate and interstate water resources.

Page 4-61, Line 14: Revise the phrase “*California 15 Code of Regulations, Title 23*” to state “California Water Code and Title 23 of the California Code of Regulations” to more fully describe California’s suite of water laws.

Page 4-62, Line 34: In the Final PEIS in the sentence, “Additionally, in many regions of the southwestern United States, water conservation agencies and irrigation districts are responsible for the local management of water resources, and can also act as the water master for adjudicated basins (e.g. Imperial Irrigation District, Mojave Water Agency, Palo Verde Irrigation District, and Metropolitan Water Agency, operating in California).”:

- revise the word “local” to “regional”,
- move the text in parenthesis to following the word “resources”,
- revise “Metropolitan Water Agency” to “Metropolitan Water District”, and
- insert “(e.g. Mojave Basin Area Watermaster)” following the word “basins”

to accurately name Metropolitan and describe the agencies' responsibilities.

Page 4-66, Line 31: Insert the word "Resources" before "Control" in the Final PEIS in the sentences:

"For example, water rights and water quality are managed by the State Water Control Board, while the Department of Water Resources manages water conveyance, infrastructure, and flood management (CADWR 2010c). Surface water appropriations for nonriparian rights begin with a permit application to the State Water Control Board and a review process that examines the application's beneficial use, pollution potential, and water quantity availability."

to utilize the proper name of the Board.

Page 4-67, Line 23: Revise the phrase "neighboring states, such as Arizona (the Colorado River) and Oregon" to "the Colorado River and a neighboring state, Oregon" in the Final PEIS in the sentence:

"The water supplies of California are based on precipitation in the state as well as imports from neighboring states, such as Arizona (the Colorado River) and Oregon, and from Mexico."

as the portion of the Colorado River or its reservoirs from which water is imported is in California.

Page 4-68, Line 11: In the Final PEIS, revise the sentence "Under the Colorado River Compact of 1922, California is apportioned with 4.4 million ac-ft/yr of the river water." to:

"The State of California is entitled to the consumptive use of up to 4.4 million acre-feet per year (5.4 billion m³/yr) of Colorado River water within the Lower Basin apportionment of 7.5 million acre-feet (9.3 billion m³/yr) per year when the Secretary of the Interior determines through the Annual Operating Plan (AOP) that a Normal Condition of water availability exists. California is further entitled to additional water during years in which the Secretary determines the existence of a Surplus Condition or makes available to California water apportioned to, but not used by, the States of Arizona and Nevada. (BOR, 2010, *The Colorado River Documents 2008*, Lower Colorado Region, Sep.)"

to accurately describe the condition under which California is limited to 4.4 million ac-ft/yr.

Page 4-68, Line 14: Revise the phrase "is going to reduce the inflow in the future to meet the Compact's requirement" to "has reduced the inflow to that available during a Normal Condition or an Intentionally Created Surplus Condition" in the Final PEIS in the sentence:

"The state is going to reduce the inflow in the future to meet the Compact's requirement, thus reducing its supply from the Colorado River."

to reflect this historical development.

Page 4-68, Line 17: Revise the text “14.5million to “14.5 million” in the Final PEIS in the sentence:

“Water use fluctuates among different sectors with hydrologic conditions, such as a wet (1998), normal (2000), or dry year (2001), especially for environmental use, which ranges from 14.5million to 44.7 million ac-ft (17.9 billion to 55.1 billion m3) in depletion from 1998 to 2001.”

to correct a typographical error.

Page 4-66, Line 31: Following the phrase, “For example,” insert the following text in the Final PEIS:

“the apportionment of Colorado River water for use in the Lower Basin in the Lower Division States of Arizona, California, and Nevada is governed by the Boulder Canyon Project Act, Public Law (Pub. L.) No. 70-642, 45 Stat. 1057 (1928) (BCPA) and by the framework established under the United States Supreme Court’s 1963 Opinion and 1964 Decree in *Arizona v. California*. The 1964 Decree was incorporated in 2006 into a final consolidated decree in *Arizona v. California*, 547 U.S. 150 (2006) (Consolidated Decree). Colorado River water is apportioned for use within the Lower Division States by the Secretary of the Interior (Secretary), in accordance with the BCPA and the Consolidated Decree. (BOR, 2010, *The Colorado River Documents 2008*, Lower Colorado Region, Sep.) In California,”

to distinguish between Colorado River resources and other water resources.

Page 4-72, Line 30: Revise the phrase “Colorado River Compact of 1922” to “Boulder Canyon Project Act and the Consolidated Decree when the Secretary of the Interior determines through the Annual Operating Plan (AOP) that a Normal Condition of water availability exists” in the Final PEIS in the sentence:

“It is entitled to 300,000 ac-ft/yr (370 million m3/yr) of water under the Colorado River Compact of 1922.”

to reflect the fact that the Compact did not allocate a specific quantity of water to Nevada.

Page 4-75, Line 18: Delete the word “of” following “evaluating” in the Final PEIS in the sentence, “The responsibilities of the commission include evaluating of the conditions of the eight interstate river basins and ensuring compliance with interstate compacts for those basins.” to correct a grammatical error.

Page 4-77, Line 34: Delete the word “be” following “will” in the Final PEIS in the sentence,

“The appropriation and use of effluent requires a water right that must be granted by the Utah Division of Water Rights, and the main criterion of assessment is whether the proposed right will be reduce the water quantity for use by downstream users who may depend on the effluent to satisfy their water rights (Utah Department of Water Resources 2001).”

to correct a grammatical error.

Page 4-92, Line 33: Insert the word “California” following “Arizona” in the Final PEIS in the sentence, “As described in Section 4.9.1 (Surface Water Resources), the Lower Colorado, Rio Grande, and Great Basin hydrologic regions include arid areas in Arizona, Nevada, New Mexico, southwestern Utah, and south-central Colorado (Figure 4.9-1)” to be consistent with the area shown in Figure 4.9-1.

Page 4-93, Line 13: With respect to the sentences,

“The native fish community within the lower Colorado River hydrologic region is dominated by fishes within the minnow and sucker families. The Lower Colorado River itself was historically a warm, turbid, and swift river (Schmidt 1993). Construction of dams within the region, such as the Glen Canyon and Hoover Dams on the main-stem Colorado River, has now altered habitat conditions and changed flow regimes in some of the major river systems by creating a series of cold, clear impoundments.”,

Glen Canyon Dam is in the upper Colorado River hydrologic region as indicated by the text on page 4-95 at line 12.

Page 5-40, Line 3: Delete the word “a” before “flat” in the Final PEIS in the sentence, “Land disturbance impacts are expected to be greater in areas occupied by an alluvial fan or other landscape features with topography more so than in a flat regions.” to correct a grammatical error.

Page 6-20: Insert the phrase “and its associated right-of-way” following “Aqueduct” in the Final PEIS in the sentence, “Avoid ephemeral drainages, Ford Dry Lake, Palen Lake, McCoy Wash, and the Colorado River Aqueduct.”

Page 8.1-224, Line 31, Page 9.2- 253, Line 27 and Page 9.4-318, Line 45: Revise the word “Municipal” to “Metropolitan” in the Final PEIS in the sentence, “Patton worked out deals with the railroad companies (Union Pacific, Santa Fe, and Southern Pacific) and the Municipal Water District in order to supply transportation and water for the troops.” to properly reflect the name of the District.

Page 8.1-270, Line 1: Revise the word “Blyth” to “Blythe” in the Final PEIS in the sentence, “Census block groups with low-income populations more than 20 percentage points higher than the state average are located to the northwest of the SEZ, including the Colorado River Indian Reservation, in the city of Blyth, and to the southeast of the site, in Yuma County.” to correct a typographical error.

Figure 9.1.1.1-1, Proposed Imperial East SEZ, on Page 9.1-12 shows “BLM Lands Available” south of the Fort Yuma (Quechan) Reservation and north of the California-Arizona boundary. These lands were conveyed by BLM to the State of Arizona in 1982. As such, this area should not be shown as “BLM Lands Available” in the Final PEIS. Enclosure 6 is a copy of a February 15, 1982 letter from BLM’s Arizona State Office Acting State Director to the Governor of Arizona regarding the conveyance of this land.

The following figure, received from the Arizona State Lands Department shows the State Trust Lands in this area, called the Yuma Island.

Page 9.1-57, Line 34: Revise the word “Highland” to “Highline” in the Final PEIS in the sentence, “Divisions off the All-American Canal include the Coachella Canal (9 mi [14.5 km] east), East Highland Canal (4 mi [6.5 km] west), and Central Main Canal (14 mi [22.5 km] west of the proposed SEZ)” to correctly state the name of the canal.

Figure 9.1.9.1-1, Surface Water Features near the Proposed Imperial East SEZ, on page 9.1-58 shows the Coachella Canal as two discontinuous reaches. The figure should be revised in the Final PEIS to also show the reach between the northern and southern reaches.

Page 9.1-60, Line 37: Revise the sentence:

“In 2005, water withdrawals from surface waters and groundwater in Imperial County were 2.4 million ac-ft/yr (2.9 billion m³/yr), of which 98% came from surface waters and was used primarily for irrigating agricultural fields.”

to account for the Bureau of Reclamation’s records that diversions and consumptive use of Colorado River water by Imperial Irrigation District totaled 2,860,526 and 2,756,846 acre-feet, respectively, in that year (see <http://www.usbr.gov/lc/region/g4000/4200Rpts/DecreeRpt/2005/2005.pdf>, page 20 of pdf file).

Page 9.1-61, Line 3, Page 9.2-62, Line 15, and Page 9.4-69, Line 39: Following the phrase, “For example,” insert the following text in the Final PEIS to more accurately describe the management of Colorado River water resources in California:

“the apportionment of Colorado River water for use in the Lower Basin in the Lower Division States of Arizona, California, and Nevada is governed by the Boulder Canyon Project Act, Public Law (Pub. L.) No. 70-642, 45 Stat. 1057 (1928) (BCPA) and by the framework established under the United States Supreme Court’s 1963 Opinion and 1964 Decree in *Arizona v. California*. The 1964 Decree was incorporated in 2006 into a final consolidated decree in *Arizona v. California*, 547 U.S. 150 (2006) (Consolidated Decree). Colorado River water is apportioned for use within the Lower Division States by the Secretary of the Interior, in accordance with the BCPA and the Consolidated Decree.

The State of California’s apportionment is further governed by *General Regulations for Contracts for the Storage of Water in Boulder Canyon Reservoir, Boulder Canyon Project, and the Delivery Thereof*, adopted by the Secretary of the Interior on September 28, 1931, which incorporate a priority system agreed to by seven California water agencies in an August 18, 1931, agreement (Seven-Party Agreement). These priorities are further incorporated into the water delivery contracts entered into between the Secretary of the Interior and California water agencies pursuant to the BCPA. The parties to the Seven-Party Agreement are the Palo Verde Irrigation District (PVID), IID, Coachella Valley County Water District (now Coachella Valley Water District or CVWD), MWD, City of Los Angeles, City of San Diego, and County of San Diego. The first three priorities in the Seven-Party Agreement are for agricultural uses, in an amount collectively not to exceed 3,850,000 acre-feet (4.7 billion m³) of water per year of consumptive use. The first three priorities are not, however, individually quantified in terms of allowable consumptive use. The unquantified third priority is also a shared priority (among IID, CVWD, and PVID – for mesa lands), as is the sixth priority. The priorities established by the Seven-Party Agreement are illustrated in the following table.

California Priority System		
Priority	Description	Acre-feet* Annually
1	PVID - gross area of 104,500 acres (42,290 hectares))
2	Yuma Project (Reservation Division) - not exceeding a gross area of 25,000 acres (10,117 hectares) located in said Project))
3(a)	IID and lands in Imperial and Coachella Valleys** to be served by All American Canal) 3,850,000)
3(b)	PVID - 16,000 acres (6,475 hectares) of Lower Palo Verde Mesa lands))
4	MWD and/or City of Los Angeles and/or others on coastal plain	550,000
5(a)	MWD and/or City of Los Angeles and/or others on coastal plain	550,000
5(b)	City and/or County of San Diego***	112,000
6(a)	IID and lands in Imperial and Coachella Valley* to be served by All American Canal)) 300,000
6(b)	PVID - 16,000 acres (6,475 hectares) of Lower Palo Verde Mesa lands))
Total		5,362,000

* To convert acre-feet to meters³, multiply by 1,234.

** CVWD serves Coachella Valley.

***In 1946, the City of San Diego, the San Diego County Water Authority (SDCWA), MWD and the Secretary of the Interior entered into a contract that merged and added the City and County of San Diego's rights to storage and delivery of Colorado River water to the rights of MWD.

As the result of an agreement reached in connection with the construction of the Coachella Canal as a branch of the All-American Canal, CVWD's entitlements to water in the third and sixth priorities for lands in the Coachella Valley were subordinated to those of IID. The Secretary of the Interior has constructed the All-American Canal and delivers water to IID and CVWD under water delivery contracts by which those districts are entitled to receive deliveries of water in amounts reasonably required for potable and irrigation purposes. The Secretary of the Interior determines the amount of water reasonably required for beneficial use on an annual basis by evaluating an entitlement holder's estimated water requirements in accordance with 43 CFR Part 417 to ensure that deliveries of Colorado River water to the entitlement holder will not exceed those reasonably required for beneficial use under the respective BCPA contract or other authorization for use of Colorado River water.

The State of California is entitled to the consumptive use of up to 4,400,000 acre-feet per year (5.4 billion m³/yr) of Colorado River water within the Lower Basin apportionment of 7,500,000 acre-feet per year (9.3 billion m³/yr) when the Secretary of the Interior determines through the Annual Operating Plan (AOP) that a Normal Condition of water availability exists. California is further entitled to additional water during years in which the Secretary of the Interior determines the existence of a Surplus Condition or makes available to California water apportioned to, but not used by, the States of Arizona and Nevada.

The Colorado River Water Delivery Agreement (CRWDA), dated October 10, 2003, was entered into among the Secretary of the Interior, IID, CVWD, MWD, and the SDCWA and is

the Federal Quantification Settlement Agreement (QSA), which was required as a condition of the Interim Surplus Guidelines (ISG). Secretary of the Interior Bruce Babbitt took action to encourage the California water agencies to reach agreement, adopting the ISG on January 16, 2001, to be in place for an interim period through 2016. The CRWDA assists California in meeting the goals of California's draft Colorado River Water Use Plan by quantifying for a specific term of years the deliveries under certain Colorado River entitlements within shared priorities, so that transfers may occur. In particular, for the term of the CRWDA, quantification of Priority 3(a) was effected through caps on water deliveries to IID (consumptive use of 3.1 million acre-feet per year [3.8 billion m³/yr]) and CVWD (consumptive use of 330,000 acre-feet [407 million m³]). Quantification of Priority 6(a) was effected through quantifying consumptive use amounts to be made available in order of priority to MWD (38,000 acre-feet [47 million m³] per year), IID (63,000 acre-feet [77 million m³] per year), and CVWD (119,000 acre-feet [147 million m³] per year) with the provision that any additional water available to Priority 6(a) be delivered under IID's and CVWD's existing water delivery contracts with the Secretary. The CRWDA provides that the underlying water delivery contracts with the Secretary remain in full force and effect. (BOR, 2010, *The Colorado River Documents 2008*, Lower Colorado Region, Sep.) In California,"

Page 9.2-59, Line 32: Revise the phrase "and water districts of" to ", water districts, and a county water authority in" in the Final PEIS in the sentence:

"The CRA delivers Colorado River water from a diversion near Parker Dam on the California-Arizona border (approximately 43 mi [69 km] northeast of the proposed SEZ) to municipalities and water districts of southern California."

to more accurately reflect the agencies receiving Colorado River water.

Page 9.2-59, Line 35: Revise the values "550,000" and "0.7" to "632,000" and "0.8", respectively, in the Final PEIS in the sentence, "The CRA conveys flows that range from 550,000 ac-ft/yr up to 1.3 million ac-ft/yr (0.7 billion to 1.6 billion m³/yr) (MWD 2008)" to reflect the minimum value shown in Figure 2-3 of the reference.

Page 9.2-62, Line 35: Following "26", insert the text "cities," following "municipal" delete the word "and" and following "districts", insert the phrase ", and a county water authority", in the Final EIS in the sentence, "The CRA is managed and maintained by the MWD, a consortium of 26 municipal and water districts." to more accurately reflect the consortium of governments.

Page 9.2-62, Line 38: With respect to the sentence,

"While the CRA conveys substantial water flows along the southern boundary of the proposed SEZ, this water is essentially unavailable for solar energy development because of its location outside of the MWD service area; thus, any water transfers would have to be approved by the MWD board (MWD 2009, Section 4200)."

Metropolitan is willing to discuss the transfer or exchange of a portion of its Colorado River water supply subject to any required approvals and so long as the solar energy project proponent agrees to provide Metropolitan with a replacement water supply.

Page 9.2-63, Line 1: Following the word “River”, insert the text “and MWD has not taken delivery of any Full Domestic Surplus water since 2002” in the Final PEIS in the clause, “Continued low water levels in Lake Mead affect the surplus water supplies provided to the MWD by the Bureau of Reclamation from the Colorado River;” to describe this historical development.

Page 9.2-64, Line 39: Delete the word “board”, in the Final PEIS in the sentence, “Water from the CRA is assumed to be unavailable to solar energy facilities because of two factors: (1) the mechanisms to obtain CRA water would have to be negotiated with the MWD board on a project-specific basis and (2) current water demands by MWD member agencies suggest minimal water is available.”

Page 9.2-70, Line 43 and Page 9.4-79, Line 11: Insert the following text in the Final PEIS:

- “Groundwater pumping in the region along the CRA should be limited to avoid land surface subsidence.”

to address the concern expressed at line 9 on page 9.2-67 of the Draft PEIS. This sentence should also be included on Page 9.2-9 in Table 9.2.1.3-1 and on Page 9.4-9 in Table 9.4.1.3-1 of the Final PEIS.

Page 9.2-252, Line 39 and Page 9.4-318, Line 9: In the Final PEIS in the sentence, “Water did not come to the Colorado Desert until the 1930s when the Metropolitan Water District was created and work began on the CRA from Parker Dam to Los Angeles; it was completed in 1938.”:

- revise the word “when” to “after”,
- revise the phrase “Los Angeles” to “Lake Mathews, the CRA’s terminal reservoir”, and
- revise the year “1938” to “1940”

to accurately describe this historical development.

Page 9.2-316, Line 29 and Page 9.4-387, Line 6: With respect to the sentence:

“The project would involve taking water from the CRA during high rainfall years and storing it in aquifer systems to supply southern California’s water needs during periods of severe drought.”,

it should be noted that Metropolitan has not agreed to the diversion of water from the CRA for the “Cadiz Valley Dry-Year Supply Project” as of this point in time. A copy of the Notice of Preparation of a Draft EIR and Public Scoping Meeting Notice, Cadiz Valley Water

Conservation, Recovery, and Storage Project may be found at <http://www.smwd.com/assets/downloads/cadiz-nop-02-25-11.pdf>.

Page 9.4-12 and Page 9.4-134, Line 30: Revise the phrase “wetlands, and the CRA should be avoided.” to “and wetlands should be avoided. The CRA and its associated right-of-way should be avoided without prior Metropolitan approval.” in the Final PEIS in the sentence, “To the extent practicable, ephemeral drainages, Ford Dry Lake and Palen Lake, wetlands, and the CRA should be avoided.”

Page 9.4-23, Line 10: Delete the words “Los Angeles” in the Final PEIS in the sentence, “The SEZ is located along a critical east–west corridor that contains I-10, numerous pipelines, and transmission lines and surrounds a portion of the Los Angeles Metropolitan Water District (MWD) Colorado River Aqueduct (CRA).” as Los Angeles is not part of The Metropolitan Water District of Southern California’s proper name. The City of Los Angeles is one of 26 member agencies of Metropolitan.

Page 9.4-70, Line 28: In the Final PEIS in the bullet, “1964 U.S. Supreme Court decision, along with the Consolidation Decree of 2006, which provides a single reference to the 1964 decision (*Arizona v. California* 2006)”:

- revise the word “decision” to “decree”,
- revise the word “Consolidation” to “Consolidated”, and
- insert the phrase “as amended and supplemented” before “(*Arizona*)”

to reflect the wording in BOR, 2010, *The Colorado River Documents 2008*, Lower Colorado Region, Sep.

Page 9.4-70, Line 32: Before the phrase “In accordance with the Law of the River”, insert the following sentences in the Final PEIS:

“The decree is specific about the responsibility of the Secretary of the Interior to account for consumptive use of water from the mainstream. Consumptive use is defined to include ‘water drawn from the mainstream by underground pumping.’ (Wiele et al. 2008)”

to explain why certain groundwater pumping is considered to be Colorado River water.

Page 9.4-70, Line 34: Following the words “Accounting Surface”, insert the following text in the Final PEIS:

“ Wells that have a static water-level elevation near, equal to, or below the Accounting Surface are presumed to yield water that will be replaced by water from the river. Wells that have a static water-level elevation above the Accounting Surface are presumed to yield water that will be replaced by water from precipitation and inflow from tributary valleys. (Wiele et al. 2008)”

to explain the presumptions associated with the Accounting Surface.

Page 9.4-70, Line 34: Revise the text “and, it” to “The Accounting Surface” in the Final PEIS in the phrase “and it establishes a surface of static groundwater elevations,” to begin a new sentence after incorporating the previous comment.

Page 9.4-70, Line 35: Revise the text “below which water is” to “near, equal to or below which water is to be” in the Final PEIS in the phrase “below which water is accounted for as Colorado River water and above which water is accounted for as local tributary replenished water (Wilson and Owen-Joyce 1994; Wiele et al. 2008) to be consistent with Wiele et al. 2008, in particular pages 6 and 11 of that reference.

Page 9.4-70, Line 37: Insert the text “near, at, or” before “below” in the Final PEIS in the sentence:

“Groundwater below the Accounting Surface is subject to water management by the Law of the River, which is administered by the BOR (Wilson and Owen-Joyce 1994), and water above the Accounting Surface is subject to water management by state and local entities.”

to be consistent with Wiele et al. 2008.

Page 9.4-71, Line 14: Revise the word “develop” to “use” and insert “and Coachella Valley Water District” following “District” in the Final PEIS in the sentence:

“The PVID shares a priority right to develop up to 3.85 million ac-ft/yr (4.75 billion m³/yr) with the Yuma Project and the Imperial Irrigation District according to the California Seven Party Agreement of 1931”.

reflecting text in BOR, 2010, *The Colorado River Documents 2008*, Lower Colorado Region, Sep..

Page 9.4-74, Line 17: Insert the phrase “are recommended to be” before “less” and revise the phrase “for prolonged use to meet California drinking water standards” to “to meet secondary maximum contaminant levels” in the Final EIS in the sentence:

“As mentioned previously, TDS values in a potable water supply must be lower than 1,500 mg/L for short durations and less than 500 mg/L for prolonged use to meet California drinking water standards (*California Code*, Title 22, Article 16, Section 64449).”

to be consistent with the text on page 9.4-73 at line 22.

Page 9.4-77, Line 26: Insert the text “near, at, or” before “below” in the Final PEIS in the sentence:

“An additional constraint on groundwater development in the proposed Riverside East SEZ is the water rights issue related to the Colorado River Accounting Surface, which defines a

groundwater elevation below which the groundwater is accounted for as fully allocated Colorado River water.”

to be consistent with Wiele et al. 2008.

Page 9.4-121, Line 40: Revise the phrase “wetlands and the CRA.” to “and wetlands. Avoid the CRA and its associated right-of-way without prior Metropolitan approval.” in the Final PEIS in the sentence, “To the extent practicable, avoid ephemeral drainages, Ford Dry Lake and Palen Lake, wetlands, and the CRA.”

Page 10.1-328, Line 46, Page 10.2-266, Line 34, Page 10.3-319, Line 27, and Page 10.4-300, Line 42: Cite a source for the statement, “Hydrologic studies of the Upper Colorado River Basin estimate average decreases in runoff of 6 to 20% by 2050 (as compared to the twentieth century average)”. Include the source in the References.

Page 11.3-10 and Page 11.3-125, Line 35: Revise the word “Meade” to “Mead” in the Final PEIS in the sentence, “Minimize or eliminate the impact of groundwater withdrawals on streams near the SEZ such as the Muddy River, and springs such as those along the north shore of Lake Meade and within Desert NWR and Moapa NWR” to correct a typographical error.

Page 11.3-123, Line 32: Revise the word “Meade” to “Mead” in the Final PEIS in the sentence, “The nearest perennial stream (Muddy River) and permanent water body (Lake Meade) are both more than 14 mi (24 km) away from the SEZ.” to correct a typographical error.

Page 11.2-123, Line 35: Revise the word “Meade” to “Mead” in the Final PEIS in the sentences:

“Several springs are located within 50 mi (80 km) of the Dry Lake SEZ, including springs on the north shore of Lake Meade, and springs within the Desert NWR and the Moapa Valley NWR. Historically, some springs on the north shore of Lake Meade contained native fishes like the speckled dace (*Rhinichthys osculus*), but introduced fishes like cichlids have reduced or eliminated native species (Courtenay and Deacon 1983).”

to correct typographical errors.

Page 11.3-125, Line 1: Revise the word “Meade” to “Mead” in the Final PEIS in the sentence:

“In addition, groundwater withdrawals could alter the size and chemical and physical conditions of groundwater-dependent springs (including those on the north shore of Lake Meade and within Desert NWR and Moapa NWR) in the vicinity of the SEZ, and adversely affect associated aquatic communities.”

to correct a typographical error.

Page 13.1-271, Line 35 and Page 13.2-267, Line 26: Revise the phrase “on the Lower Colorado River” to “in the Upper Colorado River Basin” in the Final PEIS in the sentence:

“To meet future increases in water demand, Washington, Iron, and Kane Counties in southwestern Utah are studying the feasibility of an agreement to obtain water from Lake Powell on the Lower Colorado River via a pipeline.”

as Lake Powell is in the Upper Colorado River Basin as indicated by the text on page 4-95 beginning at line 12.

Page 13.1-271, Line 44 and Page 13.2-267, Line 35: In the Final PEIS, revise the sentence “It would tap into Utah’s unused portion of the Upper Colorado River, which was defined as belonging to Utah in the 1922 Colorado River Compact.” to:

“The water diverted into the pipeline will be a portion of Utah’s Upper Colorado River Basin Compact allocation, and will consist of water rights to be held or acquired by the three water districts and the Utah Board of Water Resources.” (Utah Division of Water Resources, 2011, Lake Powell Pipeline, General Information. Available at <http://www.water.utah.gov/LakePowellPipeline/GeneralInformation/default.asp>.)

as the 1948 Upper Colorado River Basin Compact rather than the 1922 Colorado River Compact allocated consumptive use of water from the Upper Colorado River System to Utah.

Page H-14: Following the row that includes “Safe Drinking Water Act (42 USC 300(f) et seq.)”, in the Final PEIS insert:

- “Boulder Canyon Project Act of 1928 (43 USC. §§ 1501, et seq.)”

as a federal law applicable to proponents of solar energy projects utilizing groundwater from near, at, or below the Colorado River Accounting Surface, based on the text on page 4-51.

ENCLOSURE 6

United States Department of the Interior

9620:2
2/15/82

BUREAU OF LAND MANAGEMENT

ARIZONA STATE OFFICE
2400 VALLEY BANK CENTER
PHOENIX, ARIZONA 85073

February 15, 1982

Honorable Bruce Babbitt
Capitol Building
1700 West Washington
Phoenix, Arizona 85007

Dear Governor Babbitt:

I am pleased to transmit to you a copy of the new land survey of the Yuma Island area which was completed and approved on February 4, 1982. This is the new survey authorized by Secretary of the Interior James G. Watt to replace the 1962 survey of the same area.

This new survey, in effect, conveys to the State title to about 1,568 acres on the "west half" of Yuma Island. The survey designates these lands as accretion to other State lands located at the confluence of the Gila and Lower Colorado Rivers. The location of these new State lands is shown on the enclosed map. You will note that most of these lands are in the State of California.

Most of these Yuma Island lands have been in agricultural use for many years under permits issued by the Bureau of Land Management. Late last year the agricultural permittees were notified that the State Land Department would be their new landlord in 1982.

The "east half" of Yuma Island, consisting of about 776 acres of Federal land, will be conveyed to the State within the next 60 days as part of the lands being given to the State in compensation for the State lands on South Yuma Mesa that were taken by the Bureau of Reclamation for the Lower Colorado River Salinity Control Project.

We are providing copies of this survey plat, the survey notes, and the existing agricultural permits to State Land Commissioner Joe T. Fallini. Our Yuma District staff will assist in any way we can to facilitate the transfer of records relating to the existing uses on those lands.

Sincerely,

Tom Allen

Tom Allen
Acting State Director

TOWNSHIP 8 SOUTH, RANGE 23 WEST, OF THE GILA AND SALT RIVER MERIDIAN, ARIZONA

DEPENDENT RESURVEY

A history of surveys is contained in the field notes.

This plan represents the dependent survey of a portion of the range from Section 2, T. 8 S., R. 23 W. and 27 S., (Salt boundary T. 8 S., R. 23 W. Gila boundary T. 8 S., R. 21 W.) Gila River, Maricopa, Arizona. The survey was made in 1907 and 1908 from original bearings and distances. It has been established by the Arizona Survey Commission and the United States Survey Commission. The original bearings and distances are as follows: T. 8 S., R. 21 W., 61° 15' 30" N., 10.000; T. 8 S., R. 21 W., 61° 15' 30" N., 10.000; T. 8 S., R. 21 W., 61° 15' 30" N., 10.000.

This plan represents the portion of the survey north of the Salt River. The survey was made on the 17th occupied March 31, 1901.

The showing of the position of the Salt River of the Gila River is based on the field notes received of the survey of the Arizona-California boundary in 1907 and 1908 and the showing of the Arizona-California boundary is based on the plan accepted April 9, 1901.

The bearings and distances of the plan are as shown on the plan approved April 10, 1901.

Survey conducted by Harry G. Smith, Superintendent California Survey, beginning December 15, 1901, and completed December 15, 1902. Pursuant to Special Instructions dated December 15, 1901, for Group No. 317, Arizona.

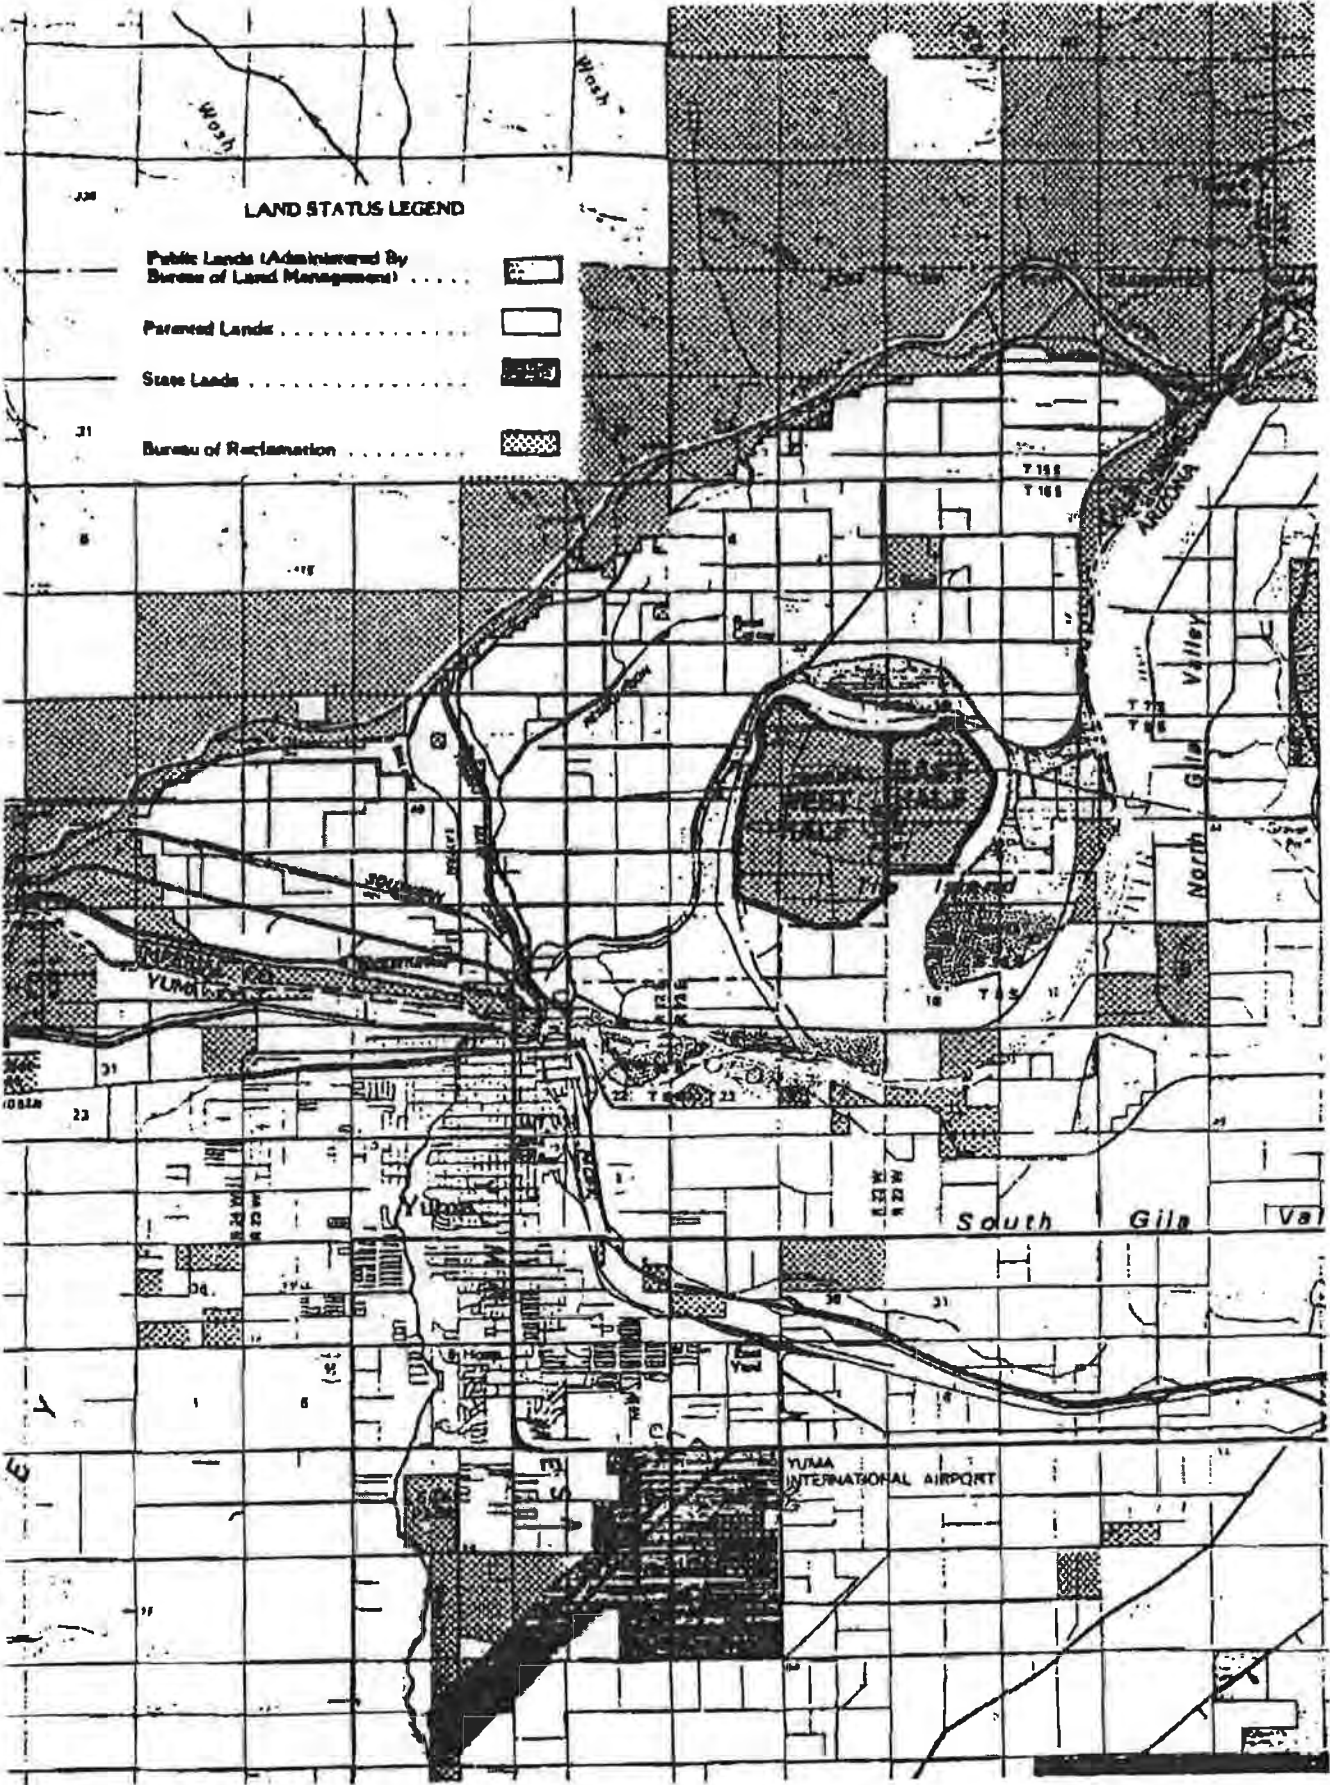

UNITED STATES DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
WASHINGTON, D. C. February 4, 1902

This plan is submitted for the approval of the Survey Commission, and the survey being conducted in accordance with the requirements of law and the regulations of this Bureau, is hereby accepted.

For the Director

Harry G. Smith

Field Chief, California Survey
Commissioner and Approval Staff

January 25, 2012

Linda Resseguie, Project Manager
Solar Energy Supplement Draft Programmatic EIS
Argonne National Laboratory
9700 S. Cass Avenue – EVS/240
Argonne, Illinois 60439

Dear Ms. Resseguie:

**SUBJECT: PUBLIC COMMENTS ON THE SOLAR ENERGY DEVELOPMENT
IN SIX SOUTHWESTERN STATES SUPPLEMENT TO THE DRAFT
PROGRAMMATIC ENVIRONMENTAL IMPACT STATEMENT**

The Southern Nevada Water Authority (SNWA) appreciates the opportunity to provide the following public comments on the Solar Energy Development in Six Southwestern States Supplement to the Draft Programmatic Environmental Impact Statement (PEIS). SNWA is responsible for the management and development of water resources for southern Nevada and has existing and future interests within the proposed Dry Lake and Dry Lake Valley North Solar Energy Zones (SEZs) and associated Variance Areas, and the proposed Delamar Valley Variance Area in Nevada. Public comments on the Draft PEIS were submitted by SNWA in a letter dated March 30, 2011. At that time, the concept of Variance Areas was not part of the Bureau of Land Management's (BLM) alternatives. It is the understanding of SNWA that the areas eliminated from the original Draft PEIS SEZs will be retained as Variance Areas if BLM's preferred alternative is selected in the Final PEIS. Therefore, SNWA requests that the comments submitted on the Draft PEIS be considered for the Supplement to the Draft PEIS, where applicable, since the Variance Areas still represent either a portion of the original Draft PEIS SEZs (e.g. Dry Lake SEZ and Dry Lake Valley North SEZ in Nevada) or in some cases the entire original Draft PEIS SEZ (e.g. Delamar Valley SEZ in Nevada).

Clark, Lincoln, and White Pine Counties Groundwater Development Project

SNWA has applied to the BLM for rights-of-way (ROWs) to construct the Clark, Lincoln, and White Pine Counties Groundwater Development (GWD) Project and an EIS is currently in preparation. The GWD Project consists of pipelines, power lines, and associated facilities for which ROWs have currently been requested and future groundwater production wells, collector pipelines, and distribution power lines for which ROWs will be requested in the future. The currently requested GWD Project ROWs and

Ms. Linda Resseguie

January 25, 2012

Page 2

areas identified for future ROWs lie within the proposed Dry Lake Valley North SEZ as well as the Variance Areas (BLM-preferred alternative) for Dry Lake Valley North and Delamar Valley. For this reason, SNWA requests clarification in the Final PEIS that existing ROWs at the time a SEZ or Variance Area is officially designated would not be affected. Further, the Final PEIS should identify that any future designation of a SEZ or Variance Area does not exclude issuance of additional non-solar energy project ROWs within that SEZ or Variance Area. The BLM should retain discretion to authorize additional ROWs within any identified or designated SEZ or Variance Area until a specific solar energy development project in that area is authorized, and only then would future ROWs be subject to the rights granted for solar energy development.

The following are SNWA's detailed comments on the Supplement to the Draft PEIS:

Water Resources

SNWA provided specific comments on the Draft PEIS concerning water resource availability and/or use limitations in the Dry Lake, Delamar, and Dry Lake Valley North SEZ areas in Nevada. Although the Supplement to the Draft PEIS has proposed new SEZ areas, SNWA requests that previously submitted comments be considered for the Supplement to the Draft PEIS due to the newly proposed Variance Areas (BLM-preferred alternative) in Nevada.

Section 3.2.4 (Page 3-3, Line 27): In describing aquifers, the term "groundwater" should be deleted since an aquifer is a groundwater reservoir.

Section C.4.2.5.8 (Page C-172, Line 28), Section C.4.3.5.8 (Page C-193, Lines 38-39), and Section C.7.2.1 (Page C-339, Line 30): A first key step in preparing a planning-level inventory of water resources should include an analysis of water rights, water rights ownership, and potential water availability. In the case of Nevada, the Nevada State Engineer's Office in many cases has already evaluated potential water resource availability and/or limited additional water uses. The water resources inventory should also verify owners of water rights which could be used to determine stakeholders and/or contacts for water supply. These steps should be included in the initial planning process since they have the potential to dramatically change a proponents remaining actions regarding water resources.

Rangeland Resources

SNWA appreciates that the northern boundary of the Dry Lake Valley North SEZ was adjusted to avoid the Wilson Creek grazing allotment. SNWA holds livestock grazing permits for this allotment and SNWA's entire sheep winter grazing and lambing operations and part of its sheep spring grazing operation rely entirely on the Wilson Creek grazing allotment. Nevertheless, the area eliminated from the proposed Dry Lake Valley North SEZ will be retained as a Variance Area if BLM's preferred alternative is selected in the Final PEIS. This Variance Area overlaps with the Wilson Creek grazing

Ms. Linda Resseguie

January 25, 2012

Page 3

allotment. Therefore, the Final PEIS should clarify if the BLM Right-of-Way Authorization Policies (Section 2.2.1.1) apply to both SEZ and Variance areas. If the Authorization Policies pertain to Variance Areas, then the associated mitigation suggested in the Supplement to the Draft PEIS, compensation, does not adequately address the impact created by the establishment of the Variance Area.

Access

As stated in the public comments submitted by SNWA on the Draft PEIS, SNWA has existing ROWs from the BLM for groundwater monitoring and testing wells that are located adjacent to the then proposed Delamar Valley and Dry Lake Valley North SEZs. These facilities are part of ongoing regional groundwater monitoring and are visited at least quarterly to collect data. Access to these facilities uses existing access roads through both SEZs. Although the Delamar Valley SEZ has been eliminated and the Dry Lake Valley North SEZ has been reduced in size, the areas eliminated will still be retained as Variance Areas if BLM's preferred alternative is selected in the Final PEIS. Therefore, the Final PEIS should identify that existing access roads to existing ROWs would either be maintained or the BLM or solar project developer would develop alternative access routes acceptable to the ROW holder. SNWA requests that the BLM consult with SNWA during any future project-specific analyses to ensure access to these existing ROWs is maintained.

If you have any questions regarding these comments or need additional information, please contact Kimberly Reinhart, Senior Environmental Planner, at (702) 862-3457 or at kimberly.reinhart@snwa.com.

Sincerely,

Zane L. Marshall

Director, Environmental Resources

Subject: Re: Comment Period for the Supplement to Close January 27th

The terrific amount of grading for access to building areas is of concern. In our area (Nelson/Searchlight) there are signs everywhere saying it's an area of Environmental Concern, yet those same areas are under consideration for solar plants. The small generating plant in Eldorado Valley just keeps grinding away, rain or shine, unaffected by clouds, dust (U. S. 95 near the solar plant was closed Sunday due to 60-70 MPH winds and heavy dust). Both Searchlight and Nelson were without power. Terribles's in Searchlight could not pump gas. McDonald's could not serve or sell. The lenses of the solar plant had to have been covered with dirt, if not etched or pocked because of flying gravel. Turtles are still on the endangered species list. They live underground in the winter. Frequently we have flocks of egrets, ducks or geese flying thru. Hopefully they won't mistake lenses for water and break legs or necks in landing.

Re: Comments on the Supplement to the Draft Programmatic Environmental Impact Statement (SPEIS) for Solar Energy Development in Six Southwestern States

Dear Ms. Resseguie:

My name is Don Whitacre and I have a home at 2584 Old River Road, Walters Camp. It has come to our attention that most of the Vinagre Wash Special Management Area that is proposed in Senator Dianne Feinstein's California Desert Protection Act of 2011 (S. 138) is zoned as a "variance area," or "lands available for solar energy right-of-way applications" under the Modified Program Alternative in the SPEIS.

We urge you to remove the proposed SMA from the variance area because:

- It is a popular area for family recreation, including backcountry four-wheeling opportunities that are not available elsewhere in the region;
- It is composed of extremely rugged, rolling terrain that is inappropriate for solar development;
- The portions that are relatively flat are in large washes that experience violent flash floods;
- The US Navy uses the SMA to train some of its most elite personnel, including the SEALs, and from what we understand the area must remain undeveloped for it to meet the Navy's training needs;
- It is adjacent to the Indian Pass Wilderness and lands that are proposed as potential wilderness in S. 138;
- The area contains many important Native American cultural sites; and
- The area is known for its great ecological diversity and importance, especially the riparian woodlands that grow along Milpitas Wash.

Thank you for considering our comments.

Sincerely,
The D.A. Whitacre Family

Subject: Ues of public lands for renewable energy

It is difficult to deny that renewable energy can be of benefit to all. However; why would it need to come from public land?

Struggling, hard working families already face many depleting enjoyments. Now there may be a lack of enjoying the simplicity of nature.

Public lands? If sold and/or leased by the government, that would not make them public, would it? That would be gain for the government and yet something, once again, less for the people.

There is comparable, private land, just as suitable or more so, than BLM land for solar/renewable energy farms.

If going green is to be for the betterment of all, then the government needs to step back for once and allow some of the hard working private sector that keeps this country running have the opportunity of utilizing their land toward renewable energy farms. When private land can be offered, shouldn't it be first consideration always, before public lands?

Thank you for your time.

Re: Solar Energy Draft PEIS/PA

Dear Assistant Director Nedd,

Thank you for correspondence dated October, 2011, with an enclosed *Supplement to the Impact Draft Programmatic Environmental Statement for Solar Energy Development in Six Southwestern States* and a *Draft Programmatic Agreement pursuant to the National Historic Preservation Act*. The Hopi Tribe claims cultural affiliation to prehistoric cultural groups in Arizona, Colorado, Nevada, New Mexico, and Utah. The Hopi Cultural Preservation Office supports the identification and avoidance of prehistoric archaeological sites, and we consider the prehistoric archaeological sites of our ancestors to be "footprints" and Traditional Cultural Properties. Therefore, we appreciate the Bureau of Land Management (BLM)'s continuing solicitation of our input and your efforts to address our concerns.

The Hopi Cultural Preservation Office is interested in consulting on any proposal on lands in Arizona, New Mexico, Nevada, and Utah with the potential to adversely affect prehistoric sites. We previously received your February 15, 2011, correspondences with an enclosed Draft Programmatic Environmental Impact Statement for Solar Energy Development in Six Southwestern States. We understand the purpose is to identify areas within six States that are most suitable for development of renewable energy facilities,

We have reviewed the enclosed *Supplement to the Impact Draft Programmatic Environmental Statement for Solar Energy Development in Six Southwestern States*. Regarding the proposed Solar Energy Zones:

In Arizona, the proposed Brenda Solar Energy Zone has had no cultural resource survey and a very small percentage of the proposed Gillespie Solar Energy Zone has been surveyed for cultural resources.

Michael D. Nedd
January 23, 2012
Page 2

In Colorado, the proposed Antonio Southeast, Fourmile East, and Los Mogotes East Solar Energy Zones have had no cultural resource survey and a very small percentage of the proposed De Tilla Gulch Solar Energy Zone has been surveyed for cultural resources.

In Nevada, less than 2% of the proposed revised Amargosa Valley Solar Energy Zone and at least 60 sites have been identified within 5 miles. Almost 50% of the proposed revised Dry Lake Solar Energy Zone has been surveyed, 6 sites have been recorded within the revised zone and at least 229 sites have been identified within 5 miles. Approximately 3% of the proposed revised Dry Lake Valley North Solar Energy Zone has been surveyed, 21 sites have been identified, and at least 153 sites have been identified within 5 miles. None of the Gold Point Solar Energy Zone has been surveyed. Approximately 4% of the Millers Solar Energy Zone has been surveyed, 30 sites have been identified within the zone and more than 100 have been identified within 5 miles.

In New Mexico, 6% of the revised proposed Afton Solar Energy Zone has been surveyed and at least 58 sites have been identified within the zone, and approximately 330 sites have been identified within five miles.

In Utah, less than 4% of the proposed Escalante Valley Solar Energy Zone has been surveyed and approximately 60 sites have been identified within five miles, less than 2% of the proposed Milford Flats South Solar Energy Zone has been surveyed and approximately 100 sites have been identified within five miles, and less than 1% of the proposed Wah Wah Valley Escalante Valley Solar Energy Zone has been surveyed.

This *Supplement to the Impact Draft Programmatic Environmental Statement for Solar Energy Development in Six Southwestern States* demonstrates how little cultural resource survey has occurred in these proposed Solar Energy Zones, and how little the BLM knows of the cultural resources in its care. Therefore, we support cultural resource surveys and continued government to government consultation.

We also support the comments of the Nevada and Tribes that the significance of the proposed Solar Energy Zones is expressed in terms of the connections between it and places of importance in the surrounding region, and the artifacts are physical reminders that connect us to our ancestors who lived on and used this land. These comments apply to the proposed Solar Energy Zones in the other states where ethnographic consultations on these proposed zones have not yet been conducted.

Avoiding and minimizing adverse impacts to important heritage resources can only be adequately accomplished through consultations with affected Native Tribes. Identifying and mitigating cultural resource sites only in areas of disturbance within the larger footprint of a renewable energy development proposal does not address the unidentified sites within that

Michael D. Nedd
January 23, 2012
Page 3

footprint that may be indirectly adversely affected by it, nor does it address the greater landscape of the area of potential effect. Traditional Cultural Properties are embedded in the greater landscape.

We support the Secretary of the Interior's goals to build America's new energy future and to protect and restore treasured landscapes. We recommend that areas identified for renewable energy development be connected to areas identified for the cleanup of past mining activities, and identified areas containing known sensitive resources should be excluded from consideration as development areas. We believe the BLM should focus on locations that are previously disturbed or contaminated and water conservation and protection.

Regarding the enclosed revised draft *Programmatic Agreement*, we defer to the State Historic Preservation Offices. However, we are interested in how the BLM will address the cumulative impacts of renewable energy development and its associated infrastructure on a landscape scale. Therefore, we look forward to site specific consultation on the proposed Solar Energy Zones in Arizona, Colorado, Nevada, New Mexico, and Utah.

If you have any questions or need additional information, please contact Terry Morgart at the Hopi Cultural Preservation Office at 928-734-3619 or tmorgart@hopi.nsn.us. Thank you for your consideration.

Respectfully,

Leigh J. Kuwanwisiwma, Director
Hopi Cultural Preservation Office

Bureau of Land Management
 Solar Energy Draft PEIS
 Argonne National Laboratory
 9700 S. Cass Avenue—EVS/240
 Argonne, IL 60439

Dear Ms. Stewart,

I am writing to provide comments on the Supplement to the Draft Solar Energy Programmatic Environmental Impact Statement.

Counties like mine in the West have a long relationship with the public lands. We have an historic opportunity to improve the way solar resources are developed on public lands. The long-term plan for solar energy development now being considered, the Supplement to the Draft Solar Programmatic Environmental Impact Statement (PEIS), will help shape future energy development and land use across the public lands of the west.

I applaud the BLM in responding to recommendations from the public to focus development in pre-screened, low-conflict zones. Overall, the Supplement is a step in the right direction, and most of the elements should be carried through the final plan. However, I believe the plan should provide additional incentives for building projects in low conflict zones and avoid development on public lands that are important for wildlife, recreation, tourism and other uses by County residents and visitors.

To ensure that solar development on public lands is smart from the start, I support most of the plan as laid out in the revised Preferred Alternative. I recommend that:

- The BLM should ensure that these large solar projects are built primarily in the pre-screened, low-conflict zones;
- The BLM should ensure that counties have a major role in designating future solar energy zones; and
- The BLM should provide a 60 day comment period on the final plan to allow public response to additional information in the final plan.

By focusing on low-conflict zones, the BLM can ensure that solar development avoids the conflicts and controversy that have plagued oil and gas development on public lands throughout the rural west. I urge you to take this common-sense approach that will allow solar development that is faster, cheaper and better for the environment, consumers and our western counties.

Thank you for considering my concerns.

Sincerely,

Gary Wyatt

RE: Comments on Supplement to the Draft Programmatic Environmental Impact Statement for Solar Energy Development in Six Southwestern States

Dear Ms. Stewart,

Included with this letter are comments on the Bureau of Land Management's (BLM's) and the Department of Energy's (DOE's) jointly prepared Supplemental Programmatic Environmental Impact Statement (SPEIS) for Solar Energy Development in Six Southwestern States, submitted by activists of the Sierra Club. Included with this letter is a CD containing the following items:

- (i) A PDF copy of the form letter executed by 8,342 activists (the "Unedited Form Letter"),
- (ii) A PDF copy of the spreadsheet with the names and addresses of each of the 8,342 activists who signed the Unedited Form Letter ("SC Unedited Form Letter Spreadsheet"), and
- (iii) A zip file containing two (2) separate files containing rich text copies of letters edited by activists.

I am sending a copy of this letter via email with PDF copies of the above documents.

Thank you so much for the opportunity to allow our activists to provide comments on the SPEIS.

Sincerely,

Sarah K. Friedman
Senior Campaign Representative,
Beyond Coal Campaign
Sierra Club
714 West Olympic Blvd. Suite 1000
Los Angeles, CA 90015

Dear Secretary Salazar,

Thank you for the opportunity to comment on the Supplement to the Draft Programmatic Environmental Impact Statement for Solar Energy Development in Six Southwestern States. I am submitting these comments as someone with a strong commitment to developing renewable energy. I believe it is critical we halt climate change and end our dependence on fossil fuels as quickly as possible. However, I also care deeply about preserving our precious Western ecosystems and wild lands.

I strongly support developing rules to guide solar energy projects on the most appropriate locations on public lands to minimize impacts to wildlife and ecosystems. These rules should be applied to all solar energy applications on public lands, not just those filed after October 28, 2011. Your proposal to allow additional projects outside zones (the "Variance Process") could undermine this entire solar energy program if it is not limited to places with low environmental value. These proposals should meet strict environmental criteria.

I also commend the BLM for excluding fragile and ecologically important areas from solar development in response to environmental concerns ("Exclusion Areas"). Please expand the Exclusion Areas to include environmentally sensitive areas important to the survival of wildlife species such as: wildlife habitat management areas, desert tortoise connectivity areas, and the entire Ivanpah Valley in both Nevada and California.

Thank you for working to balance our need for solar energy with protecting wildlife and habitats on public land.

Sincerely,

NATIONAL PARKS CONSERVATION ASSOCIATION SolarS_023
Protecting Parks for Future Generations

January 27, 2012

Solar Energy EIS
Argonne National Laboratory
9700 S. Cass Avenue – EVS/240
Argonne, IL 60439

Dear Shannon Stewart:

Please accept the following comments about the Solar PEIS Supplement on behalf of the National Parks Conservation Association. The comments are a result of a national alert from our organization and a Care 2 Community Alert.

The comments are contained on the attached disk and you will notice that each respondent has directed correspondence to both Secretary of Energy Stephen Chu and Secretary of the Interior Salazar.

Thank you very much for the opportunity to comment on the Solar PEIS Supplement. If you have further questions, please feel free to contact me.

Sincerely,

Seth Shteir, California Desert Field Representative
National Parks Conservation Association
Joshua Tree, California 92252
sshteir@npca.org
760-332-9776

California Desert Field Office, 61325 Twentynine Palms Highway, Suite D.
Joshua Tree, CA, 02252
Telephone (760) 366-7785 • Fax (760) 366-3035

Jan 24, 2012

Steven Chu
U.S. Dept. of Energy, 1000 Independence Ave, SW
Washington, DC 20585

Subject: Protect Parks in the Southwest from Poorly Sited Solar Energy Development

Dear Steven Chu,

I support solar development, but not at the expense of our national parks and conservation heritage. To help ensure parks are protected, I ask that you exclude new solar development on lands within 15 miles of national park units unless the National Park Service determines these lands are suitable for consideration under the variance process and can be developed without damaging park resources.

This precautionary "smart from the start" approach is justified because these lands are critical to the ecological health of park resources and the experience of park visitors.

Without strong safeguards in place, vast solar energy facilities could potentially be built under the variance process and present the following threats:

--Fragmentation of wildlife corridors crucial to wide-ranging species. Examples include lands on Joshua Tree's north and northeast boundaries that are utilized by Desert Tortoises and connect the park to nearby wilderness areas. Also, allowing solar development in old-growth Joshua Tree woodlands, such as what could happen north of Mojave National Preserve's Clark Mountains and east of the Preserve's New York Mountains should be avoided.

--Harming scenic vistas. By placing solar projects on our national parks' doorsteps, we will negatively affect the experience so many Americans cherish. For instance, industrializing Death Valley's eastern boundary could negatively affect the parks stunning wide open vistas, as well as reduce habitat and water resources for rare and endangered species.

I thank you for considering my comments and for working to ensure America's national parks and surrounding sensitive lands are protected.

Respectfully,

NATURAL RESOURCES DEFENSE COUNCIL

Katie Umekubo
Western Renewable Energy Project Attorney

Solar Energy Draft PEIS
Argonne National Laboratory
9700 S. Cass Avenue
EVS/240
Argonne, Illinois 60439

Re: Comments on the Supplement to the Draft Programmatic Environmental Impact Statement for Solar Energy Development in Six Southwestern States, 76 Fed. Reg. 66958-66960 (October 28, 2011)

Dear Mr. Nedd,

Enclosed is a CD of 12,504 comments submitted by NRDC online activists regarding the Supplement to the Draft Programmatic Environmental Impact Statement for Solar Energy Development in Six Southwestern States.

If you have any questions, please feel free to contact me at (202) 717-8194.

Thank you.

Sincerely,

Katie Umekubo

Ken Salazar, Secretary of the Interior
Arlington, VA

Subject: Solar Energy Development Programmatic EIS

Dear Ken Salazar, Secretary of the Interior,

Our nation must transition from a dirty fossil fuel-based economy to one that runs on clean energy. But we must ensure that the development of large-scale renewable power plants on our public lands is done right -- by protecting our wildlife, wildlands and water resources.

The Supplement to the draft Solar Energy Development Programmatic Environmental Impact Statement is a step in the right direction and I urge you to follow through on your commitment to zone-based development of large-scale solar projects on the deserts of the Southwest. Guiding solar development to appropriate places is the best way to ensure that the benefits of solar energy are realized while also safeguarding our public wildlands.

Currently, the solar resources of our public lands are being managed on the same antiquated project-by-project basis that oil and gas resources have been managed. Continuing this scatter-shot approach and permitting these very large projects to be dotted across our public lands is certain to harm sensitive wildlife species and diverse recreational opportunities, and will also lead to costly conflicts, delays and litigation at a time when solar energy is needed to improve our energy security and provide much-needed jobs.

I commend you for recognizing the need for a better way to develop solar projects, by designating zones that minimize conflicts with wildlife and other resources and providing incentives for projects located in these zones. I also appreciate your recognition of the need to provide limited flexibility to the solar industry for well-sited projects outside zones. Adoption of these and other proposed program components will help protect the unique and sensitive resources of our public lands while providing more certainty to all stakeholders.

By focusing on the places that have the best chances for success and having a clear plan to deal with potential impacts before they occur, we will be able to move quickly to develop our solar resources. This will enable America to better meet our clean energy demands while also preserving our nation's wildlife, wild lands and other natural treasures. Please continue on the path to finalize a comprehensive and environmentally sound framework for developing solar energy on our public lands in an environmentally sensitive way -- as promptly as possible.

Sincerely,

Board of Supervisors

Santa Cruz County

RUDY MOLERA
District 2

Bureau of Land Management
Solar Energy Draft PEIS
Argonne National Laboratory
9700 S. Cass Avenue—EVS/240
Argonne, IL 60439

Dear Ms. Stewart:

I am writing to provide comments on the Supplement to the Draft Solar Energy Programmatic Environmental Impact Statement.

Counties like mine in the West have a long relationship with the public lands. We have a historic opportunity to improve the way solar resources are developed on public lands. The long-term plan for solar energy development now being considered, the Supplement to the Draft Solar Programmatic Environmental Impact Statement (PEIS), will help shape future energy development and land use across the public lands of the west.

I applaud the BLM in responding to recommendations from the public to focus development in pre-screened, low-conflict zones. Overall, the Supplement is a step in the right direction, and most of the elements should be carried through the final plan. However, I believe the plan should provide additional incentives for building projects in low conflict zones and avoid development on public lands that are important for wildlife, recreation, tourism and other uses by County residents and visitors.

To ensure that solar development on public lands is smart from the start, I support most of the plan as laid out in the revised Preferred Alternative. I recommend that:

- The BLM should ensure that these large solar projects are built primarily in the pre-screened, low-conflict zones;
- The BLM should ensure that counties have a major role in designating future solar energy zones; and
- The BLM should provide a 60 day comment period on the final plan to allow public response to additional information in the final plan.

By focusing on low-conflict zones, the BLM can ensure that solar development avoids the conflicts and controversy that have plagued oil and gas development on public lands throughout the rural west. I urge you to take this common-sense approach that will allow solar development that is faster, cheaper and better for the environment, consumers and our western counties.

Thank you for considering my concerns.

Sincerely,

Rudy Molera, Chairman
Santa Cruz County
Board of Supervisors

Ms. Stewart:

I am the elected Supervisor for the Board of Supervisors, District 4 in Pima County, Arizona and I have had the honor of serving in this role since 1997. The purpose of this letter is to provide comments on the Supplement to the Draft Solar Energy Programmatic Environmental Impact Statement, specifically encouraging projects being built in low-conflict zones.

Arizona has a long history with public lands and I represent several including the Saguaro National Park. The Bureau of Land Management (BLM) has a wonderful opportunity to improve how we develop solar resources on public lands.

I am very pleased the BLM will be focusing development in pre-screened, low-conflict zones. However, I believe we should provide additional incentives for building projects in low-conflict zones. Primarily, the BLM should ensure that counties play a major role in designating future solar energy zones. All large solar projects are built primarily in the prescreened, low-conflict zones, and provide a 60-day comment period on the final plan to allow public response to additional information in the final plan.

BLM can make certain solar energy developers avoid the conflicts that have plagued the oil and gas industries on public lands by pursuing low-conflict zones. I encourage you to take this common sense approach towards solar development.

Sincerely,

A handwritten signature in black ink, appearing to read "Ray Carroll".

Shannon Stewart

Subject: Please revise the Solar Energy Draft PEIS

Dear Shannon Stewart,

As part of a clean energy future that includes robust commitments to energy efficiency and conservation, and widespread use of rooftop solar panels, I support environmentally responsible solar projects on our public lands. If done smart from the start, renewable energy development on public lands can both help meet our climate and clean energy needs and protect our beloved wildlands and crucial wildlife habitat.

We have a historic opportunity to get solar development right on public lands, and the long-term plan for solar now under development, the Supplement to the Draft Solar Programmatic Environmental Impact Statement (PEIS), will play a critical role. I applaud the BLM in responding to recommendations from the public to focus development in pre-screened, low-conflict zones. Overall, the Supplement is a step in the right direction, and most of the elements should be carried through the final plan. However, I am seriously concerned that the revised plan still leaves some wilderness quality lands open for development. To ensure that solar development on public lands is smart from the start, I recommend that:

- The BLM should carry forward most of the revised plan;
- The BLM should exclude all Citizens' Wilderness Proposal lands (wilderness quality lands) from development;
- The BLM should ensure that these large solar projects are built primarily in the zones;
- The BLM should provide a 60 day comment period on the final plan to allow public response to additional information in the final plan.

By focusing on low-conflict zones, the BLM can ensure that solar development avoids the many conflicts, controversies and impacts that have plagued oil and gas development on public lands. I urge you to take this common-sense approach that will allow solar development that is faster, cheaper and better for the environment and consumers.

Sincerely,

From: Kenita L. Ensworth [<mailto:kenitalensworth@beamspeed.net>]

Subject: Comments on the Supplement to the Draft Solar PEIS

Attached are the comments of Carolyn Allen and Donna Tisdale for the Supplement Draft Solar PEIS.

January 26, 2012

Comments on the Supplement to the Draft Solar PEIS

These comments are made by Carolyn Allen for myself and on behalf of my sister, Donna Tisdale, who also represents Backcountry Against The Dump (BAD) and as members of the Protect Our Communities Foundation (POC).

At numerous public hearings and meetings my sister, Donna Tisdale, and I have spoken out in opposition to the placement of large scale solar and wind projects on our nation's agricultural lands and the countries open spaces. Solar wind projects offer short term employment during construction but only a few long term jobs. The farmland provides not only long term jobs for farmers and their employees but the land also supports a large number of related ag-businesses. See article: "Agriculture will add 180,000 California Jobs" by Kate Campbell Ag Alert November 9, 2011 pg 7

There is a domino effect of agricultural businesses and their employees losing jobs when farmland is taken out of production.

Projects on BLM ground will affect farmlands because of the transmission and other infrastructure used for these projects. These projects are using federal funds and land therefore they should abide by the USDA Farmland Protection Policy Act.

Our open spaces and back country provide soothing relief for our souls from our fast-paced jam-packed lifestyles. These open areas provide recreational opportunities, a time and place to bond with family and friends, and create memories that will last a lifetime. Rural residents will suffer huge adverse impacts from both the close proximity of solar and wind projects to them as well as the encroachment of transmission lines and the use of eminent domain.

Both our open areas and the crops on our farmland provide habitat for wildlife, many of which are either threatened or endangered. These open spaces and farmlands are irreplaceable.

Page 1-2 of the Supplement stated that "some environmental groups' comments on the Draft Solar PEIS expressed concerns for and identification of categories of land they felt should be excluded from development". We feel that not enough focus has been placed on preserving our open spaces and farmland. Page 1-3 of the Supplement says that commenters expressed a preference for distributed energy and community based energy solutions over utility scale projects requiring long distance transmission affecting local communities and quality of life and potentially resulting in higher future energy costs for consumers. Higher costs of solar and wind is shown in the eia U.S. Energy Information Administration table: Estimated Levelized Cost of New Generation Resources. Solar and wind are more expensive forms of energy. (www.eia.gov/forecasts/aeo/electricity_generations.cfm). We whole heartedly agree with these comments. Rooftops of homes or businesses that will be using the energy is the best location for solar. Not in some remote location where it's necessary to transport that energy long distances.

THE CITIES WILL GET THE RENEWABLE ENERGY OUR FARMING COMMUNITIES AND RURAL COMMUNITIES WILL GET ALL OF THE NEGATIVE IMPACTS!

Page 1-5 section 1.4 BLM decisions to be made #3 refer to “Land use plan amendments that identify priority areas for solar energy development that are well suited for utility scale production of solar energy (ie: SEZS)”. One such SEZ is the Desert Renewable Energy Conservation Plan (DRECP) in southern California. Areas within these SEZ’s will suffer huge negative impacts due to the consolidation of so many projects into one area. This is not being fully addressed.

Page 1-6 1.5.1 “NEPA dictates that Federal agencies take a proposed action. The requisite environmental analysis performed by an agency must be commensurate with the action in question”. There should be more due diligence in assessing the true impacts of these projects. We dispute the claim that “the Solar PEIS appropriately evaluates the potential direct, indirect and cumulative environmental, social and economic effects of establishing broad Solar Energy Program elements and strategies across 6 state study area”. “Because the depth and detail of the impact analysis are fairly general, focusing on major impacts...” many other impacts are being overlooked. There seem to be numerous CEQA violations on projects that are being approved in the DRECP proposed area.

The supplement also says that comments pointed out RFDS calculations do not account for the import and export of solar generated electricity between states and underestimated development in a given state. Living in southern California we feel that this applies to our area and will adversely affect us.

Section 1.8.2 states other commenters expressed the need to provide public opportunities for public comments and input on solar and wind energy projects proposed for public land. We agree.

Page 2-4 of the Supplement Due Diligence – Applicant Qualifications Section. #3 “Applicants in bankruptcy or with other financial difficulties would generally present financial risks and should be required to provide additional information regarding financial capability”. No, they should be automatically denied if they are in bankruptcy or financial difficulties. These are projects that are receiving tax payers’ money. Don’t place more of our tax dollars at risk. We don’t need or want more Solyndras. See “What Solyndra Fiasco?” Wall Street Journal 9/29/2011.

Page 2-13 of supplement section 2.2.1.2 Adaptive Management and Monitoring. “As described in the Draft Solar PEIS Appendix A Section A 2.1.1 the BLM (recognizing that data regarding the actual impacts of solar energy development on various resources are still limited)”. In light of this recognition of limited data on impacts, wouldn’t it be wiser and in the best interest of the public good to delay approval of these projects until more information can be obtained?

Page 2-23 of Supplement 2.2.2.2.3 Incentives for Projects Facilitation of the permitting process will lead to oversight of potential problems caused by rushing proposed projects. The fact that the DOI will provide a single point of contact limits the checks and balances of multiple contacts. A one size fits all approach does not improve mitigation. By facilitating the permitting of needed transmission to SEZ the BLM will be party to the negative impacts forced upon those living in the SEZ’s.

Section entitled: Provide Economic Incentives for DEV in SEZ.

The six point incentive plan benefiting developers means taxpayers will get less in return for an already risky, high cost, controversial use of our tax dollars. No incentives!

Page 9-1-277 of Draft Solar PEIS. Moving on to discuss the Cumulative Impact Section Upgrades to IID 230-KV transmission Line; Upgrades for IV Solar Projects Transmission and the Sunrise Powerlink. The impacts as a whole of all these solar projects and these transmission infrastructures on such a small area are not adequate evaluation. Impacts on our threatened and endangered wildlife such as Burrowing Owls, Yuma Clapper rail, Flat-tailed Horned Lizard and Golden Eagle should not, and in truth, cannot just be mitigated away. Also the cumulative impacts to our water resources are not completely addressed.

These projects as a whole will have very significant cumulative impacts that are not being recognized.

Other concerns:

1. Agencies are approving industrial projects in areas not suited for such purposes.
2. These projects as a total will have a huge adverse impact on our electrical grid causing it to be overloaded and unstable.
3. Back up energy is needed to balance these wind and solar projects and is not being fully considered.
4. Projects are being proposed and approved that have CEQA violations and possible NEPA violations.
5. These projects are destroying habitat for wildlife many that are threatened or endangered.
6. The best plan would be distributed energy (rooftop solar and rooftop wind devices). Distributed generation offers more security. A huge grid network is vulnerable to attack or human error as in the recent black out affecting California and Arizona.
7. Concerns about flawed water assessment studies not showing how big the impacts will actually be.
8. The health and safety of our citizens could be harmed by exposure to EMF (electromagnetic fields) and RFR (radio frequency radiation). A New Electromagnetic Exposure Metric: High Frequency Voltage Transients Associated With Increased Cancer Incidence in Teachers in a California School. By Samuel Milham, MD, MPH and L. Loyd Morgan, BS. From the American Journal of Industrial Medicine (2008). Effects of Excessive Electrical Exposure on Human and Animal Health. In Shocking News 9/13/2007.
9. Our already compromised air quality will be further damaged by these projects. The impacts not only include construction issues but removal of the vegetation that sequesters carbon and takes in CO2 and release oxygen. The loss of this vegetation will affect our air quality.

Thank You,

Carolyn Allen

January 23, 2012

Robert Abbey, Director
Bureau of Land Management
1849 C Street NW, Room 5665
Washington, D.C. 20240

Dear Director Abbey:

The Public Lands Foundation appreciates the commitment you and your staff, along with the Department of Energy and Argonne National Laboratory, have made by providing a supplement to the Draft Programmatic Environmental Impact Statement (DPEIS) on Solar Energy Development in Six Southwestern States. We believe it presents a clearer picture of what is proposed and it has improved by keeping projects in low impact zones.

As you know, the Public Lands Foundation is a national non-profit conservation organization formed in 1987 that advocates and works for the retention of the National System of Public Lands in public hands, professionally and sustainably managed for the responsible common use and enjoyment of the American people. Our members are predominantly retired former BLM employees with many years of experience in natural resources management.

On March 17, 2011, we provided comments on the Solar Energy DPEIS. We are pleased to see that many of the suggestions we made at that time have been taken into consideration and have resulted in what we believe are positive changes in the revised Preferred Alternative.

We are pleased to see that the Preferred Alternative has been reduced from nearly 22 million acres to 17 solar energy zones totaling about 285,000 acres potentially available for development. We see this as a much more reasonable approach that will concentrate development in low-impact areas and minimize resource conflicts.

We support the establishment of a process for adding new zones in the future. And, we are pleased to see that the BLM is undertaking a rulemaking process to establish a competitive leasing process for all solar and wind development.

We also are pleased to see that the Arizona BLM's Restoration Design Energy Development Project will be incorporated in the Solar Energy Program. We again suggest, however, that the Arizona approach be applied for areas outside the solar energy zones in all six states; not just Arizona. As we stated in our previous correspondence, this approach considers suitable disturbed lands across all ownerships and is a much better approach for considering additional new development areas. This approach is very reasonable, focuses on disturbed lands, and will provide greater certainty for potential developers by eliminating much of the conflict.

Thank you for the opportunity to provide input.

Sincerely,

Henri Bisson, President

For America's Heritage

Public Lands Foundation

 Solar Energy Draft PEIS
 Argonne National Laboratory
 9700 S. Cass Avenue—EVS/240
 Argonne, IL 60439

Dear Ms. Stewart,

I am writing to provide comments on the Supplement to the Draft Solar Energy Programmatic Environmental Impact Statement.

Counties like mine in the West have a long relationship with the public lands. We have an historic opportunity to improve the way solar resources are developed on public lands. The long-term plan for solar energy development now being considered, the Supplement to the Draft Solar Programmatic Environmental Impact Statement (PEIS), will help shape future energy development and land use across the public lands of the west.

I applaud the BLM in responding to recommendations from the public to focus development in pre-screened, low-conflict zones. Overall, the Supplement is a step in the right direction, and most of the elements should be carried through the final plan. However, I believe the plan should provide additional incentives for building projects in low conflict zones and avoid development on public lands that are important for wildlife, recreation, tourism and other uses by County residents and visitors.

To ensure that solar development on public lands is smart from the start, I support most of the plan as laid out in the revised Preferred Alternative. I recommend that:

- The BLM should ensure that these large solar projects are built primarily in the pre-screened, low-conflict zones;
- The BLM should ensure that counties have a major role in designating future solar energy zones; and
- The BLM should provide a 60 day comment period on the final plan to allow public response to additional information in the final plan.

By focusing on low-conflict zones, the BLM can ensure that solar development avoids the conflicts and controversy that have plagued oil and gas development on public lands throughout the rural west. I urge you to take this common-sense approach that will allow solar development that is faster, cheaper and better for the environment, consumers and our western counties.

Thank you for considering my concerns.

Sincerely,

Re: comments on Supplement to the Draft Solar Energy PEIS

Dear Sirs:

Thank you for the opportunity to provide comments on the Supplement to the Solar Energy Draft PEIS. We feel that it is significantly improved over the Draft PEIS but that it is still deficient in several aspects.

The document fails to recognize and take into account the fact that the solar energy industry is changing and consolidating at a very rapid rate. Much of the PEIS will be outdated within five years. The price of photovoltaic panels has decreased so rapidly that it is questionable whether solar thermal technology will be cost competitive going forward. A consequence of the decreasing price for photovoltaic panels is that distributed generation is becoming more competitive every day. It is extremely disappointing to us that distributed generation of photovoltaic solar energy was not considered in any analysis. Dedicating hundreds of thousands of acres of public land to solar energy production in some of the least disturbed areas of our country without even considering the viability and advantages of on-site energy production and utilization via photovoltaic generation is a serious omission.

We agree that Solar Energy Zones are a reasonable way to direct developers to areas of lesser impact and conflict. However, we are both surprised and astounded that in addition to the Zones there are still some twenty million acres of BLM land that will be considered for solar energy production. This doesn't make sense. Many of the areas outside the Zones are important wildlife habitat or corridors for wildlife movement and are relatively pristine. In addition some of these areas would qualify as wildlands under the now suspended Wildlands Policy.

The issue of transmission and the costs and technical difficulties involved in transmitting electricity from remote areas to load centers has not been addressed adequately. Projects not only should be located in Zones but need to be encouraged to cluster there so that the cost of constructing transmission lines and substations is minimized. We are being told that the cost of a substation to interface with a 500KV powerline is in the range of 80 – 120 million dollars. At that cost it is not feasible to build single isolated solar energy generating facilities except at a very large scale and this doesn't make sense for most of the 20 million acres available by variance.

This document needs to have a stated shelf life and a stated date when it will be updated.. Not only are technologies and associated costs evolving very rapidly, but there are enough applications for building sites on BLM land which have already been submitted to bog down the application process. The time to build out the projects already applied for will take several years. Hence, this planning process will be obsolete very soon. We feel that it is critical to not make bad, and essentially irreversible, decisions with regard to allocation of undeveloped public land in an era when the situation with regard to energy production is rapidly changing.

Sincerely,

January 23, 2012

Mr. Edwin Robinson, Assistant Director
Renewable Resources and Planning
Bureau of Land Management
1849 C Street NW, RM 5644
Washington, DC 20240

Dear Mr. Robinson:

This letter is on behalf of the Mohave County Board of Supervisors to express the Board's concern over the process the Bureau of Land Management used to prepare the Solar Development Programmatic Environmental Impact Statement for the six southwestern states. Mohave County believes that utility-scale solar projects have the potential for substantial effects on Arizona counties, whether entirely located on federal lands or on a combination of private and federal lands. The Board believes that the Bureau of Land Management failed to adequately consult with local governments, as required by NEPA, during the preparation of the draft PEIS.

The description of past public involvement opportunities states that "[d]uring the original scoping period (May 29-July 15, 2008), the Agencies invited interested Federal and State agencies, organizations, Native American tribes, and members of the public, to submit comments or suggestions to assist in identifying significant environmental issues and in determining the scope of this PEIS. The public scoping period started with the publication of the Notice of Intent in the Federal Register and ended July 15, 2008." It is unclear what level of effort was made to include local governments, such as Mohave County, at that early stage as local governments are notably missing from this statement.

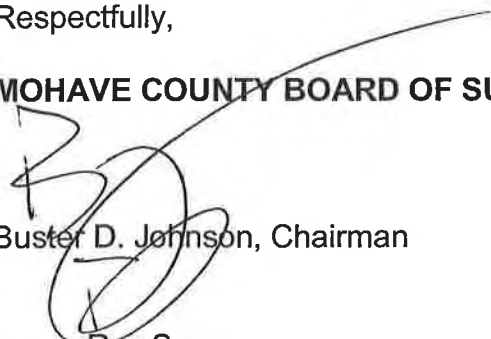

Mohave County is the 5th largest county in the lower 48 states and has considerable land that is suitable for renewable energy development. The county has established policies and procedures that would encourage development of renewable energy projects. Some proposals that have been discussed have included both private and public lands. Due to the large proportion of federal lands in Mohave County, and the land ownership patterns involved, it is important to Mohave County that the federal policies established in the PEIS will not conflict with the policies of the County or inhibit its ability to meet its fiscal and social responsibilities.

Of particular concern to Mohave County is the potential for land exchanges and possible effects on the County's policies for land development, economic development or fiscal stability. Removal of private property from the County's tax base through exchanges has the potential for significant effects on the fiscal stability of the County. The land ownership in Mohave County consists of approximately 61% by BLM and U.S. Forest Service, 7% by the State of Arizona, and approximately 18% is held privately. Projects in areas of checkerboard land ownership patterns, near the boundaries between federal and private ownership, and mixed federal and private land projects, have potential for conflict between the County's policies for land development and economic development. The County does not oppose Federal land for the use of Solar, but we adamantly oppose the requirement that an equal or greater amount of fee simple land must be purchased and given to the federal government to offset their use, thus reducing the county tax base and economic opportunity for our citizens.

Because this proposal is not site specific, it is difficult to evaluate whether it would help or hinder the policies of Mohave County. As "step-down" plans or specific proposals are made for projects, whether entirely on federal land or on a combination of private and federal land, Mohave County expects to be actively consulted by the Agency early and often. BLM, state and district offices should assume that Mohave County intends to be an active cooperating agency in the NEPA process. Our objective is to ensure the coordination of the Agency planning processes with Mohave County's land use plans, Mohave County fiscal policies, and the county has meaningful involvement as a cooperating agency.

Respectfully,

MOHAVE COUNTY BOARD OF SUPERVISORS

Solar Energy Draft PEIS
Argonne National Laboratory
9700 S. Cass Avenue – EVA/240
Argonne, IL 60439

January 27, 2012

To Whom it May Concern:

I write to provide comments on the Supplement to the Draft Solar Energy Programmatic Environmental Impact Statement.

Counties in the Western states have a long and intimate relationship with public lands. The long-term plan for solar energy development that the Bureau of Land Management (BLM) now has on the table, the Supplement to the Draft Solar Programmatic Environmental Impact Statement (PEIS), will help shape future energy development and land use across Western public lands.

I applaud the BLM for responding to earlier public recommendations, to now focus utility-scale solar development on pre-screened, low-conflict zones. Overall, the Supplement is a step in the right direction, and most of the elements should be retained in a final plan. However, I encourage you to provide additional incentives for building utility-scale solar projects in low-conflict zones and to avoid such development on public lands that are important for wildlife, recreation, tourism and other vital uses.

I support most of the plan in the revised Preferred Alternative. But I recommend that the BLM:

- Ensure that utility-scale solar projects are built primarily in the pre-screened, low-conflict zones;
- Require that those proposing utility-scale solar projects be subject to and comply with all applicable regulatory requirements of local jurisdictions and withhold Notices to Proceed with such proposals pending completion of all requirements of a local, state or other federal entity;
- Remove from the PEIS list of properties identified for potential utility-scale solar development those lands upon which a county has a grazing lease for the purpose of open-space preservation or of natural-resource conservation;
- Ensure that counties have a defined, major role in designating future solar energy zones; and
- Provide a 60-day comment period on the final plan.

By focusing on low-conflict zones, the BLM can ensure that solar development avoids the conflicts and controversy that have plagued oil and gas development on public lands in the rural West. I urge you to take this common-sense approach to allow solar development that is faster, cheaper and better for the environment, for consumers and for our Western counties. Thank you for considering my concerns.

Sincerely,

Richard Elías

Attn.: Shannon Stewart
Solar Energy Draft PEIS
Argonne National Laboratory
9700 S. Cass Avenue—EVS/240
Argonne, IL 60439

Dear Ms. Stewart,

I am writing to provide comments on the Supplement to the Draft Solar Energy Programmatic Environmental Impact Statement. Counties like mine in the West have a long relationship with the public lands. We have an historic opportunity to improve the way solar resources are developed on public lands. The long-term plan for solar energy development now being considered, the Supplement to the Draft Solar Programmatic Environmental Impact Statement (PEIS), will help shape future energy development and land use across the public lands of the west.

I applaud the BLM in responding to recommendations from the public to focus development in pre-screened, low-conflict zones. Overall, the Supplement is a step in the right direction, and most of the elements should be carried through the final plan. However, I believe the plan should provide additional incentives for building projects in low conflict zones and avoid development on public lands that are important for wildlife, recreation, tourism and other uses by County residents and visitors. To ensure that solar development on public lands is smart from the start, I support most of the plan as laid out in the revised Preferred Alternative. I recommend that:

- The BLM should ensure that these large solar projects are built primarily in the pre-screened, low-conflict zones;
- The BLM should ensure that counties have a major role in designating future solar energy zones; and
- The BLM should provide a 60 day comment period on the final plan to allow public response to additional information in the final plan.

By focusing on low-conflict zones, the BLM can ensure that solar development avoids the conflicts and controversy that have plagued oil and gas development on public lands throughout the rural west. I urge you to take this common-sense approach that will allow solar development that is faster, cheaper and better for the environment, consumers and our western counties. Thank you for considering my concerns.

Sincerely,

A handwritten signature in blue ink, appearing to read "Steven Acquafresca".

Subject: Supplement to the Draft Programmatic Environmental Impact Statement for Solar Energy
RDCC Project Number: 29459

Dear Ms. Summerson:

The State of Utah appreciates the opportunity to review the Supplement to the Draft Programmatic Environmental Impact Statement for Solar Energy Development, and to provide the following comments.

Office of Energy Development

The Utah Office of Energy Development (OED) serves as the primary resource for advancing energy development in Utah. OED implements policy for the Governor, Legislature, and the State of Utah by promoting the goals and strategic objectives outlined in Governor Herbert's 10 Year Strategic Energy Plan.¹

According to the Draft Solar PEIS, Utah contains over 2 million acres of Bureau of Land Management (BLM) lands that are potentially developable under the Solar Energy Development Alternative.² The Utah REZ Phase 1 report identifies vast solar resources in the state covering 6,371

¹ *Energy Initiatives and Imperatives: Utah's 10 Year Strategic Energy Plan*, March 2011.

² Draft Solar PEIS, Chapter 2, 2-3.

square miles and containing the technical potential for 16,500 fifty-Megawatt sites.³ Cost-effective solar energy generation will play a significant role in Utah's Renewable Portfolio Goal (RPG) of renewables accounting for 20% of adjusted retail electric sales by utilities by 2025. Governor Herbert identified energy as one of the Four Cornerstones necessary to strengthen the state's economy. The Governor promises to aggressively pursue innovations in energy development. Siting solar generating facilities on public land will help Utah achieve its energy goals and ensure the state's continued economic development through the use of clean energy resources.⁴

Momentum is growing in Utah to capitalize on its abundant solar resources. The state is committed to improving transmission capabilities, streamlining regulatory programs, implementing development incentives, and establishing collaborative partnerships and agreements to facilitate solar development. Energy amendments planned for introduction during the 2012 legislative session would create expanded markets for solar energy. Utah's Military Installation Energy Collaborative (MIEC) teams the Office of Energy Development with the Department of Defense to explore ways renewables can help to promote energy security at military installations in Utah.

Lands managed by the Department of the Interior (DOI) play an important role in the growth of renewable energy development in Utah. One of the primary objectives of BLM's proposed Solar Energy Program is to "facilitat(e) near-term utility-scale solar energy development on public lands."⁵ Secretary Salazar's policy goal in E.O. 3285 is the identification and prioritization of areas well suited for large scale production of solar energy on public land.⁶ The BLM's Renewable Energy Action Teams (REATs) coordinate renewable energy permitting actions with governors and state agencies. The Office of Energy Development is actively reviewing BLM's proposed REAT for Utah. The REAT model seems to be a good fit for Utah, as it ties its objectives clearly to the energy priorities and recommendations contained in the state's 10 year Strategic Plan.

The Preferred Alternative (the Modified Program Alternative) appears to be the alternative best suited to meeting the solar development objectives identified under BLM's Solar Energy Program. Focusing solar projects in areas that have fewer resource conflicts will facilitate development and decrease the timeline for project start-up. The variance process for siting projects on non SEZ lands will provide some flexibility for developers who believe that alternative areas provide good opportunities for solar generation.

³ *Utah Renewable Energy Zones Task Force Phase 1 Report*, pg. 15.

⁴ *Energy Initiatives*, pg.3.

⁵ Supplement to the Draft Solar PEIS, Chapter 1, 1-4.

⁶ Secretarial Order 3285, March 11, 2009.

While OED believes the three Utah SEZs identified by the Draft PEIS provide a good starting point for increased solar generation in the state, these SEZs represent a smaller percentage of lands than identified by comparable studies as suitable for utility-scale solar generation.⁷ As currently proposed, the variance application requirements for a cost recovery account could prove prohibitive for developers.⁸ BLM's commitment to identifying new SEZs is critical to a viable solar energy market in Utah and the West.

Land use plans provide an excellent opportunity for the BLM to analyze potential solar energy zones.⁹ Current planning efforts for the Cedar City RMP offer the BLM and the state, as a cooperating agency, the opportunity to discuss inclusion of additional/expanded SEZs in the planning area. The three proposed Utah SEZs are covered under this RMP. Further analysis may demonstrate the need to augment these SEZs or create additional SEZs.

The *Proposed Identification Protocol for New Solar Energy Zones* contained in Appendix D of Supplement contains useful criteria for analyzing additional SEZs. The Protocol states that

“New or expanded SEZs should be identified in the context of existing solar market conditions, existing and planned transmission systems, and new state or federal policies affecting the level and location of utility-scale solar energy development. The BLM will...periodically review the need for additional public lands for solar development...”¹⁰

The proposed petition process for assessments of need recognizes that significant changes can indeed take place between the prescribed five year minimum assessment periods. Among the issues raised in the Western Governors Association (WGA) Report on WREZs was the “complexity and length of resource planning and procurement processes (that) do not match the short timelines for developing renewable energy projects, making it difficult to take advantage of time limited opportunities.”¹¹ Having SEZs identified will aid in coordinated resource procurement, transmission planning, and resource development, supporting market growth.

Recent developments in Utah and the West highlight the need for more frequent assessments:

- Amendments to the Energy Resource Procurement Act will be introduced during the 2012 state legislative session which would allow large end-users of electricity to purchase

⁷ *The UREZ Phase II Task Force Zone Identification and Scenario Analysis*

⁸ Supplement to the Draft PEIS, Chapter 2, 2.2.2.3.1, pg. 2-34.

⁹ Appendix D: Proposed Identification Protocol for New Solar Energy Zones, Draft Solar PEIS.

¹⁰ *Ibid*, D-1

¹¹ *Renewable Resources and Transmission in the West: Interviews on the Western Renewable Energy Zones Initiative, October 18, 2011, pg. ix.*

renewable energy from a private generator through back-to-back contracts with that generator and the local utility. This measure would provide these customers with greater energy security than is currently available through conventional energy generation sources, and significantly expand the market for solar in Utah.

- Proposed statutory changes to Utah's Alternative Energy Development Incentive (AEDI) program would shift the emphasis from job creation to energy, making it more beneficial to developers of solar generation projects.
- Utah's Military Installation Energy Collaborative (MIEC) is working in partnership with Hill Air Force Base, Camp Williams, Tooele Army Depot, Dugway Proving Grounds, and Utah National Guard facilities to achieve energy security through the use of renewables. Military demand for solar generated power is expected to create a significant market for solar energy in the state.
- Increased government and industry recognition of the importance of large scale renewable energy storage has led to growing efforts to develop large scale Compressed Air Energy Storage (CAES) and Closed Loop Pump Storage (CLPS) in Utah's West Desert region.
- The Western Governors Association (WGA) announced plans last week to improve electric transmission permitting, including the hiring of a permitting consultant and development of a white paper on the barriers to lowering the cost of integrating solar and wind power into the grid.

The Proposed Protocol also states that "the BLM will rely on outside expert consultation regarding electricity demands, markets, and renewable energy."¹² The *UREZ Phase II Task Force Zone Identification and Scenario Analysis* is an exhaustive study of renewable energy resources in the state. Prepared by Black and Veatch and developed in conjunction with UREZ Task Force and Technical Working Group, the report

- Identifies policies or market mechanisms that would facilitate transmission planning and permitting for renewable energy projects
- Quantifies cost-effective generation potential
- Identifies necessary resources to bring transmission to market

The report also identified 27 Renewable Energy Zones (REZs) using environmental and feasibility criteria comparable to that used by the BLM in its SEZ selection process. As policies, transmission permitting, and markets become more favorable to solar energy generation and distribution, these scenarios, conceptual transmission grids, and REZs can provide invaluable information going forward. OED urges the BLM to rely on the comprehensive findings in this report

¹² Appendix D, D-2.

as market forces and policy changes open up greater solar resource development in Utah. BLM's plans to offer the same development incentives to zones identified through state planning efforts as those offered to PEIS SEZs indicate that the agency has confidence in the findings of state reports.¹³

Current rental payment structures for right-of-way authorizations for solar energy projects¹⁴ are a factor in the economic feasibility of solar development on BLM land. The high annual base rent fees for BLM land in Utah have driven solar developers to state and private land, where fees are lower and development is more cost effective. Lowering the base rent fees for BLM land could increase the cost-effective generation potential for public lands in Utah, with the reduction in revenue from rental fees offset by MW capacity fee that would result from solar projects. The suggested economic incentives for development in SEZs provide an opportunity for the BLM to promote and facilitate increased solar generation in these areas. A longer phase-in period for rental payments, fixed MW capacity fee rental payments, and limited base acreage rental payments may alleviate the economic burden for project operators.¹⁵ Incentives that make solar generation on federal land competitive with development on state and private lands will increase total generation, improve transmission potential, and facilitate partnerships on projects across federal and non-federal lands.

The Protocol recommends establishing new state-based Reasonably Foreseeable Development Scenarios to incorporate changes to federal or state policies that affect projections.¹⁶ The OED strongly concurs with this recommendation and wishes to partner with the BLM in the development of these RFDs.

Finally, OED agrees with the BLM that technical and economic feasibility criteria need to take into account advances in solar energy technology, load areas served by solar generation, and transmission infrastructure. OED can provide expertise and resources critical to the development of these criteria, as well as provide up to date information on state policies and market opportunities that could alter assumptions on economic feasibility. The office recommends that the BLM consult with OED staff in the development of these criteria and forge an ongoing working relationship with OED to facilitate timely responses to policy and market changes that could present new solar generation opportunities in the state.

The Office of Energy Development appreciates the opportunity to comment on the Supplement to the Solar Energy Draft PEIS and looks forward to partnering with the BLM in the identification and development of additional SEZs in the State of Utah. Jeffrey Barrett, Renewable Energy Development Coordinator, is available to answer any questions you may have. You can contact him at 801-536-0210.

¹³ Supplement to the Draft Solar PEIS, Chapter 2, 2.2.2.2.6, pg. 2-30.

¹⁴ Instruction Memorandum No. 2010-141.

¹⁵ Supplement to the Draft Solar PEIS, Chapter 2, 2.2.2.2.3, pg. 2-26.

Page - 6 -

The state also notes:

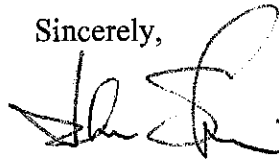

The bullet on page C-269, C-285, C-304 may be overstated by using the term "depleted", but the aquifer in the Escalante Valley has been overdrawn to the extent of causing land subsidence and earth fissures.

- *Groundwater use would deplete the aquifer to the extent that, at a minimum, wet-cooling options would not be feasible.*

Sections C.6.1.5.8, C.6.2.5.8, C.6.3.5.8 (Water Resources) on pages C-274, C-275, C-308, and Section C.7.2 (Water Resources Action Plan) on pages C-339 to C-343 include measures for assessing the impact on ground water.

Thank you for the opportunity to comment.

Sincerely,

A handwritten signature in black ink, appearing to read "John Harja". The signature is stylized with a large, sweeping flourish at the end.

John Harja
Director

January 26, 2012

Dear Administrator,

I am a yearly visitor to our public lands affected by these projects, and I can tell you the huge natural resource destruction that goes with these projects. The impacts to wildlife are enormous.

As a supporter of Defenders of Wildlife and someone who wishes to make solar energy development in the U.S. "smart from the start," I encourage you to strengthen protections for wildlife and natural resources in the Draft Solar PEIS.

First, I commend you for putting a stronger emphasis on solar energy zones--areas identified with few if any wildlife and natural resource conflicts. I encourage you to ensure that projects located in solar energy zones will be prioritized for development.

Although the Bureau of Land Management did the right thing by removing some highly sensitive areas from further consideration as zones (the Pisgah and Iron Mountain Zones in California), the agency has left open the possibility that solar development on some of these lands might still occur through the "variance process." This variance process has a potential for abuse by industry. Everyone in this country knows the power of industry to lobby, present their "own" science and eventually get their decision. Meanwhile, volunteers can only voice their comments. It is an unfair playing field for those who care deeply about our public lands.

With this in mind, variances should be extremely limited so that they are only used in rare instances where the conservation benefits are clear and can be documented. Variances should be the exception, not the rule. In the past I have seen the BLM give blanket categorical exclusions for projects that needed a great deal of evaluation through an EIS process.

To protect imperiled species like desert tortoises and bighorn sheep, the agency should exclude areas that have already been deemed unsuitable because of likely wildlife and resource conflicts.

America's degraded lands, like brownfields and old mining sites are not now included in most solar zones. They should be. Such areas are appropriate additional lands that should be available for development. Also considered should be areas along large transportation corridors such as I 15. The Ivanpah project is an example. The BLM did not handle the desert tortoise habitat with enough

evaluation, but it is in a transportation corridor with existing energy infrastructure that can be added to or paralleled without large disruption of wildlife habitat.

By developing degraded areas such as these -- rather than more sensitive and ecologically rich sites -- we can preserve important wildlife habitat and protect valuable natural resources.

America is transitioning from a society reliant on fossil fuels to one built on clean, renewable energy. But to make sure this is truly wildlife-friendly energy development, we must make sure the process is smart from the start by:

1. Supporting solar development in designated solar energy zones--areas where conflicts with wildlife and other important natural resources can be avoided or minimized;
2. Limiting variances for projects outside of zones. Make them the exception, not the rule; and
3. Requiring developers to avoid, minimize and effectively mitigate any unavoidable effects on wildlife by promoting "wildlife-friendly" solar development.

I believe the changes listed above will greatly enhance your proposal and better protect America's rich natural heritage. Thank you for considering my comments.

Thank You

Nancy Schultz

Draft Solar Energy Programmatic EIS
Argonne National Laboratory
9700 S. Cass Avenue – EVS/240
Argonne IL 60439

Re: Supplement to the Draft Programmatic Environmental Impact Statement for Solar Energy Development in Six Southwestern States; NMGF Project No. 14701

Dear Argonne National Laboratory:

In response to your letter dated October 2011, the New Mexico Department of Game and Fish (Department) has reviewed the above referenced document. The Department previously commented on the Draft PEIS in a letter dated March 14, 2011 (Project No. 13914). The Supplement contains new and modified components of the Bureau of Land Management's (BLM) proposed Solar Energy Program and the Department of Energy's (DOE) proposed programmatic environmental guidance. A protocol for identifying new Solar Energy Zones (SEZs) is identified, and incentives for projects within SEZs are outlined. In addition, some of the SEZs from the original Draft PEIS have been dropped from consideration, or the boundaries have been changed. The Department substantially concurs with the modified proposed alternatives for both agencies. The Draft PEIS and Supplement together offer a balanced approach that will facilitate renewable energy in the most suitable places, while protecting more valuable wildlife habitat from conversion to industrial land use. We offer the following comments on specific items in the Supplement.

Regional mitigation plans will be presented in the Final Solar PEIS. One of their purposes is to identify conservation priorities which could be funded by developers as mitigation for biological impacts. The Department requests the opportunity to participate in development of the regional mitigation plan applicable to New Mexico.

In the DOE proposed guidance, section 3.2.5, line 20, add language specifying coordination with "state wildlife agencies." A bullet point item should also be added to address the avoidance of construction activity during biologically sensitive time periods, such as breeding or migratory seasons.

The Department concurs with dropping the Mason Draw and Red Sands proposed SEZs, and with their retention as variance areas, where individual projects could be developed with

appropriate environmental analysis. In the Action Plan for the Afton SEZ, page C-248, under “Aquatic Biota,” note that intermittent and ephemeral surface waters are important for amphibians as well as for aquatic invertebrates, and amphibians should be included in any seasonal surveys of these features. Appendix D addresses procedures that will be used to designate new SEZs in the future. The Department appreciates the BLM’s commitment to consult with appropriate state agencies to evaluate potential landscape-level effects of development, and to conduct regular NEPA planning procedures leading to designation of new SEZs.

The October 2011 revision of Appendix J, Special Status Species, available separately from the Supplement on the project website, is greatly improved over the original Draft PEIS. We request Department designated sensitive species be included in the category of rare species, and listed under rarity status in the species accounts. This designation is an informal non-regulatory distinction based on the opinion of Department species biologists. The intent of this category is to alert land managers to the need for caution where these taxa may be affected. It is equivalent to other state wildlife agencies’ species of concern, which have been included in Appendix J. We have enclosed a list of New Mexico sensitive species for your consideration.

Thank you for the opportunity to comment on this National Environmental Policy Act document. If there are any questions, please contact Rachel Jankowitz, Mining Habitat Specialist, at 505-476-8159 or rjankowitz@state.nm.us.

Sincerely,

Matthew Wunder, Chief
Conservation Services Division

Solar Energy Draft PEIS
Argonne National Laboratory
9700 S. Cass Avenue - EVS/240
Argonne, IL 60439

5043984806 0050 

January 27, 2012

Mr. Bob Abbey
Director
Bureau of Land Management
Solar Energy PEIS
Argonne National Laboratory
9700 South Cass Avenue
Argonne, IL 60439

Dear Mr. Abbey:

Thank you for the opportunity to comment on the Supplement to the Draft Programmatic Environmental Impact Statement for Solar Energy Development (SDPEIS). Our organizations greatly appreciate the tremendous effort BLM has undertaken in the development of the draft PEIS and the subsequent Supplement, to create a solar development program. However, a critical aspect of a comprehensive solar development program is essentially absent, that of mitigation.

Mitigation, and specifically compensatory mitigation, provides an essential opportunity to protect the health of the nation's land, waters, and wildlife, while facilitating cost-effective, efficient and timely development of our nation's energy resources. To best meet the nation's conservation and energy development goals requires creating a mitigation program that is transparent, systematic, based on sound science, and addresses clear conservation priorities. Many (if not all) of the elements of a comprehensive mitigation program BLM is already using, developing or exist. The BLM/DOE Solar PEIS provides an opportunity to mesh these elements together under a consistent policy framework. The goal is clear policies establishing how compensatory mitigation is integrated into project NEPA documents and BLM decisions for all projects, leading to increased effectiveness and accountability of offsite mitigation while providing project developers, agency staff, and stakeholders with greater certainty regarding mitigation objectives and methods for implementing offsite mitigation. BLM appears to rely on the project proponent to design and develop mitigation proposals with little advance guidance, leading project developers to spend significant time and money developing a plan with very little idea of what will ultimately be required. And for a variety of reasons, project developers are not appropriate entities to design and implement compensatory mitigation.

The PEIS should define a mitigation *framework* that captures the mitigation hierarchy and drives siting and mitigation. The undersigned recommend that the mitigation hierarchy, i.e. avoid, minimize and offset, should be the guiding principle in establishing a mitigation framework and a subsequent compensatory mitigation program. These recommendations are principally focused on "offsets," i.e. compensatory offsite mitigation, however it is important that the entire mitigation hierarchy by addressed in the PEIS.

The primary and most important basis of a mitigation framework, and the basis for a compensatory mitigation program, is an understanding of the ecological attributes of the lands under consideration. We **recommend** the PEIS commit to using landscape-scale and finer scale ecological assessments that articulate the ecological health, status and/or condition of the species, habitats, migration corridors, and related values, e.g. recreation, across the landscape of potential development and any subsequent mitigation, i.e. the geographic scope of the PEIS. The PEIS should specifically commit, at a minimum, to incorporating and using existing and ongoing ecological analysis, especially those of its own creation and those of the affected States. Much of this information is currently available or under development by the BLM (and sister DOI agencies and contractors), States, and organizations like The Nature Conservancy and Natureserve. This includes BLM's Rapid Ecological Assessments (REAs), products created for the PEIS by Argonne and others, products produced by BLM's Assessment, Monitoring and Inventory (AIM) efforts, the California Desert Renewable Energy Conservation Plan (DRECP), BLM's Restoration Design Energy Project in Arizona, State Wildlife Plans, State Decision Support Systems (DSS), The Nature Conservancy's Mojave eco-regional assessment and West Mojave least conflict analysis.

A mitigation framework within the PEIS should seek to avoid ecological impacts to the greatest extent possible, especially to resources that cannot be mitigated or are declining – avoiding impacts by proper siting based on ecological analyses is the surest, easiest and best way to avoid subsequent mitigation demands. Significant impacts to habitat that supports special functions and values may simply not be replaceable through mitigation and therefore the best course may be to avoid those areas altogether. We recommend the PEIS identify specific lands where development should not occur. This list should be expanded to exclude development where there are ecological or other resources that are not mitigatable, declining, limited or rare, and should take into account the cumulative effects of development in determining these attributes.

After avoidance, a mitigation framework within the PEIS should seek to minimize ecological impacts through project design, and require Best Management Practices (BMPs) that specifically seek to minimize impacts during construction, operation, maintenance, and decommissioning, including implementing appropriate conservation measures related to timing and conduct of project activities. While the PEIS has extensive discussion of project siting, construction and operational BMPs, it provides little ecological and subsequent monitoring criteria to ensure that impacts are minimized to the greatest extent possible, especially to groundwater. The PEIS should establish clear ecological benchmarks that developers are to address in project development and operation.

The last facet of a mitigation framework is compensation for residual impacts (direct and indirect effects that are not avoided or minimized on-site) by providing replacement habitats, restoration of habitats, or other benefits, e.g. management actions that provide conservation benefits. The mitigation hierarchy recognizes that offsite mitigation is an inherently uncertain undertaking, which means that compensatory mitigation is sought only after efforts to avoid and minimize the impacts have been addressed. Inclusion of a compensatory mitigation program in the PEIS is the most efficient, cost-effective way to ensure the mitigation hierarchy is fully addressed within the mitigation framework.

A robust compensatory mitigation program consists of six elements:

1. An ecological baseline upon which unavoidable impacts are assessed.
2. A transparent mechanism or methodology to assess & quantify unavoidable impacts over the life of the impacts.
3. A consistent methodology to translate the impacts into dollars, i.e. mitigation investments.
4. A structure to hold, prioritize and apply mitigation investments. At a minimum the structure should include BLM, the USFWS, and State Fish and Game agencies – we recommend that key stakeholders be represented as well, including counties and conservation, sportsmen and recreation organizations.
5. A prioritization, e.g. conservation plan, as to where and how mitigation investments should be made to address impacts while seeking the highest return on investment.
6. Monitoring to ensure mitigation investments are adequate relative to impacts over the life of the impacts, with a feedback loop to ensure the mechanism to assess and quantify the impacts and the methodology to translate the impacts into mitigation investments adequately reflect sufficient mitigation.

We recommend the PEIS, at a minimum, include the establishment of a compensatory mitigation program that encompasses the six elements listed above, including at a minimum, attributes for each element that inform how they would be structured and implemented.

Mitigation is a conundrum BLM faces on a regular basis, it is by no means limited to solar energy development. To flesh out the elements of a compensatory mitigation program such that BLM could incorporate appropriate input into the DPEIS, we recommend BLM work with key stakeholders with experience in the science of developing and implementing mitigation and mitigation programs via a workshop or series of workshops. Specifically, the workshop(s) would address:

- a. Which methodology or mechanism would best suit BLM's needs to assess impacts?
- b. Which methodology or mechanism would best suit BLM's needs to translate impacts into dollars, i.e. mitigation investments?
- c. What should a conservation plan contain, and what process would best serve to manage and update it?
- d. What are the best examples of 3rd party fiduciary structures to manage and deliver mitigation investments?
- e. What are the array of "tools in the toolbox" to accomplish mitigation on the ground?

These are just some of the issues a workshop would or could seek to elucidate. The workshop need not focus specifically on the Solar PEIS, though could certainly capture specific, unique elements of solar development to ensure BLM is receiving needed input as it moves forward in developing regional mitigation plans and a compensatory mitigation program under the Solar PEIS.

Additionally, BLM should initiate two pilots for advance regional mitigation planning, one for the Riverside East SEZ and one for the Amargosa Valley SEZ. These pilots should focus on identifying areas that should not be developed within the SEZ (avoidance), BMPs specific to that SEZ (minimization), an evaluation of what restoration is likely to be effective within the SEZ, given the vegetation communities within the SEZ (restoration) and , finally, on developing each of the six elements to plan for compensatory mitigation. A Riverside East SEZ mitigation pilot will provide the opportunity to establish the type of assessment that is necessary in determining the level of impact acceptable for a sensitive and geographically limited ecological resource, e.g. microphyll woodlands. The Amargosa Valley SEZ is also an important area for a pilot project, in particular because it will serve as an example of how to analyze and address sand transport and sand source issues as well as a critical opportunity to establish SEZ-specific groundwater extraction BMPs, including monitoring, modeling and mitigation protocols.

Thank you for your consideration of our comments. We look forward to working with BLM on creating a mitigation framework and specifically regional mitigation plans that ensure protection of our countries critical natural resources while allowing the robust development of solar energy.

January 25, 2012

Bureau of Land Management
Attn.: Shannon Stewart
Solar Energy Draft PEIS
Argonne National Laboratory
9700 S. Cass Avenue—EVS/240
Argonne, IL 60439

Dear Ms. Stewart,

I am writing to provide comments on the Supplement to the Draft Solar Energy Programmatic Environmental Impact Statement.

As First District Supervisor for Santa Barbara County, I represent a community that has been at the forefront of environmental stewardship and alternative energy innovation. Through my experiences with members of the community and other government agencies, both locally and nationally, I understand firsthand the historic opportunity the Solar Programmatic Environmental Impact Statement (PEIS) will have on improving the way solar resources are developed on public lands.

To ensure that solar development on public lands is maximized, I recommend that the BLM ensure that large solar projects are built primarily in the pre-screened, low-conflict zones; that counties have a major role in designating future solar energy land use zones; and a 60 day comment period on the final plan be implemented to allow public response to additional information in the final plan.

Thank you for your consideration.

Sincerely,

Salud Carbajal
First District Supervisor

Dear Ms. Stewart,

I wish to comment on the Supplement to the Draft Solar Energy Programmatic Environmental Impact Statement being currently considered by your agency.

My county has a long relationship with public lands, and is very concerned about the way solar resources will be developed on these valuable resources. Because the long term plan for solar energy development will help shape future energy development and land use across the public lands of the west, I firmly believe the plan should provide additional incentives for building projects in low conflict zones and avoid development on public lands that are extremely important to wildlife, recreation, tourism, and other uses by county residents and visitors.

To be smart from the start, I support most of the plan as laid out in the revised Preferred Alternative, and recommend that:

- The BLM should ensure that these large solar projects are built primarily in the pre-screened, low conflict zones
- The BLM should ensure that counties have a major role in designating future solar energy zones
- The BLM should provide at least a 60 day comment period on the final plan to allow public response to any additional information in the final plan.

By doing these things, we can ensure that solar development avoids the conflicts and controversy that have plagued oil and gas development on public lands throughout the west. I personally urge you to do these things, which will allow solar development that is faster, cheaper, and better for the environment, consumers, and our western counties. Thanks, in advance, for your serious consideration on these matters.

Solar Energy Draft PEIS
Jane Summerson, Document Manager
Argonne National Laboratory
9700 S. Cass Avenue-EVS/240
Argonne, Illinois 60439

Subject: Supplement to the Draft Programmatic Environmental Impact Statement (PEIS) for Solar Energy Development in Six Southwestern States (DES 11-49)

Dear Ms. Summerson:

The California State Lands Commission (CSLC) staff has reviewed the Supplement to the Draft PEIS for Solar Energy Development in Six Southwestern States (Supplement or proposed Action). The U.S. Department of Energy (DOE) and the Bureau of Land Management (BLM) have prepared the Supplement as co-lead agencies under the National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 et seq.).

The CSLC has prepared these comments because of its jurisdiction over State school lands located within California as well as its trust responsibility for any and all projects that could directly or indirectly affect State-owned sovereign lands and/or school lands, and their resources or uses (pursuant to State California Environmental Quality Act [CEQA] Guidelines¹ §§ 15381, 15386, subd. (b)). The CSLC also supports environmentally responsible use of school lands for renewable energy projects (see *Resolution By The California State Lands Commission Supporting The Environmentally Responsible Development Of School Lands Under The Commission's Jurisdiction For Renewable Energy Related Projects*, which was adopted by the CSLC on October 16, 2008 (www.slc.ca.gov/Renewable_Energy/Documents/Resolution.pdf).

In addition, the CSLC in 2011 entered into a Memorandum of Understanding (MOU) with the California Department of Fish and Game, California Energy Commission, BLM, and U.S. Fish and Wildlife Service, Regarding Participation and Engagement in the California Renewable Energy Action Team and the Desert Renewable Energy Conservation Plan (DRECP).

¹ The "State CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

CSLC Jurisdiction

In 1853, the United States Congress granted to California millions of acres of land for the specific purpose of supporting public schools. In 1984, the State Legislature passed the School Land Bank Act (Act), which established the School Land Bank Fund and appointed the CSLC as its trustee (Pub. Resources Code § 8700 et seq.). The Act directed the CSLC to develop school lands into a permanent and productive resource base for revenue generating purposes. The CSLC manages approximately 469,000 acres of school lands held in fee ownership by the State and the reserved mineral interests on an additional 790,000± acres where the surface estates have been sold. Revenue from school lands is deposited in the State Treasury for the benefit of the Teachers' Retirement Fund (Pub. Resources Code § 6217.5).

After preliminary review of the information and maps provided in the Supplement, CSLC staff finds that the areas proposed for solar energy development may contain or affect lands in which the State of California has ownership or an interest and which are under the jurisdiction of the CSLC. This ownership and interest ranges from fee ownership, which would require a lease for any project located on sovereign land, to reserved mineral interests.

Due to the program-level review of the proposed Action, CSLC staff is currently unable to determine the extent of sovereign ownership or jurisdictional interest of the CSLC in the areas proposed for Solar Energy Development. We request that as solar energy development plans proceed, the DOE and the BLM coordinate with CLSC staff to determine if any components of the proposed Action will require a lease or permit. We additionally request to be placed on any future distribution mailing list for the PEIS.

This conclusion is without prejudice to any future assertion of State ownership or public rights, should circumstances change, or should additional information become available. This letter is not intended, nor should it be construed as, a waiver or limitation of any right, title, or interest of the State of California in any lands under its jurisdiction.

Solar Energy Development Location and Description

Draft Solar PEIS. On December, 17, 2010, the BLM and DOE published a draft PEIS for Solar Energy Development in Six Southwestern States (Arizona, California, Colorado, Nevada, New Mexico and Utah). As described in the draft PEIS, the BLM identified a need to respond in a more efficient and effective manner to the high interest in siting utility-scale solar energy development on public lands and to ensure consistent application of measures to mitigate adverse impacts of such development. Certain elements of existing solar energy policies would be replaced with a comprehensive Solar Energy Program that would allow the permitting of future solar energy projects to proceed in a more efficient and standardized manner.

Supplement to the Draft Solar PEIS. On October 27, 2011, the BLM and DOE released the Supplement. The Supplement sets forth a more complete description of the process for identifying solar energy zones (SEZs), including an analysis of transmission availability and potential resource conflicts in order to ensure that proposed SEZs are

located in appropriate areas. The Supplement also describes in more detail the incentives for developers to site new projects in SEZs (including greater certainty and shorter permitting times) and it identifies on-going regional planning processes that are being used to identify additional SEZs. In California, two of these processes include the DRECP and West Chocolate Mountains Renewable Energy Evaluation Area (REEA).

Environmental Review

1. Subsequent Review under CEQA

Any future solar development activities proposed to be located on State-owned school lands would require additional environmental analysis and compliance with the provisions of CEQA (see attached CSLC letter dated July 2, 2008). The Supplement should state that project specific activities in California requiring discretionary action by state agencies (such as the CSLC) will likely require supplemental environmental review under CEQA.

2. Cultural Resources

The Supplement should mention that the title to all archaeological sites, and historic or cultural resources on or in the sovereign lands of California is vested in the State and under the jurisdiction of the CSLC. Mitigation measures developed to address any cultural resources that may be affected by the proposed Action and any unanticipated discoveries during future solar development construction activities should include consultation with CSLC staff.

CSLC staff appreciates the opportunity to review and comment on the Supplement and looks forward to further communication from the DOE and BLM. Please send copies of future PEIS-related documents or refer questions concerning environmental review to Jennifer Deleon, CSLC Alternative Energy Program Manager, at (916) 574-0748 or via e-mail at jennifer.deleon@slc.ca.gov. For information concerning the management, leasing, and sale of State school lands, please contact Jim Porter, Public Land Management Specialist, at (916) 574-1865 or via email at jim.porter@slc.ca.gov.

Sincerely,

Cy R. Oggins, Chief
Division of Environmental Planning
and Management

Subject: Notice of Intent for the Programmatic EIS to Evaluate Solar Energy Development (SCH #2008064004)

Dear Ms. Resseguie:

The California State Lands Commission (Commission) staff appreciates this opportunity to provide comments on the Notice of Intent for the Programmatic Environmental Impact Statement (PEIS) to Evaluate Solar Energy Development (SCH #2008064004). The State of California and the Commission are supportive of development of alternative energy projects in California, as renewable energy resources are essential for reducing greenhouse gas emissions and reaching AB 32 (Nunez, 2006) goals; and for reaching SB 1078 (Sher, 2002) goals, which requires the State to increase the portion of electricity derived from renewable resources to 20 percent by 2017. Therefore, we are hopeful that the content and analyses presented in the PEIS will help to guide the siting, planning, alternative analyses, and permitting processes for individual projects, and thereby, decrease the amount of time needed for additional environmental review at the project-specific level.

As general background, the State of California acquired sovereign ownership of all tidelands, submerged lands, and the beds of navigable waters upon its admission to the United States in 1850. The State holds these lands for the benefit of all the people of California for statewide Public Trust purposes (waterborne commerce, navigation, fisheries, water-related recreation, habitat preservation, and open space). The State's sovereign land interests are under the jurisdiction of the Commission. In addition, school lands were granted to the State of California under the School Land Grant of 1853. The Commission, through its State School Lands Management Program, manages approximately 469,000 acres of school lands held in fee ownership by the State and the reserved mineral interests on an additional 790,000± acres where the surfaces estates previously have been sold. In 1984, the State Legislature approved the School Land Bank Act (Act) that created the School Land Bank Fund (SLBF) and appointed the Commission as trustee of the SLBF.

Through the establishment of the Act, the Legislature directed the Commission to manage the remaining school lands to provide an economic base for support of the public school system. The Commission is responsible for developing school lands into a permanent and productive resource base for revenue generating purposes.

The use of any sovereign or school lands for development of solar energy requires that the applicant first obtain a lease from the Commission. Based on the information and maps provided during your scoping meeting on June 25, 2008, it is likely that school lands parcels lie within proposed solar project areas. Before the Commission can issue any lease, permit, or other entitlement for use of State lands, review for compliance with the California Environmental Quality Act (CEQA) must be completed. The terms of CEQA may be found in the California Public Resources Code (PRC), Section 21000 et seq., and in the State CEQA Guidelines, California Code of Regulation (CCR), Title 14, Section 15000 et seq. For the majority of projects that involve lands under the jurisdiction of the Commission, the Commission is the CEQA Lead Agency; and other occasions, the Commission may act as a Responsible and/or Trustee Agency under CEQA. Because of our CEQA responsibility, we are currently in the process of developing a Memorandum of Understanding and Confidentiality Agreement between the U.S. Department of The Interior, Bureau of Land Management (BLM) California Desert District, and the Commission concerning jointly prepared environmental documents for currently proposed projects.

While we recognize that the PEIS will programmatically address solar development across six western states (California, Arizona, Utah, Colorado, Nevada, and New Mexico), we also believe that with a few adjustments to the PEIS document you could also expedite projects that involve adjoining California's school lands, i.e., those that will be subject to CEQA. NEPA requires that an EIS be integrated with related environmental review and consultations to the fullest extent. State agencies are encouraged to use NEPA documents to replace CEQA documents if the NEPA document complies with CEQA (CCR section 15221), but we cannot rely solely on the NEPA document where it fails to meet the requirements of CEQA. The general areas of enhancement of the PEIS to allow the Commission to tier directly off the document for future project-specific analyses include:

- a clear statement within the PEIS that indicates the State's intent to use the document as a CEQA equivalent and/or to use it as the basis for preparing future environmental documents as required by CEQA;
- a discussion of state-listed threatened, endangered, sensitive, and fully-protected species, including those that qualify for analysis pursuant to CCR section 15380;
- a discussion of the threshold of significance and the criteria used to judge whether an impact is above or below that threshold (CCR section 15064(f));
- a discussion of the significant environmental effects that cannot be avoided if the proposed project is implemented (CEQA Guidelines section 15126.2(b)) and significant irreversible environmental

changes which would be caused by the proposed project should it be implemented (CEQA Guidelines section 15126.2(c));

- a discussion of the effects not found to be significant (CEQA Guidelines section 15128);
- a discussion of feasible mitigation measures for each significant impact pursuant to CCR section 15126.4(a);
- a discussion of cumulative impacts (CEQA Guidelines section 15130);
- an analysis of growth-inducing impacts as a separate section in the PEIS pursuant to CCR section 15126.2(d);
- a greenhouse gas analysis per State of California Assembly Bill 32 (Nunez, 2006);
- a discussion that identifies, in general, those state parcels subject to the solar development as identified in the PEIS; and
- an increased public notice and circulation program as required by CEQA (CCR section 15225).

It will also be important for the purposes of tiering off the PEIR, that the cumulative analysis address reasonably foreseeable projects outside of BLM's jurisdiction. The Commission's staff will continue to work with you during the scoping and review of the PEIS, as staff time allows. We are unable, with our current project workload and with current staffing levels to participate as a cooperating agency, as described by NEPA, at this time. If you have any questions regarding leasing or jurisdictional issues, please contact Mr. Jim Porter at (916) 574-1865 or via email at porterj@slc.ca.gov. If you have questions regarding environmental review or analysis, please contact me at (916) 574-1880 or via email at newtong@slc.ca.gov.

Sincerely,

Gail Newton, Chief
Division of Environmental Planning
and Management

Solar Energy Draft PEIS
Argonne National Laboratory
9700 South Cass Avenue
EVS/240
Argonne, IL 60439

Dear Sir or Madam:

I represent the third Supervisor District in San Bernardino County, California, which spans from the mountain community of Big Bear City to the arid Hi-Desert of California, including the communities of Yucca Valley, Joshua Tree and Twentynine Palms.

I would like to thank Argonne National Laboratories, the Department of Energy and the Bureau of Land Management for this opportunity to comment on the Solar PEIS Supplement, a plan for solar development on public lands in six western states, including California. While I support the effort to invest in a renewable energy future to create jobs and to ensure energy independence, I believe that it must be done in a manner that does not jeopardize our local and regional tourist economy or our national parks, wilderness and other ecologically sensitive lands.

The original Solar PEIS study, whose comment period closed last year, received over 80,000 comments from stakeholders and agencies. These comments improved the new Solar PEIS Supplement, particularly in terms of protecting the resources of Joshua Tree National Park, which is inextricably linked to our local and regional economy, while also providing adequate land for renewable energy development. In the supplement, there were improvements in the configuration of some of the proposed solar energy zones (SEZs), areas designated through extensive research and a comprehensive stakeholder process that had a low potential for resource conflict. For example, the Iron Mountain SEZ was eliminated because of its sensitive ecological resources, lack of transmission lines and proximity to Joshua Tree National Park. The Riverside East Solar Energy Zone was reduced in size by 43,439 acres and pushed away from Joshua Tree National Park's eastern boundary. I support the process of guiding solar development and further refinement through the designation of these and possible future SEZ's.

However, the preferred alternative in the new Solar PEIS Supplement not only guides solar development into the low conflict SEZs that have been identified through extensive research and stakeholder input, but also establishes a "variance process" that will allow development of projects outside of solar energy zones on a case by case basis on over 20 million additional acres of public land. Tens of thousands of acres of this land in the California desert were acquired by local conservation groups and donated to the federal government, representing a significant investment by local stakeholders in the conservation of these lands. These lands are very

important to desert recreationists, especially given the losses to recreation in the desert. The variance process is incongruous with the designation, process and purpose of the SEZs themselves and undermines other important resource values and our local and regional economy. I am writing to ask you to make protecting our national parks and the economy of our gateway communities a priority by not allowing solar development through a variance process.

Additionally, I would like to request that any project proposed within 15 miles of a National Park Unit or deemed to be harmful to national park resources should be required to consult the National Park Service and US Fish and Wildlife Service. Finally, if the preferred alternative with the variance lands is adopted, lands in immediate proximity (5 miles) to national parks should be removed from consideration for solar development.

In the Morongo Basin, there are large areas of variance lands east of the City of Twentynine Palms and east of the Twenty-nine Palms Air/Ground Combat Center, would interrupt critical wildlife corridors as identified by the SC Wildlands report, "A Linkage Design for the Joshua Tree/Twentynine Palms Connection." Solar development of these lands could ultimately end up undermining tourism by unnecessarily denigrating the natural resource values of Joshua Tree National Park.

There's no doubt that these resources are tied closely to the tourist economy in the Hi-Desert Region of California. For example, in 2010, the 1.4 million visits to Joshua Tree National Park contributed almost 60 million dollars into local gateway communities. Solar development on variance lands might interfere with a key reason visitors come to our area, namely scenic vistas and wildlife. In fact, a 2010 University of Idaho Joshua Tree National Park Visitor Use Survey showed that visitors groups to Joshua Tree National Park's said that views without development and wildlife, 90% and 81% respectively, were extremely important values. Development of variance lands around Joshua Tree National Park and around all three California desert national parks could end up harming our local and regional tourism economy.

Thank you for your time and consideration.

Sincerely,

A handwritten signature in black ink, appearing to read "ND", written in a cursive style.

Memorandum

To: Director, Bureau of Land Management

From: Director *Daniel M. Ashe*

Subject: U.S. Fish and Wildlife Service Comments on the Bureau of Land Management/Department of Energy Supplemental Programmatic Environmental Impact Statement for Solar Energy Development

As a cooperating agency, the U.S. Fish and Wildlife Service (Service) thanks the Bureau of Land Management (BLM) and Department of Energy (DOE) for this opportunity to submit written comments on the Supplement to the Draft Programmatic Environmental Impact Statement (PEIS) for Solar Energy Development in Six Southwestern States. The Service appreciates the steps you took to incorporate most of the Service's previous comments. The Service will support the BLM preferred alternative (Modified Solar Energy Development Program Alternative) if concerns regarding desert tortoise connectivity and the variance process can be addressed. Otherwise, we would support the Modified Solar Energy Zone (SEZ) Program Alternative. We request that BLM and DOE work with the Service to revise the desert tortoise exclusion areas and variance process.

The Service coordinated closely with the BLM on the development of the Draft PEIS and on the Supplemental PEIS. Several issues remain that the Service believes require additional focus or clarity. Service staff will work with BLM staff on specific language and will provide additional mapping data. A summary of our major comments follows:

- The Service recommends that BLM designate additional "exclusion areas" to protect desert tortoise population connectivity. We provide detailed comments, attached, that describe and depict areas that we believe should be added to the list of excluded areas and the scientific rationale behind our recommendations. These areas are important for maintaining connectivity between desert tortoise conservation areas. Protection of desert tortoise connectivity areas is needed to promote tortoise recovery and avoid isolating tortoise populations. The attached map depicts priority connectivity corridors for desert tortoise. We recommend BLM further consider a system of exclusion areas and definitive criteria that protects desert tortoise population connectivity.
- As written, the variance process does not provide clear incentives for development within SEZs, or disincentives for developing outside of SEZs, particularly in high resource

conflict areas. The Service would welcome an opportunity to work with BLM on these criteria.

Please contact Mr. Larry Bright, Chief, Branch of Conservation Planning Assistance at 703-358-2440 if you have any questions regarding these comments.

**Standard Review Form for
Supplemental Solar Energy Development PEIS (Issued October 2011)**

Reviewer's Name: Compiled by Rachel London

Reviewer's Organization: USFWS

Reviewer's email address: Rachel_London@fws.gov

Reviewer's Telephone numbers: 703-358-2491

Primary Disciplinary Area (e.g., ecology, land use planning, regulatory oversight): Conservation Planning Assistance, Migratory Birds, Endangered Species

Section(s) or Chapter(s) Reviewed: All

EIS Section	Page/Line	Comment/Suggested Revision	Action (for use by ANL)
General		<p>The Service recommends that the FEIS more accurately describe desert tortoise translocation as experimental. As such it should only be used as a last resort when avoidance cannot be achieved. The FEIS should describe translocation in this fashion and clearly state the objective of using avoidance as the first choice of mitigation. Translocation should be planned in accordance with the FWS Desert Tortoise Translocation Guidance and coordinated with FWS and permitting agencies.</p> <p>The following should be inserted in Section 2.2.2.3.1, pg. 2-35, end of line 25 (i.e., after the list of desert tortoise conservation areas and before the request for comments on the two variance options for desert tortoise), and similar language should be used throughout the FEIS wherever desert tortoise translocation is discussed:</p> <p>“Regardless of the variance process ultimately selected for addressing desert tortoises and their habitats, using translocation as a measure to minimize adverse effects to the species should only be considered after other options, particularly avoidance or siting projects in areas supporting low density populations, have been eliminated. The long-term effects of translocating desert tortoises remain relatively unknown; therefore, implementation of this activity should be approached in an experimental manner. The USFWS’s Desert Tortoise Recovery Office is currently working to develop a framework that guides translocation research and establishes effectiveness monitoring metrics to support an analysis of the value of</p>	

		<p>translocation as a minimization measure. To address the impacts to desert tortoises from previously permitted and ongoing project reviews, the USFWS developed translocation guidance that continues to be refined as new data become available. This guidance and subsequent effectiveness monitoring is directed at addressing the following significant biological risks of desert tortoise translocation:</p> <ol style="list-style-type: none"> 1) Spread of disease through the translocation of infected animals to uninfected populations. 2) Increased spread of disease through the translocation of uninfected animals into infected populations. Changing existing disease dynamics 3) Surpassing carrying capacity of the translocation (recipient) area. Variation in desert tortoise habitat quality likely contributes to habitat-specific demographic rates (i.e., higher recruitment in habitats with nutritious forage) and occupancy. However, specific, measurable characteristics of habitat that contribute to high rates of desert tortoise survival, reproduction, and recruitment are not currently known (USFWS 2008). 4) Continued population declines even within designated conservation areas and designated critical habitats. If translocation of desert tortoises is implemented, the recipient sites should receive increased management focus to facilitate the effectiveness of translocation as a minimization measure.” 	
General		<p>We recommend that conservation of the burrowing owl be addressed, even on agricultural lands. We are starting to see significant impacts to this species, especially relative to passive translocation and the ineffectiveness of this practice. Ensuring that adjacent lands with suitable existing burrows or burrowing habitats are conserved and requiring active translocation practices with adequate monitoring requirements as mitigation would increase survivorship of displaced individuals.</p>	
General		<p>The Service recognizes the need for additional information on the long-term health and conservation of bald and golden eagles in the project area. We welcome the opportunity to collaborate with BLM on studies addressing a number of issues, including the potential cumulative effects of solar energy development on eagle foraging habitat, and the potential effects of specific technologies, such as power tower technology, on eagles in the American Southwest.</p>	
General		<p>The Service continues to recommend that Mojave desert tortoise habitat linkages connecting Tortoise Conservation Areas (as identified in the 2011 revised recovery plan for the species) be excluded from utility-scale solar energy development under the Solar PEIS. We are concerned that solar energy development within these linkages may compromise recovery of the Mojave desert tortoise by isolating populations within tortoise conservation areas and within the linkages</p>	

		<p>themselves. The Service has worked to further refine the areas we are recommending for exclusion to focus on those that are most crucial to maintaining genetic flow between existing conservation areas. We have made these refinements under the assumption that the variance process described in the FEIS will include specific evaluation criteria, as opposed to “considerations.” We believe treating the considerations as criteria is less ambiguous, and we suggest a return to that approach. Criteria should include identifiable thresholds, especially in desert tortoise habitat, so developers and BLM decision makers can make consistent application decisions.</p> <p>Specifically, the Service recommends establishing the following as criteria within variance areas. The Service has identified three categories, labeled on the attached map as Priority 1 areas (red polygons), Priority 2 areas (orange polygons), and variance areas (mint polygons). In the case that the BLM decides not to exclude desert tortoise connectivity areas, the Service recommends that the BLM set clear thresholds as criteria for development within these areas of zero sign (e.g., burrows, scat, tracks) or individuals (>160 mm Midline Carapace Length) per square mile within Priority 1 areas, and no more than 2 sign or individuals per square mile within Priority 2 areas. Regardless of whether or not desert tortoise connectivity areas are excluded, the Service recommends a threshold of no more than 5 sign or individuals per square mile within variance areas.</p> <p>Should BLM decide not to exclude desert tortoise connectivity areas, the Service recommends that a component of the BLM’s adaptive management and monitoring plan, to be coordinated with potentially affected natural resource management agencies, be a commitment to periodic analyses of the impacts of development to connectivity areas. It is important that should development occur within these areas, corridors remain protected for desert tortoise connectivity. This may entail an analysis of the cumulative effects of projects within a given area on desert tortoise connectivity, and the flexibility for BLM to choose to exclude certain areas from further development in order to maintain corridors.</p>	
1.7.2	1-10/Whole Section	<p>We are concerned that applications filed prior to the publication of the final supplement will be processed using the current criteria. The current criteria (i.e., due diligence IM) uses ‘adverse modification of critical habitat’ as the only wildlife consideration. Many of these projects are proposed in ‘variance areas’ which contain significant resources and would not be developed if screened using the criteria identified in Option 2 of the supplement. Many of these applications have not submitted PODs or initiated NEPA; with regard to the application of variance criteria,</p>	

		we recommend BLM establish a project threshold, such as ‘Project has not initiated NEPA,’ rather than using the project application date and the publication date of the Supplement.	
1.8.2	1-14/Whole Section	We recommend that this section be edited to clarify how the BLM will implement the competitive process within the SEZs, and how existing ROW applications will fit into this process.	
2.2.1.1	2-4/40-44	We would not recommend that the confirmation of a Power Purchase Agreement (PPA) be used as a qualification for due diligence. While a PPA does not technically affect an agency’s decision making process, it can create a difficult regulatory environment. Applicants would have reduced flexibility to alter project design once they are bound to a PPA, and applicants stand to lose substantial amounts of money if projects are not approved.	
2.2.1.1	2-5/15	This line references wind energy projects, which are not relevant to the solar PEIS.	
2.2.1.1	2-7/19-37	This paragraph references the factors the BLM would consider in identification of an appropriate reclamation bond. We recommend that the bond consider funds for maintenance of translocated desert tortoise populations. If a project folds after translocation has occurred, the BLM and FWS should not be responsible for bearing the cost of maintaining these altered populations.	
2.2.1.3	2-14/16-25	It is unclear how “design features” differ from the “variance considerations” applied to lands outside of the SEZs and exclusion areas. Please clarify.	
2.2.2.1	2-16/Table 2.2-1	<p>We propose four polygons of occupied Utah prairie dog (<i>Cynomys parvidens</i>) habitat be excluded from the Modified Program Alternative (variance areas). Utah prairie dogs are listed as threatened under the Endangered Species Act. The four polygons each contain multiple Utah prairie dog colonies and include some of the most important areas in the West Desert Recovery Area.</p> <p>Each of the polygons is identified below by township, range, and section, and a map is included as an attachment to this correspondence. We can provide the GIS file upon request.</p> <ol style="list-style-type: none"> 1. Lund – Sec. 26 and 27 T32S R15W; W ½ Sec.34 T32S R15W; W ½ Sec.35 T32S R15W. 2. Adams Well – Sec. 13 and 14 T33S R12W; SW ¼ Sec.15 T33S R12W; E ½ Sec.22 T33S R12W; Sec.23 T33S R12W; W ½ NE ¼ Sec.24 T33S R12W; W ½ SE ¼ Sec.25 T33S R12W; Sec.26 T33S R12W; E ½ Sec.27 T33S R12W; E ½ Sec. 35 T33S R12W. 3. West of Rush Lake – S ½ Sec.8 T34S R11W; N ½ Sec.17 T34S R11W. 4. Buckhorn Flat – S ½ Sec.30 T31S R7W; N ½ Sec.31 T31S R7W; E ½ SE ¼ Sec.31 T31S R7W. 	

2.2.2.1	2-16/Table 2.2-1	The BLM Richfield Field Office has identified “key areas” for the endangered Wright fishhook cactus (<i>Sclerocactus wrightiae</i>) and the threatened Winkler cactus (<i>Pediocactus winkleri</i>). Key areas are defined as areas of habitat that contain groupings of occupied cactus sites within distinct geographic areas and management units. We recommend eleven such “key areas” be excluded from the Modified Program Alternative (variance areas).	
2.2.2.1	2-16/Table 2.2-1	We recommend the following addition to Number 8: Utah prairie dog habitat as identified by the BLM. Please see the attached map and description above for the location of the four Utah prairie dog polygons we recommend for exclusion under the Modified Program Alternative.	
2.2.2.1	2-16/Table 2.2-1; Number 8	We recommend that the Solar PEIS include an inclusive list of the sensitive species habitats where the BLM has made commitments, including areas identified by the FWS for exclusion to protect desert tortoise linkages along with a map of these linkage exclusions. As it is written, it does not appear that the BLM is proposing to exclude any areas for the desert tortoise outside of DWMA and critical habitat.	
2.2.2.1	2-16/Table 2.2-1	We recommend designating special recreation management areas in Nevada as exclusion areas. Allowing solar development in areas designed to direct OHV use is likely to displace those users. For example, approximately 8,417 vehicles containing 21,042 visitors recreated at the 11,600-ac Big Dune SRMA in 2010, an open sand dune area with few wildlife conflicts. If displaced, these users might disperse and be more difficult to monitor. They might create new routes (habitat disturbance) in unanticipated user-selected areas including areas important for desert tortoise, burrowing owls, and other special status species.	
2.2.2.1	2-16/Table 2.2-1; Number 12	Please clarify whether the intent is to exclude all translocation areas identified under Land Use Plan (LUP) amendments used to develop solar projects up to this point. In a few cases, reinitiation of consultation has required a modification of the translocation area that was not accounted for through a supplemental EIS or plan amendment. These translocation area modifications should be excluded even though the necessary LUP amendment and supplemental EIS was not completed.	
2.2.2.2.3	2-23/Whole Section	This section identifies incentives for project development in SEZs. We recommend that a similar section to articulate disincentives to developers focusing on variance areas is included in the final PEIS.	
2.2.2.2.3	2-24/19-34	This section on facilitation of mitigation seems to indicate that data will be collected and mitigation/minimization strategies for the various SEZs would be developed based on these data. We request that the BLM provide additional information on mitigation strategies to ensure that the FWS considers this information as a minimization measure in the jeopardy analysis. We	

		recommend the BLM clarify when the regional mitigation plans will be developed and identify how these plans relate to the SEZ action plans. In addition, given that the BLM recognizes significant data gaps exist for SEZs, we recommend that the BLM articulate what action they would take if significant, unanticipated resources are discovered within a SEZ when it is surveyed. Will any such areas continue to be considered for development despite the newly discovered resources? Or will BLM have a process by which those resources can be taken into consideration?	
2.2.2.2.3	2-24/45-46, 2-25/1-7	The long-term protection of existing lands under BLM jurisdiction that have been identified for mitigation to offset project impacts, either through improved management practices or habitat restoration of currently degraded conditions or acquisition of private lands that are conveyed to BLM, continues to be a concern. Given the relative scarcity of private lands available for conservation acquisition in select desert tortoise recovery units, this apparent constraint also poses an obstacle to BLM's ability to effectively mitigate the large-scale impacts of the proposed action. We recommend the final PEIS include an analysis of this issue, with accompanying remedies, to provide more effective mechanisms to manage public lands for conservation purposes, and satisfy BLM's responsibilities under section 7(a)(1) of the ESA of 1973, as amended.	
2.2.2.2.5	2-29/First Box in Diagram, D- 1/Whole Section	We recommend the BLM conduct an analysis to determine if public lands are needed to meet any identified demand for a new SEZ. We recognize that the BLM has not previously been able to look at private lands in their alternatives analysis under NEPA. However, we suggest that part of the screening process for looking at the need for a SEZ include an assessment to determine if the need can be met on private lands.	
2.2.2.2.5	2-31/27-43, 2-32/1-14	While the BLM indicates that they intend to use the DRECP as the foundation for possible amendments to the CDCA Plan and associated RMPs, we are concerned that there will likely be conflicts due to the discrepancy in the timing of the two documents. The PEIS is likely to be finalized before the DRECP. Some lands identified for development in California under the PEIS are currently identified preliminarily for conservation under the DRECP. We are concerned that development allowed under the PEIS could preclude conservation options under the DRECP. To provide assurances that this does not occur, we recommend that the BLM ensure the final PEIS is compatible with the preliminary DRECP to the maximum extent possible and/or includes language that defers to the DRECP process as it evolves. The FWS looks forward to continuing to work with the BLM on both the solar PEIS and the DRECP to identify discrepancies and to maintain consistency.	
2.2.2.3	2-33/Whole	Overall, the variance process appears to require an additional level of due diligence on the part of	

	Section	the project applicant, including documentation of how the design features, best management practices, and/or mitigation requirements in Appendix A would be implemented. We are concerned, about the qualitative nature of the variance considerations. With the exception of the species-specific considerations for desert tortoise and greater sage grouse, please clarify how these somewhat subjective considerations will be interpreted and applied in the absence of more objective criteria.	
2.2.2.3.1	2-33/Whole Section	There is no discussion of disincentives for development in the variance areas in this section. Our understanding was that the BLM would discourage development in these areas. Please clarify how the BLM will develop and implement disincentives in the final Solar PEIS.	
2.2.2.3.1	2-34/9-10	It will be difficult for the FWS to provide detailed comments on the suitability of a proposed variance site for development or to evaluate variance considerations without the appropriate data in hand. We recommend the BLM include a third meeting to allow for additional project evaluation and to review the data identified in the second meeting. This would allow the FWS to provide meaningful input on whether a proposed project should go forward to NEPA scoping.	
2.2.2.3.1	2-35/28-31	The FWS does not support Option 1. If the desert tortoise linkage areas we recommend for exclusion are not adopted, we recommend criteria, such as outlined under Option 2, be applied to projects proposed within desert tortoise habitat.	
2.2.2.3.1	2-35/20-22, 2-36/Figure 2.2-2	The desert tortoise linkage areas recommended by the FWS as exclusion areas in the Upper McCoy Valley within the Riverside East SEZ are identified on this figure as development areas. The parenthetical states that "...small areas of overlap will be resolved for the final Solar PEIS." We recommend that BLM coordinate with the FWS to target areas for further refinement in this zone.	
2.2.2.3.1	2-35/43-45	Please clarify by what mechanism and for what length of time these corridors will be protected from habitat disturbance. We recommend establishing mechanisms to delineate and protect these areas for long-term (decades) genetic connectivity and recovery of the desert tortoise and identifying these protections in LUPs.	
2.2.2.3.1	2-37/20-26	The document states the solar development applicant must provide documentation that the project is at least 3 miles from the nearest Greater sage-grouse lek. Lek persistence is positively influenced by the proportion of sagebrush habitat within 6.4 km (4 miles) of the lek (Walker et al. 2007). We recommend that a solar energy project should be at least 3 miles from the nearest lek. If the project will be within 4 miles of a lek, additional conservation measures should be followed to minimize impacts to grouse, such as: limiting human activity as much as possible; design the project footprint and associated infrastructure (including roads) to preserve as much sagebrush habitat as possible; ensure that fencing is limited or allows for grouse passage; and the	

		number of tall structures be limited to those necessary for facility operations.	
2.2.2.3.1	2-39/4-9	While it may be implied, to be clear to applicants, bullets “threatened and endangered species” and “migratory birds” should be added. The term “trust resources” is not a term familiar to the public.	
2.2.2.3.1	2-39/ line 9	It is unclear why three species are specifically identified on this list, with all others captured under “Other trust resource concerns.” We recommend at minimum the addition of Utah prairie dogs, Wright fishhook cactus (<i>Sclerocactus wrightiae</i>), San Rafael Cactus (<i>Pediocactus despainii</i>) and Winkler cactus (<i>Pediocactus winkleri</i>). Also recommend adding “bald and...” to golden eagles, on line 8.	
2.2.3.2	2-41/25-33	The action plans identify data gaps, propose data sources and data collection methods, and prioritize collection and analysis of data for those SEZs that are most likely to be developed in the near future. Appendix C identifies numerous data needs. We recommend that the BLM facilitate the collection of data at the SEZ-level rather than the project-specific level and in a manner such that the data will be available for adaptively managing development within the SEZs.	
2.3, 2.3.5	2-50/21-27, 2-80/Whole Section	This section incorporates by reference chapters/appendices from the DPEIS; however, it is unclear whether revisions will be made to the cumulative impacts analysis. We recommend that our previous comments pertaining to the analysis be reviewed and incorporated into the final PEIS. Appendix J does not appear to have been updated.	
2.3	2-51/Table 2.3-2	We recommend that the BLM clarify how the percentage of species-specific habitat/ecosystems estimated to overlap with proposed development lands was calculated. The table suggests that the number of acres available for development is analogous with suitable habitat for the various species under consideration. Although we are not clear on how the percentages were generated, we are concerned that the percentage for the desert tortoise could be misleading. Because variance areas include desert tortoise connectivity areas, the seemingly low percentage belies the importance of the lands being considered (in other words, it includes lands which are very important to desert tortoise recovery).	

2.3.1.2	2-65/10-12	It is not clear how projects on variance areas would be compared to each other unless there is a process through which a group of applications can be compared to each other.	
B.1.1.1	B-3/15-18	It would be helpful to define the “affected area” for SEZs in the Supplement. In the DPEIS it is a 50 mi radius from the center of the SEZ (see e.g. DPEIS p. 8.2-136, ln 34) but that is not carried into the Supplement. In the Supplement the context of “less than 1% of the potentially suitable habitat” is thus not defined.	
Appendix C	Throughout, e.g., C-276/36	We recommend that the action plans in Appendix C be edited to more clearly identify actions as “commitments” such that pre-disturbance inventories are required. For example, the document currently states: “The following additional data-gathering actions would be useful...” and “...habitats for special status species should be mapped.”	
C.1.1.5.9, C.1.2.5.9	C-11/Table C.1.1-1, C-27/Table C.1.2-1	Again, it would be helpful to define the “affected area” for SEZs in the Supplement. In the DPEIS it is a 50 mi radius from the center of the SEZ (see e.g. DPEIS pages 8.2-136, line 34) but that is not carried into the Supplement. In the table, the footnotes could be modified to include this information.	
C.1.2.5.9	C-28/Table C.1.2-1	Under Yuma clapper rail, 50,000 acres of potentially suitable habitat in a 50 mi radius is several orders of magnitude too high and should be checked. There are wet sloughs in the Gila River floodplain but most of the floodplain cross section is normally dry. If the region is something other than the defined affected area that should be clarified.	
C.2.1.1	C-38/Figure C.2.1-1, C-39/20-23	In our October 2010 comments, we requested that for the CA Imperial East SEZ, the document should require that the flat-tailed horned lizard management areas be avoided pursuant to the existing management strategy for the species. We recommend that language specific to this species be included because of its sensitive species status designated by the BLM and the establishment of the management areas as ACECs and agreement by all signatories to the Range-wide Management Strategy (2003) that these areas are essential to the conservation of the species. Please clarify whether or not these management areas will be excluded from development.	
C.2.1.5.9	C-46/Table C.2.1-1	The East Mesa flat-tailed horned lizard management area shares its southern boundary with the proposed Imperial East SEZ; known occurrences are documented immediately adjacent to the SEZ to the north and south.	
C.2.2.1	C-65/Table C.2.2-1	Desert tortoises are known to occur throughout the SEZ, albeit in a patchy distribution; the species is not limited to the western and northeastern portion of the “affected area.”	
C.4.3.5.9	C-197/Table C.4.3-1	We recommend that greater sage grouse be added to the list of special status species in Dry Lake Valley North SEZ.	

C.6.1.5.9	C-280/2	Change “Arizona Game and Fish Department” to “Utah Division of Wildlife Resources.”	
J.6	J-156/Table J.6-1	Under Mojave rattlesnake the range is listed as “extreme southwestern corner of Utah” which may be true if describing the range in Utah but is not true for this wide ranging species. Check the distribution.	
J.6	J-158/Table J.6-1	Under sidewinder check distribution as this species is found in southwestern Arizona as well.	
J.6	J-166/Table J.6-1	Under California condor include northern Arizona in range description.

U.S. Fish and Wildlife Service
Solar PEIS Statement Regarding Desert Tortoise Translocation
January 2012

The U.S. Fish and Wildlife Service remains concerned about the potential extent, magnitude, and long-term nature of biological and ecological impacts associated with utility-scale renewable energy development. Although the DPEIS estimates that less than one percent of available lands would be developed, the Mojave population of the desert tortoise is at risk of being significantly affected by the both the project-specific and cumulative effects from existing land uses and threats facing the species from solar energy development and transmission, which will cause continued habitat loss, population and habitat fragmentation, changes in water flow (both surface and ground water), introduction of environmental contaminants, mortality by vehicle encounters, increased predation by ravens and other predators, alteration of habitat due to the introduction of non-native plant species, and alteration of adjacent desert tortoise conservation areas through edge effects. Given the large area that would be available for development under the proposed solar energy program on public lands and the large acreage required by individual projects within the range of the desert tortoise, we are concerned that not enough credence has been paid to desert tortoise populations and habitat connectivity relative to project siting, and procedural constraints limit the ability to relocate project sites outside of the right-of-way (ROW) boundaries initially proposed by the applicants. Thus, translocation is being viewed as the standard measure to minimize adverse effects to the species under the solar energy development program.

Two groups of independent scientists recently expressed their concerns about translocation of desert tortoises as a means of minimizing effects of projects: “Although carefully designed translocations can be useful under certain circumstances ... simply moving animals from one area to another (likely already occupied) area is not recommended” (DRECP Science Panel 2010), and “Translocation of desert tortoises to currently occupied habitat is not recommended until results of existing research are available. The risk to wildlife populations from this type of translocation are significant and should not be propagated while multiple projects are in process that will hopefully inform managers on the true magnitude or effects of those risks” (Desert Tortoise Science Advisory Committee, October 2010). Therefore, to avoid conflicts with desert tortoises and the potential need for translocation, the FWS recommends that projects be sited on degraded lands outside high-density areas and critical habitats to the maximum extent possible. If complete avoidance is infeasible, projects should then be located at low-density sites that would necessitate the translocation of few individuals within their home ranges or to areas themselves supporting depauperate populations and/or low densities. Areas that should be excluded from solar energy development extend beyond formally designated critical habitat to also include important habitat linking populations within critical habitat or other conserved areas in order to prevent these areas from becoming isolated and disconnected from the rest of the desert tortoise’s range (see Attachments 1 and 2 for a description of our proposed linkage design and exclusion criteria).

While the FWS does not support translocation as a proven minimization measure, we concur that it may be a useful tool in some situations. Though the draft revised recovery plan for the Mojave population of the desert tortoise includes population augmentation as a strategic element within

the recovery program, the primary recovery action within this element is the development of a comprehensive population augmentation strategy under which translocations would be conducted in a rigorous, research-based approach. The FWS's Desert Tortoise Recovery Office is currently working to develop a framework that guides translocation research and establishes effectiveness monitoring metrics that will enable us to determine its value as a minimization measure. In the absence of such a strategy, we are responding to tremendous development pressures by removing animals from their existing home ranges in a largely uncoordinated, project-by-project basis that may result in significant impacts to translocated individuals, as well as to individuals that are resident to recipient sites.

Notwithstanding the concerns surrounding translocation, the FWS developed translocation guidance in August 2010 in response to the rapid influx of ROW applications. The basic considerations of the FWS guidance are designed to enable us to evaluate at a minimum level the effectiveness of translocation as a minimization measure. However, for the reasons herein, translocation is considered to be an *experimental* minimization measure requiring additional research and effectiveness monitoring based on both general and project/site-specific conditions. In addition, as project applicants and permitting agencies have witnessed through our analysis of the fast-track projects, project impacts (i.e., direct, indirect, and cumulative), potential impacts from translocation, and managing the logistics associated with translocation are more extensive and challenging than previously anticipated.

Some of the biological, logistical, political, and legal challenges that have come to the forefront include, but are not limited to:

- The need to develop clear guidelines for the complex, controversial, and evolving process of translocation under severe time constraints with little information about the long-term, population level effects of translocation (i.e., effects on disease prevalence and spread), which precludes an adequate analysis under section 7 and NEPA;
- Time constraints associated with project permitting relative to the seasonality of desert tortoise activity and obtaining data necessary to conduct analyses on the project site, proposed translocation site(s), and control sites (i.e., desert tortoise densities and disease status);
- Identification of translocation sites and the status of the lands (i.e., open to multiple uses vs. protected for conservation purposes);
- Need to quarantine animals on- or off-site; the level of expertise required of personnel developing translocation plans and handling desert tortoises;
- Timing of translocation activities and conflicts with construction schedules or funding deadlines;
- Uncertainties relative to potential effects on the recovery of the species;
- Unpredictable logistical and financial hurdles for applicants and agencies; and
- Management of translocation efforts is inherently adaptive, which results in changes in translocation plans, reinitiation of consultation, and the need for supplemental NEPA.

Additionally, significant biological risks of desert tortoise translocation involve the following:

1) Inadvertent spread of disease through the translocation of infected animals to uninfected populations. Disease screening of all tortoises to be translocated attempts to minimize the risk of

introducing infectious diseases into recipient populations and aid in detection of those diseases. However, limitations of diagnostic tests hamper our ability to ensure that infected animals are accurately screened. For example, antibodies of *Mycoplasma agassizii*, a causative agent of upper respiratory tract disease in desert tortoises, may not be detected in blood samples collected during the bacterium's incubation period; this may cause false negative results, which influences the ultimate disposition of the tortoises (i.e., translocated to recipient site or removed from the population).

2) Increased spread of disease through the translocation of uninfected animals into infected populations. Disease screening of the recipient population attempts to minimize this risk, but in contrast to the above (where ALL tortoises being translocated will be screened) only a sample of tortoises in the recipient population is likely to be tested. Survey efforts to obtain adequate samples sizes to be relatively certain that the recipient population is disease free (or at least below maximum acceptable prevalence limits) will be much more intensive than efforts employed to estimate population size.

3) Removal of previously infected animals, which may possess antibodies that aid in surviving disease outbreaks, from the wild population. Removing what may be the most robust animals from breeding population may inadvertently exacerbate the adverse effects of solar energy development. Recent research suggests that desert tortoises may possess natural antibodies to *Mycoplasma* (Hunter et al. 2008); removal of such animals could also compromise immunity of the natural population.

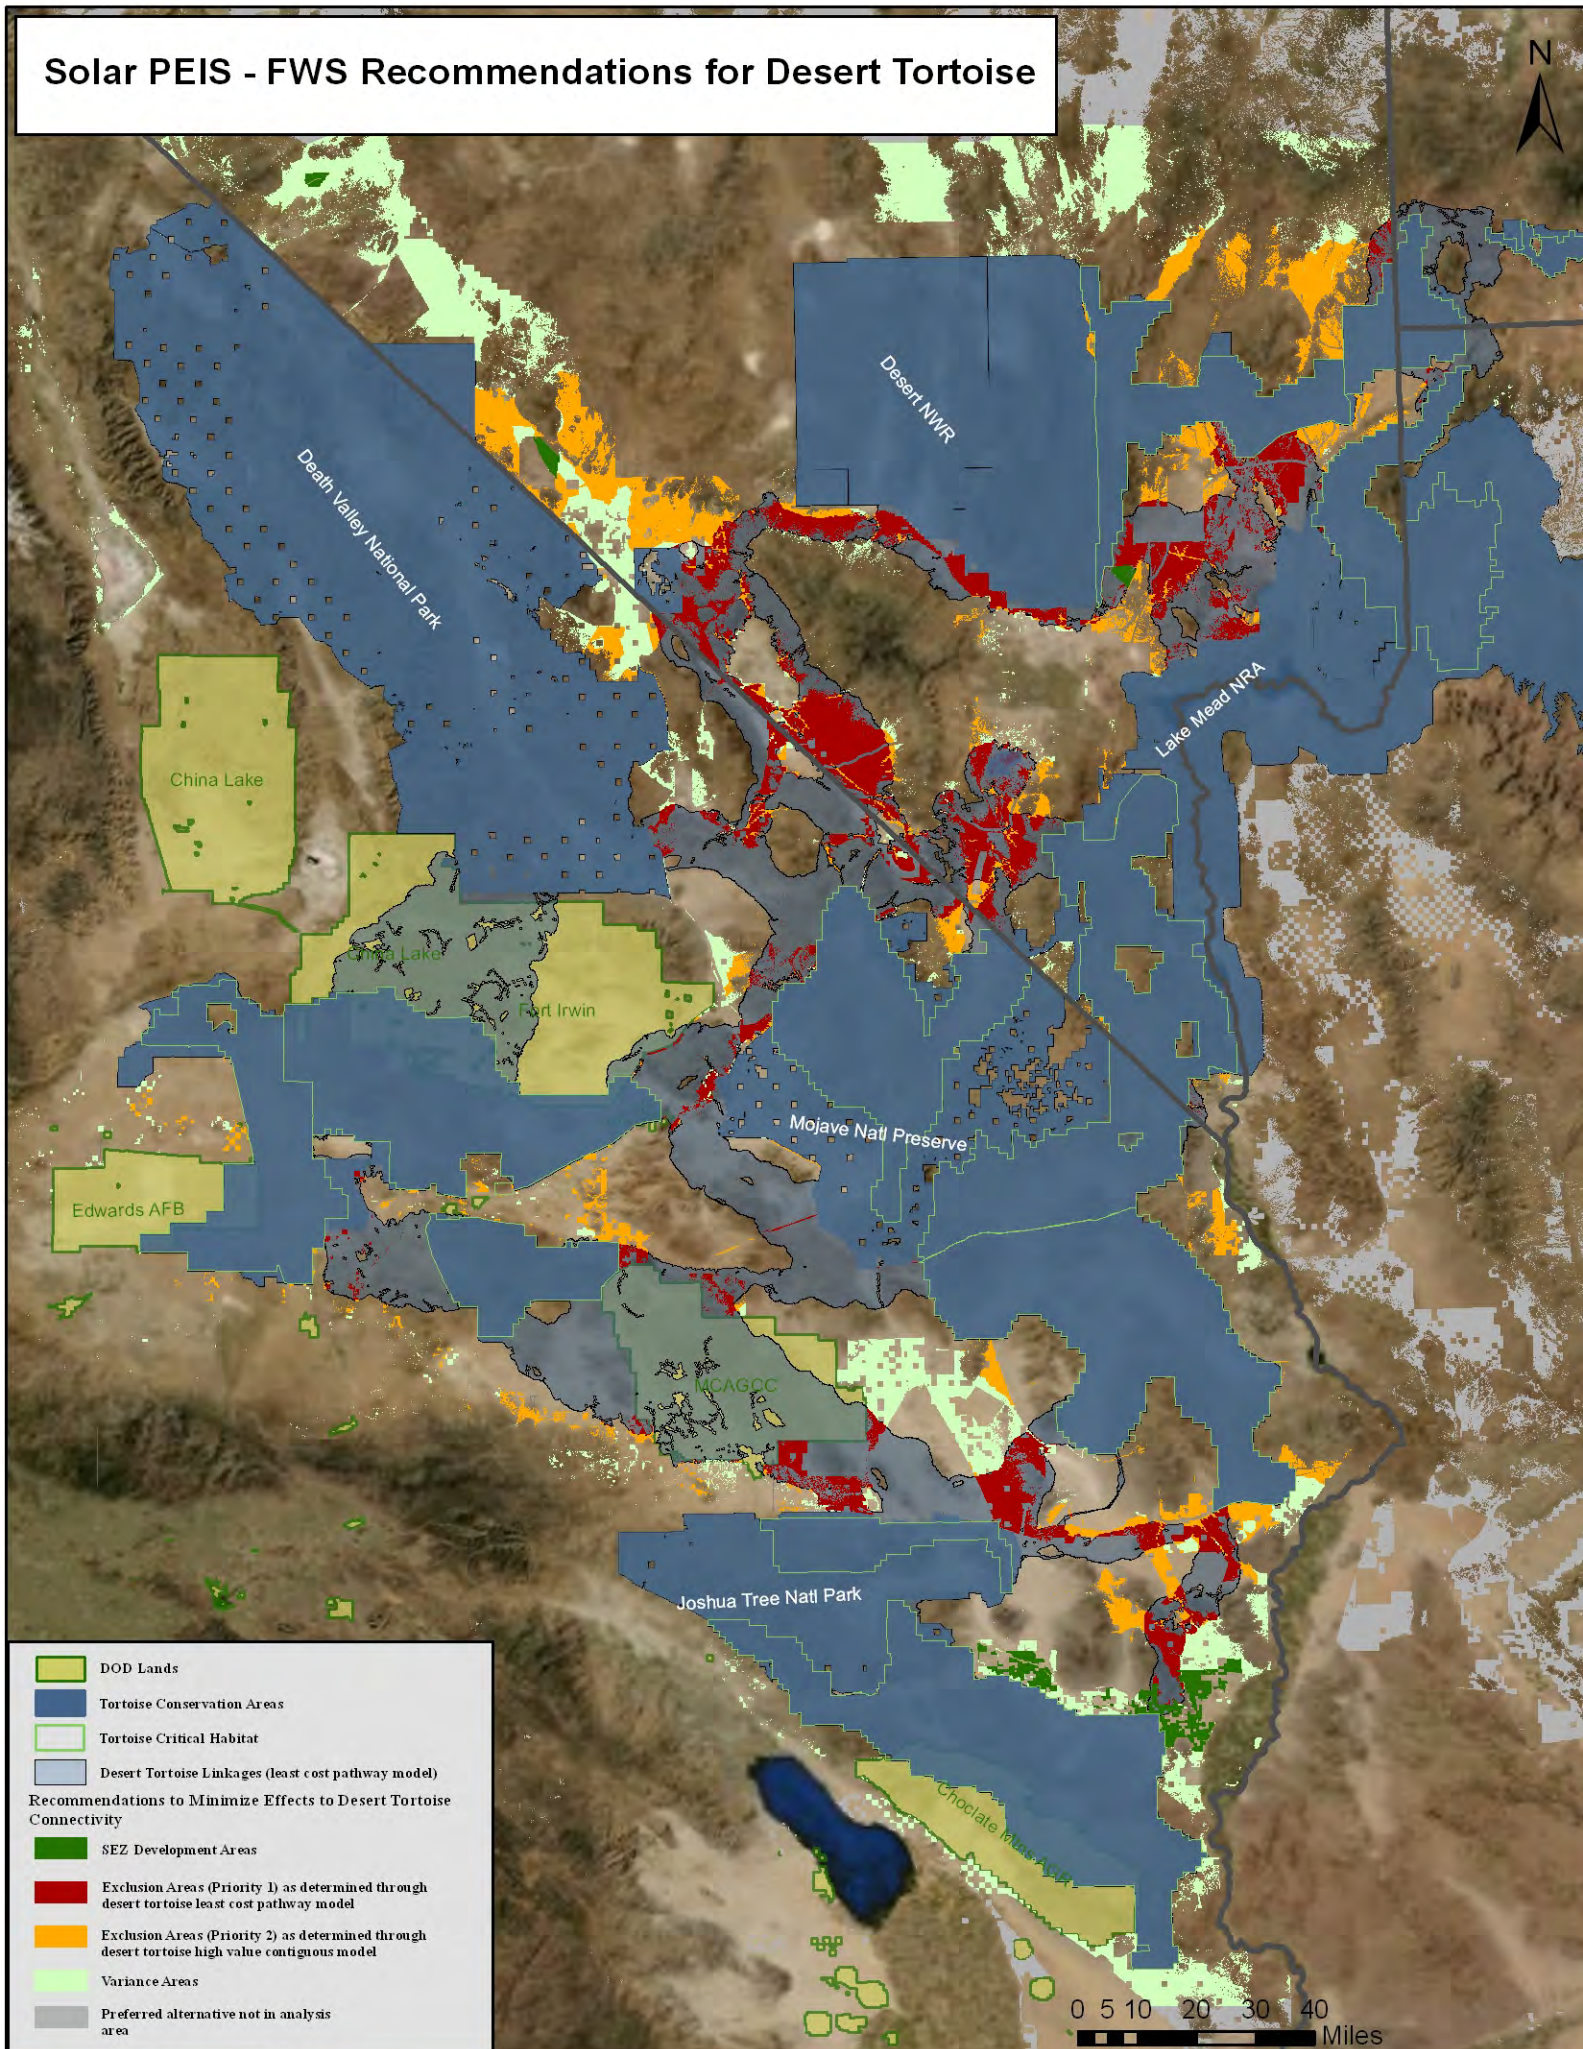

4) Surpassing carrying capacity of the translocation (recipient) area. Variation in desert tortoise habitat quality likely contributes to habitat-specific demographic rates (i.e., higher recruitment in habitats with nutritious forage) and occupancy. However, specific, measurable characteristics of habitat that contribute to high rates of desert tortoise survival, reproduction, and recruitment are not currently known (USFWS 2008). Although the FWS translocation guidance attempts to minimize this risk by identifying density thresholds above which additional tortoises could not be added to a population, translocation of large numbers of tortoises to a single site risks exceeding the resources necessary to sustain the resultant population, especially within habitat already occupied by desert tortoises. This risk is further exacerbated if the translocation area does not receive focused management attention (see below).

5) Poor survival within ineffectually managed habitat. Desert tortoise populations have declined even within designated conservation areas receiving focused management. Translocating desert tortoises to areas where management has not resulted in improved population status, or especially to areas receiving no additional management or protection, limits the effectiveness of translocation as a minimization measure.

Ultimately, the epidemiology and pathology of desert tortoise diseases, characteristics of habitat quality important to robust desert tortoise populations, and effectiveness of management actions are not sufficiently understood to ascertain the demographic effects or appreciate the potential consequences of translocation. Because of these concerns, we recommend the BLM and DOE emphasize the importance of pre-project surveys for desert tortoises and that siting of projects be focused in areas that support few, if any, individuals. The Solar PEIS should characterize

translocation as an experimental option to be employed only after all avoidance and minimization measures have been fully evaluated and implemented through reconfiguring or relocating projects. Translocation should not be presented as the standard measure to minimize impacts to the species and should be limited until ongoing research can address outstanding questions and protocols can be perfected. Finally, translocation should be applied within a structured research framework guided by the FWS to address these risks and resolve uncertainties.

Memorandum

JAN 27 2012

To: Director, Bureau of Land Management

From: Director *Jonathan J. Jarvis*

Subject: Comments on the Supplement to the Draft Programmatic Environmental Impact Statement for Solar Energy Development in Six Southwestern States

The National Park Service (NPS) welcomes the opportunity to review and comment on the Supplement to the Draft Programmatic Environmental Impact Statement (PEIS) for Solar Energy Development in Six Southwestern States (Supplement). The NPS recognizes the efforts of the Bureau of Land Management (BLM) in providing additional information and analyses in the Supplement. The modified Solar Energy Zones (SEZs) for the proposed Solar Energy Program reflect refinements that reduce conflicts with resources in some NPS-administered areas. The NPS appreciates the positive steps that BLM has taken in the Supplement to reduce the potential adverse effects of the proposed Solar Energy Program on units of the National Park System in response to NPS concerns. Some of those steps include:

- Reduced number of SEZs being carried forward for consideration in the Solar PEIS because of the extent of resource conflicts. The BLM has decided to reduce the overall number of SEZs from 24 to 17, including two SEZs that represented high potential for resource conflicts with parks: Iron Mountain and Red Sands. The elimination of these areas will reduce potential impacts to Joshua Tree National Park (NP) and White Sands National Monument (NM).
- Adjusted boundaries to reduce overall size of SEZs being carried forward in the Final Solar PEIS. The BLM has decided to reduce the footprints of a number of SEZs, which will overall reduce the total acreage available for development in proposed SEZs from 677,000 acres to about 285,000. Reduced SEZs include Riverside East (California), Fourmile East (Colorado), and Amargosa Valley (Nevada). These changes will reduce, but will not eliminate the potential impacts of solar energy development at Joshua Tree NP, Great Sand Dunes NP and Preserve, Old Spanish National Historic Trail (NHT), and Death Valley NP.
- Developed action plans to collect additional resource data and analyses to better understand potential resource impacts associated with development in SEZs. The BLM is committed to collecting additional SEZ-specific information and developing additional analyses to address data gaps and refine understanding of the potential impacts associated with solar energy facilities in these areas. This additional work will further improve our understanding of the potential impacts of solar energy development on NPS units located near Riverside East (Joshua Tree NP), Fourmile East (Great Sand Dunes NP&P and Old Spanish NHT), and Amargosa Valley and Gold Point (Death Valley NP).
- Added further design requirements to reduce impacts on visual resources for a number of SEZs being carried forward in the Final PEIS. The BLM has proposed to include limits on vertical development, including transmission towers, and apply additional measures to reduce visual contrast, glint and glare emitted from the surfaces of solar fields. These measures would be applicable for projects located in

the Riverside East (Joshua Tree NP), Fourmile East (Great Sand Dunes NP&P and Old Spanish NHT), and Amargosa Valley (Death Valley NP).

- Established a variance policy to address applications for development outside of defined SEZs in the “variance lands.” The modified preferred Solar Energy Program proposes policies that encourage early consultation and communication with the NPS to identify projects having high potential for resource conflict with NPS-administered units. Moreover, the variance policy places a greater burden on project proponents to demonstrate need, project viability, and environmental appropriateness for proposals outside of current SEZ boundaries. This is a positive step, and we appreciate the effort to articulate a process based on the BLM’s broad discretionary authority to ensure proper siting of projects that are consistent with the public interest, including the protection of parks and other special status areas under NPS management. As outlined in our comments below, the NPS believes the variance process should be strengthened to ensure that only the most environmentally appropriate projects move forward in the right-of-way process, particularly on variance lands.

While steps have been taken to build in environmental safeguards to the Solar Energy Program as noted above, more needs to be done as set forth in our attached comments in order to reduce or eliminate high potential for resource conflicts near national parks and other special areas administered by the NPS. As noted in the NPS comments on the Draft Solar PEIS, there are 53 NPS units and five National Historic Trails in the six-state study area for the Solar PEIS. These special places are integral to the landscape of the southwestern United States and possess sensitive natural and cultural resources that fall under the legal protections of the NPS Organic Act of 1916, as amended.

Over the last months, the NPS has carried out an extensive effort to map and analyze resources in and surrounding the 53 parks within the Solar Energy Program area, based on available data and information. Consistent with the 25-mile area around parks identified by the NPS in our comments on the Draft Solar PEIS, the NPS used a 25-mile study area around each park to analyze specific resource-based concerns. The study area is not in itself a recommended exclusion. The NPS analysis should be regarded as a preliminary and good faith effort to analyze potential broad-scale resource conflicts in the limited time allowed by the BLM’s project schedule. The NPS has utilized this information to further refine its recommendations for lands to be excluded from the Solar Energy Program, which it regards to be unsuitable for utility-scale solar development and of high potential conflict for park resources and values.

After carefully considering the modified action alternatives and proposed new policies presented in the Supplement, the major areas of concern are summarized as follows:

1. Exclude additional lands to minimize NPS resource conflicts. The modified Preferred Alternative still poses a significant risk to the resources and values of national parks and other special status areas administered by the NPS. The NPS has identified approximately 19 percent of the combined proposed variance and SEZ lands as having high potential for resource conflict, or approximately 3.8 million acres of BLM’s 20 million acre planning area. The NPS’s additional recommended exclusions of certain variance lands and portions of the Riverside East SEZ will significantly reduce the potential for utility-scale solar development in areas with high potential resource conflicts for parks and trails. The NPS has prepared park-by-park maps of the areas recommended for exclusion, along with detailed comments that address the resource concerns for the variance lands in question. These maps and analyses are attached hereto as Appendices A and B. The BLM will be provided the geospatial data corresponding with the maps and resource-based justifications.
2. Exclude targeted variance lands located in desert tortoise connectivity areas abutting parks. The Supplement provides new information on desert tortoise habitat connectivity in the areas around Death Valley NP, Joshua Tree NP, Lake Mead National Recreation Area, and Mojave National

Preserve. Evaluation by the NPS concludes the proposed desert tortoise mitigation measures in the Supplement do not adequately protect these critical linkages to ensure gene flow to populations outside parks and protect in-park populations of tortoise, and the NPS is recommending additional exclusion areas to protect these linkages consistent with Priority 1 areas as recommended by FWS.

3. Revise the standard exclusion area for National Historic Trails from 0.5 mile to 1.0 mile. The current BLM restriction of a 0.25 mile set back from center is too narrow to ensure important trail segments are undamaged by development, particularly where the trail alignment is uncertain. The additional corridor width would result in the exclusion of about 71,000 acres along all five trails in the Solar PEIS study area. The NPS also requests the BLM and project proponents consult with the NPS National Historic Trails Office when projects are proposed within 5 miles of identified high potential trail sites and segments. This is appropriate because trails also contain sites listed or eligible for listing on the National Historic Register.
4. Increased emphasis on development in SEZs. The Supplement proposes several positive measures to encourage developers to locate projects within SEZs, but the current process does not go far enough to ensure applications for a variance have a lower priority with the BLM. The NPS suggests that the Final PEIS clarify the priority of SEZ development by adding language explicitly stating that applications for a variance shall be deemed a lower priority for processing than applications for right-of-way within SEZs.
5. Carry out additional scientific study to better understand environmental consequences, and the efficacy of mitigation, and the landscape level. The NPS does not find that the Supplement adequately addresses the landscape level impacts from widespread utility-scale development. Moreover, additional research, analysis, and collaboration are needed to develop a process by which to assess and mitigate impacts to natural and cultural resources that are effective and meaningful.

The NPS welcomes the opportunity to continue to collaborate with the BLM on its Solar Energy Program, and renewable energy development on public lands. Renewable energy development must be “smart from the start” and sited, designed, and mitigated appropriately as to not jeopardize our natural and cultural heritage. We look forward to additional discussion on our recommendations set forth in our comments and thank you for this opportunity. If you have any questions, please contact Dr. Herbert C. Frost, Associate Director, Natural Resource Stewardship and Science, at 202/208-5652.

Supplement to the Draft Programmatic Environmental Impact Statement: Solar Energy Development in Six Southwestern States

ATTACHMENT 1 – APPENDIX A

NPS Analysis of Proposed Solar Energy Program Lands and Park-Specific Recommended Program Exclusions

Purpose: The NPS performed an analysis of lands included in the Proposed Solar Energy Program under the Preferred Alternative, Draft Programmatic Environmental Impact Statement (Solar PEIS). This analysis helped NPS to determine on, a park-by-park basis, those areas that represent a high potential for resource conflicts with park resources and should be removed from the proposed program. The analysis was performed to facilitate further discussion with BLM regarding additional protective measures that would more fully protect resources and values of NPS units potentially affected by the proposed program and to identify measures that would allow NPS to support the Preferred Alternative. The NPS conducted a thorough review to identify lands to exclude from the proposed Solar Energy Program, in order for the proposed program to more fully protect NPS units from landscape-scale and local-scale adverse impacts.

The outcome of the analysis is a set of targeted exclusion areas near NPS units that, if removed from the program, would reduce the areas near parks where utility-scale solar energy development represents a high potential for resource conflict. As discussed in Chapter 2.2.2.1 and Table 2.2-1 of the Solar PEIS, the BLM anticipates further adjustments to the footprint of the Preferred Alternative, and the information provided herein is needed to inform the BLM of the adjustments needed to protect resources and values administered in national parks and national historic trails. The NPS recommendations for additional exclusions represent a good-faith effort to ensure the footprint of the Solar Energy Program is properly structured to recognize renewable energy imperatives while also protecting treasured national park resources and landscapes.

Analysis Scope and Method: Generally speaking, there is a dearth of park-scaled information about resource conditions external to NPS managed areas. As a result, the project relied on geospatial information available at regional levels or other surrogate information to represent NPS interests or concerns. The NPS developed a methodology using a park's geographic context to assess the implications of solar energy development on the proposed variance and SEZ lands near parks. To establish a reasonable analysis extent, the NPS examined resources from 0-25 miles from each park's boundary; our Area of Analyses (AOA). A resource indicator geodatabase containing base resource GIS layers, and where available, park-specific data, was developed to aid each park's review of potential resource conflicts. A standard set of analytical output layers identifying potential resource conflicts were produced for each park, each layer depicting the variance and SEZ lands overlain with the resource condition data. The standard set of layers included maps that depicted the physical setting, land use/cover, protection status, threatened and endangered species (critical habitat), wildlife habitat (connectivity and fragmentation), viewsheds, nighttime lights, watersheds, and wetlands.

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

The NPS utilized geospatial data provided through Solar Energy PEIS public website to depict lands available under the preferred Solar Energy Program alternative. All PEIS lands located within 25 miles were clipped and displayed with park boundary data to describe resource conditions within the AOA. The source of the PEIS data is:

Solar Energy Zones and PEIS Areas: Solar Energy Development Programmatic EIS GIS:

<http://solareis.anl.gov/maps/gis/index.cfm> - "New GIS Data Files for the to the Draft Solar PEIS" (download data October 6th, 2011)

The following table provides a matrix view of the resource conditions for which analytical output layers were produced using standard, widely available information, and the potential resource conflicts for which this information can be used to describe landscape-level impacts associated with utility-scale solar energy development.

Resource Condition \ NPS Implication	Air Quality	Cultural Landscapes	Fugitive Dust	Flood Potential	Habitat Connectivity	Habitat Quality	Historic Integrity	Landscape Fragmentation	Scenic Views	Visitor Experience	Water Quantity	Water Quality	Wildlife Migration	Wildlife Mortality
Critical Habitat					X	X		X					X	
Land Ownership		X			X		X	X					X	
Landscape Permeability		X			X			X					X	X
Naturalness Index		X				X		X						
Nighttime Lights						X	X		X	X				
Protected Areas					X	X	X	X						X
Roadless Natural Areas	X	X	X		X		X	X	X				X	X
Upstream Watersheds				X							X	X		
Viewsheds		X					X		X	X				
Water Erodibility (Soils)				X	X	X					X	X		
Wetlands				X		X					X	X		
Wind Erodibility (Soils)	X		X		X	X								

Attachment 1 – Appendix B reviews the data layers selected by NPS for the resource condition analysis and provides a context for the application of these layers in the park-specific review of potential resource conflicts. An example set of output layers is also provided. The geospatial information associated with each data layer for each park will be transmitted to the BLM in digital form.

Results of the Analysis: The standard output layers (see Appendix B-NPS Geospatial Analysis of Proposed Solar Energy Program Lands for a discussion of the standard output layers) were reviewed by parks, regional offices and national resource program offices to develop an understanding for the areas where high potential for resource conflicts occur proximate to the NPS units in the study area. Reference maps were generated for each park unit to depict the variance and/or SEZ lands that intersect with resources of concern to the park. The conflicts with these resources were annotated on the map and summarized in written form. To simplify the exclusion area map representation, multiple layers were condensed into a single representation of areas where potential resource conflicts were

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

identified by NPS staff. These areas recommended for exclusion alternatively reflect a high potential for a single resource conflict, or a combination of multiple resources that reflect a high potential for conflict. In some cases, the exclusion areas represent multiple lines of evidence of potential resource conflicts. For example selected exclusions may represent multiple landscape-level data relating to important connectivity areas for habitats, (e.g., a combination of roadless natural areas and landscape permeability) increasing confidence in the likelihood of impacts to protected species. In other cases, exclusions represent a high potential for conflict with a single resource. In both cases, the decision to select areas for exclusion is based upon a determination that cumulative development of the selected exclusions would result in unacceptable impacts to NPS resources. To assess the implication of these exclusion areas, the geospatial data for the exclusion areas must be intersected with the current datasets for Solar Energy Zone and variance lands to calculate the resulting differences in the overall Solar Energy Program footprint.

The NPS provided standard geospatial output layers for each of the park units in the six-state study area. Park- provided responses with site-specific exclusion recommendations are reported in the following state-by-state sections of Appendix A.

The written comments are provided in the tables below to document each park’s justification of recommended exclusions for variance and/or SEZ lands. Park-centered maps provided in this appendix additionally provide geographic context for areas where exclusions are recommended. Linkage between the mapped conflict areas and their respective narratives are provided in digital form; these geospatial data will be provided to BLM under separate transmittal. Also provided in this appendix are state-specific maps, generated for quick reference to the areas recommended on a state-by-state basis.

The following table summarizes the overall results of the NPS analysis.

NPS Summary of PEIS Lands in the NPS Area of Analysis and Requested Exclusions by State

STATE	Total PEIS Acreage	PEIS in 25 Mile NPS Unit and Trail AOA	NPS Exclusions (Units and Trail 1/2 mile)	%NPS Requested Exclusion versus total PEIS by State	%NPS Requested Exclusion versus total PEIS within 25 mile AOA
AZ	3,384,763	1,847,064	1,004,128	0.30	0.54
CA	1,366,798	1,016,233	644,448	0.47	0.63
CO	111,060	78,583	10,510	0.09	0.13
NM*	4,292,254	2,045,802	586,502	0.14	0.29

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

NV	9,207,294	2,915,646	1,196,570	0.13	0.41
TX	19	19	0	0.00	0.00
UT	1,962,671	885,581	419,819	0.21	0.47
Totals	20,324,857	8,788,929	3,861,976	0.19	0.44

Conclusions of the Analysis:

1. Exclusions recommended by NPS represent areas where siting of utility-scale solar energy facilities pose a high potential for resource conflicts. The exclusion of these areas from the Solar Energy Program would reduce, not eliminate, these conflicts. For some parks, multiple resource conflicts are associated with the identified variance or SEZ lands. Other parks have identified single resource conflict issues, e.g., viewsheds. The NPS did not attempt to prioritize the number or type of resource conflicts represented in the data. The existence of a single resource conflict, in many cases, is the basis for a recommended exclusion. The variance and SEZ lands exclusions represent about 19 percent of the total acreage of the proposed Solar Energy Program. The targeted exclusions represent a significantly smaller area than all variance lands and SEZs within 25-miles of parks and trails.
2. Exclusions of connectivity corridors recommended by NPS further protect the integrity of desert habitats in parks. The NPS also identified exclusion areas coincident with areas described in FIGURE 2.2-2, Desert Tortoise Conservation Areas and Proposed Connectivity Area, p2-36. In Chapter 2.2.2.3.1, Variance Process, options are proposed for considering applications in variance areas within the range of desert tortoise and within proposed connectivity areas (see FIGURE 2.2-1). The NPS reviewed the proposed connectivity areas within the AOA to determine if the criteria outlined under Option 2, page 2-35, are protective of desert tortoise habitats within parks. The NPS identified 1,364,172 acres of variance lands within proposed connectivity areas that are coincident with park boundaries; these should be excluded to ensure protection of desert tortoise populations within the parks.
3. Exclusions of areas having a high potential for resource conflict with parks leaves an adequate area for the proposed Solar Energy Program to meet long-term solar energy program objectives. The recommended areas for exclusion from the proposed Solar Energy Program leave a significant acreage within which to implement the proposed program, according to the Reasonably Foreseeable Development Scenario (RFDS). Under the RFDS, an estimated 214,119 acres are required to attain a 24,000 MW goal for the program. The additional acreages of SEZs carried forward in this PEIS, may not be adequate to meet the stated energy goal of 24,000 MW, but the program lands remaining after exclusion of NPS recommended areas would be more than adequate to reach the energy production goal.

State-by-State Review of Park Exclusions:

The following six sections present park-specific analyses and maps of proposed Solar Energy Program lands that are recommended for exclusion from the program. The sections are divided by state, and where park analysis encompass more than one state, the park level

Supplement to the Draft Programmatic Environmental Impact Statement: Solar Energy Development in Six Southwestern States

analysis is placed under the state containing the higher amount of acreage recommended for exclusion. Each park analysis contains a narrative in tabular form and a map that displays the areas recommended for exclusion. The area displayed represents the aggregate of resource conflict areas, i.e. the maps present a snapshot of the total resource conflict area. The NPS geospatial data used to generate these maps contain the data that link individual polygons to resource conflicts and will be provided to BLM under separate transmittal.

Each park-based map contains an identifier to denote the data layers contained in the geospatial data. Standard data layer nomenclature is used to link the datasets used to produce the map to the justification narratives. An identifier is assigned to each resource conflict category as indicated in the table below. This nomenclature is combined with park identification codes to create unique data layer codes. For example, DEVA_1 and GRCA_1 represent datasets depicting the intersection of wind erodible soil polygons with Solar Energy Program lands in the AOA for Death Valley NP and Grand Canyon NP. Each spatial data set contains polygons that capture single or multiple combinations of these resource themes. A combined resource conflict dataset may look like DEVA_10_11 or GRCA_1_7. Again, the geospatial dataset attribute table information contains the discrete combinations used to produce the overall resource conflict maps shown in the following sections.

Resource	Identifier
Wind Erodibility (Soils)	1
Water Erodibility (Soils)	2
Wetlands	3
Upstream Watersheds	4
Protected Areas	5
Critical Habitat	6
Roadless Natural Areas	7
Naturalness Index	8
Landscape Permeability	9
Nighttime Lights	10
Viewsheds	11

Finally, it is important to note that the park level analysis and maps focus on high potential for resource conflict for an individual park. In many cases, one park's AOA may overlaps with an adjacent park's AOA —as a result, the park-specific recommended exclusion areas, in many cases, overlap. The maps depicted in the following sections do not resolve overlap.

Solar Energy Development in Six Southwestern States**

Park Name: Casa Grande Ruins NM (CAGR)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Viewsheds	CAGR_11	<p>Of principle concern to Casa Grande Ruins National Monument (CAGR) is the visual impacts that the proposed utility scale solar developments could have on the monument’s historic viewshed. CAGR was the first National Monument established as part of the National Park System, and this establishment represents a significant step in the history of the national preservation movement in the United States. CAGR is eligible for the National Register as an NHL under all eligibility criteria, exhibiting exceptional integrity. CAGR’s Cultural Landscape Inventory specifically identifies the site’s “views and vistas” as integral aspects contributing to the integrity of the monument’s National Register – eligible cultural landscape. Due to the close proximity of the variance lands and the nature of the surrounding landscape, the construction of these utility scale solar developments could introduce visual elements that are out of character with the property’s historic setting and could subsequently result in significant visual impacts to visitors. Even the relatively lower profile photovoltaic (PV) solar systems would have some visibility aspect to park visitors; certainly within 10-15 miles of the park’s boundary. Trough concentrating, Sterling Engines, or solar concentrating towers would display an even larger and taller profile, greatly increasing the potential significant impacts over the impacts associated with equivalent power generation PV systems. The park believes that the development of utility scale solar facilities identified by the monument as exclusion zones (see attached map) would constitute an adverse action that would diminish the core significance and integrity of CAGR.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Fort Bowie NHS (FOBO)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Nighttime Lights	FOBO_10	All lands 10-15 miles from the park have significant night sky values for the park. Variance lands north and south of the park for 20 miles from the park are in an area of particular dark skies too. Lands further to the northwest have night sky potential impacts for the park but lie closer in alignment with a significant light source in that direction. NPS requests areas north and south of the park be excluded, and that BLM considers the lands to the northwest of the park as acceptable to NPS if adequate light mitigation is applied.
Viewshed	FOBO_11	Narrow cones of viewshed exist to the north-northeast from the park, intersecting variance lands proposed for Solar development. These areas would be of lower priority from a viewshed sense than the lands identified below but they still maintain their value as high priority night sky lands. Two variance areas immediately west-northwest of the park lie within 1-4 miles of the park boundary and are within the viewshed from the park. We would expect potentially significant viewshed impacts from these lands, as the utility scale solar development would be a unique, large, man-made structure, with possible great reflectance potential visible by park visitors. We request those areas be excluded.

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Grand Canyon NP (GRCA)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
<p>Wind Erodibility</p>	<p>GRCA_1</p>	<p>Proposed developments on variance lands north of the central portion of the park have a high potential for causing wind erosion. GRCA is a park with a Class 1 airshed under the Clean Air Act and managed as such. A methodology applied for determining visibility impacts (Viscreen) is the method required under the FLAG workgroup or (CALPUFF) http://nature.nps.gov/air/permits/flag/docs/FLAG <i>Air Quality in National Parks</i> <i>2008 Annual Performance & Progress Report</i> <i>Natural Resource Report NPS/NRPC/ARD/NRR—2009/151</i> Violation of the National Ambient Air Quality Standards (NAAQS) from potential utility scale solar developments close to the park is a concern. A quantitative measure of the impact could be illustrated in the Solar PEIS through computation of the consumption of Class I and II increments by the solar developments.</p> <p>Particulate matter and soils derived from ground disturbances in the utility scale development (clearing and construction, operation with long-term exposed soils, and access roads) could enter the park and potentially impact air quality, land surface vegetation and habitats, and eventually be a source for water erodibility. The subsequent erosion of these deposited materials would move material towards drainages and streams, and eventually reach the Colorado River. At that point water quality impacts to organisms including endangered fish (humpback chub) could potentially be large. A recent example would be significant flash flood events that have occurred in Havasu Creek drainage from sources tens of miles away. http://www.blm.gov/az/st/en/prog/mining/timeout/deis.html</p> <p>The park requests that variance lands north and west of the park’s boundary and in the wind erodibility group 1 and 2, and 15 miles of the park boundary be excluded.</p> <p>Additional reference: ————. 2007. 2006 annual performance and progress report: air quality in national parks. Dated October 2007. Available at: <http://www.nature.nps.gov/air/Pubs/pdf/gpra/GPRA_AQ_ConditionsTrendReport2006.pdf>.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		Accessed February 2010.
Water Erodibility	GRCA_1	<p>Please see comments in Comment Section: Wind Erodibility above.</p> <p>There would also potentially be indirect impacts to vegetation resources in riparian areas, seeps and spring due to the higher rates of erosion and sedimentation in drainages. There would be potential downstream impacts from road and infrastructure development sediment, particularly in Tuckup and 150-Mile Canyon watersheds.</p>
Upstream Watersheds	GRCA_1	<p>Please see comments in Comment Section: Wind Erodibility above.</p> <p>Downstream Effects from road and infrastructure development sediment, and invasive species, particularly in Tuckup and 150-Mile Canyon watersheds (GRCA S&RM staff and management.)</p> <p style="text-align: center;">Additional Water Resources Comment</p> <p>The park has concerns about a water source for the development of utility scale solar facilities. Groundwater is scarce and/or appropriated to numerous interests throughout the Colorado Plateau and in proximity to the park. Even an entirely photovoltaic (PV) solar development would require water for many reasons. Potential impacts to groundwater that would affect water volume or quality in GRCA are serious and should require greater evaluation in the Solar PEIS than as currently written.</p>
Protected Areas	GRCA_5	<p>Substantial quantities of protected area lands extend to more than 50 miles from the park's boundary. The variance lands frequently exist in proximity to or adjacent to these protected areas: Northeast of the park boundary on the edge of the Paria Plateau (less than 20 miles), northwest and southwest of the lowest downriver portion of the park (less than 5 miles), and immediately north of the park's central area along the Colorado River. The park recommends that lands closer than 1 mile from the identified Protected Areas be excluded to protect these resources.</p> <p>References: National Park Service (NPS). 1995. <i>General Management Plan: Grand Canyon National Park</i>. National Park Service, Denver Service Center. August 21. ———. 1988. <i>Grand Canyon National Park Backcountry Management Plan</i>. September 1988.</p>
Critical Habitat	GRCA_6	GRCA has extensive lands within and nearby their boundary that possess critical habitat for the Mexican Spotted Owl, and extensive riparian and river miles of critical habitat (approximately 60

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>miles) along the central portions of the park (and the Colorado River) for the endangered humpback chub. Some of the BLM variance lands within the park’s area of analyses and along portions of the North Rim are immediately adjacent to or bordering these critical habitat areas. These critical habitats areas and endangered species could be impacted by utility scale solar facilities both during their construction and during the facility’s operation (dust, noise, personal access, etc). The park requests that variance lands within 1 mile of the critical habitat boundaries and within the 25 mile park’s area of analysis be excluded.</p>
Roadless Areas	GRCA_7	<p>Potential effects from developing and maintaining roads in previously undeveloped areas adjacent to the park boundary include looting of and indirect damage to archeological sites, off-road vehicle access, poaching, other illegal ingress, noise, etc. There are also potential impacts to wildlife corridors and flyways. While mitigations could include gating roads, other BLM lands have experienced increased ORV use as roads are maintained or increased for development facilities. This would include illegal use of ORVs in the Park adjacent to the solar developments areas. While many of the variance lands north of the central portion of the park have some road penetration, significant areas are also roadless in nature. The park requests exclusion of the variance lands that border roadless areas identified along existing roads and within the park’s area of analysis (25 miles from the park’s boundary)</p>
Naturalness Index	GRCA_8	<p>The naturalness index for GRCA and surrounding lands is rated high for more than 20 miles in all directions from the park’s boundary. The experience for park visitors and sensitive wildlife is one of lands being nearly pristine and unaffected by man’s intrusion. The appreciation of the natural sound is also a highly valued resource to the park, wildlife and park visitors. Construction and operation of a utility scale solar development close to the park would potentially cause significant impacts.</p> <p>GRCA specifically manages the certain adjacent land areas on the Kanab Plateau and Marble Platform to maintain an undeveloped character. Within Grand Canyon National Park’s backcountry zoning system the Kanab Plateau and canyon’s adjacent to Marble Platform areas are zoned as primitive, heavily restricted from development. Introducing any utility scale solar developments could potentially impact the quality and type of recreation opportunity Grand Canyon National Park has committed to managing and providing the public. An increase in development close to those areas will impact the type of recreational experience Grand Canyon National Park is managing and providing to visitors. Visitors specifically choose those areas in lieu of the South Rim because of the primitive character of these areas.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>The park requests that all variance lands rated high in naturalness be excluded 20 miles out from the park’s boundary.</p> <p>References: Ambrose, S. 2008. <i>Sound Levels and Audibility of Common Sounds in Frontcountry and Transitional Areas in Grand Canyon National Park, 2007–2008</i>. ———. 2010b. <i>Sound Levels of Equipment and Operations at the Arizona 1 Uranium Mine in Northern Arizona, March 20, 2010 to April 8, 2010</i>. June 21. National Park Service (NPS). 1995. <i>General Management Plan: Grand Canyon National Park</i>. National Park Service, Denver Service Center. August 21. ———. 1988. <i>Grand Canyon National Park Backcountry Management Plan</i>. September 1988. ———. 2009a. <i>Aquatic Biology Inventory of Springs and Seeps: Uranium Mining Withdrawal EIS</i>. Draft Final Report. Colorado Plateau Cooperative Ecosystem Studies Unit. December 11.</p>
<p>Nighttime Lights</p>	<p>GRCA_10</p>	<p>Night sky is a valuable resource for GRCA and for the visitor experience while they are at the park. Very few small to large light sources lie within easy viewing or are discernible from most of the park at night.</p> <p>The park requests the exclusion of all variance lands 20 miles from the park’s boundary to protect that resource.</p> <p>References: 2006a. Night Sky Quality Monitoring Report, Parashant National Monument, Arizona, McDonald Flat, February 24, 2006. Available at: <http://nature.nps.gov/air/lightscapes/monitorData/para/mF20060224.cfm>. Accessed August 30, 2010. National Park Service (NPS). 1995. <i>General Management Plan: Grand Canyon National Park</i>. National Park Service, Denver Service Center. August 21.</p>
<p>Viewsheds</p>	<p>GRCA_11</p>	<p>The entire Kanab Plateau is covered in visible mining claims up to the park boundary and within site of the park boundary. The impact of the mining exploration activities is already extremely disruptive to the visual landscape of the park recreational visitors. Road surfaces have already been improved and are affecting access on the Kanab Plateau. The visible mining claims are often within site of the park’s boundary fence. Utility scale solar developments would have a larger footprint and noticeable structure (in height, size, color, reflection) than even many of the mining claims on BLM lands in the area.</p>

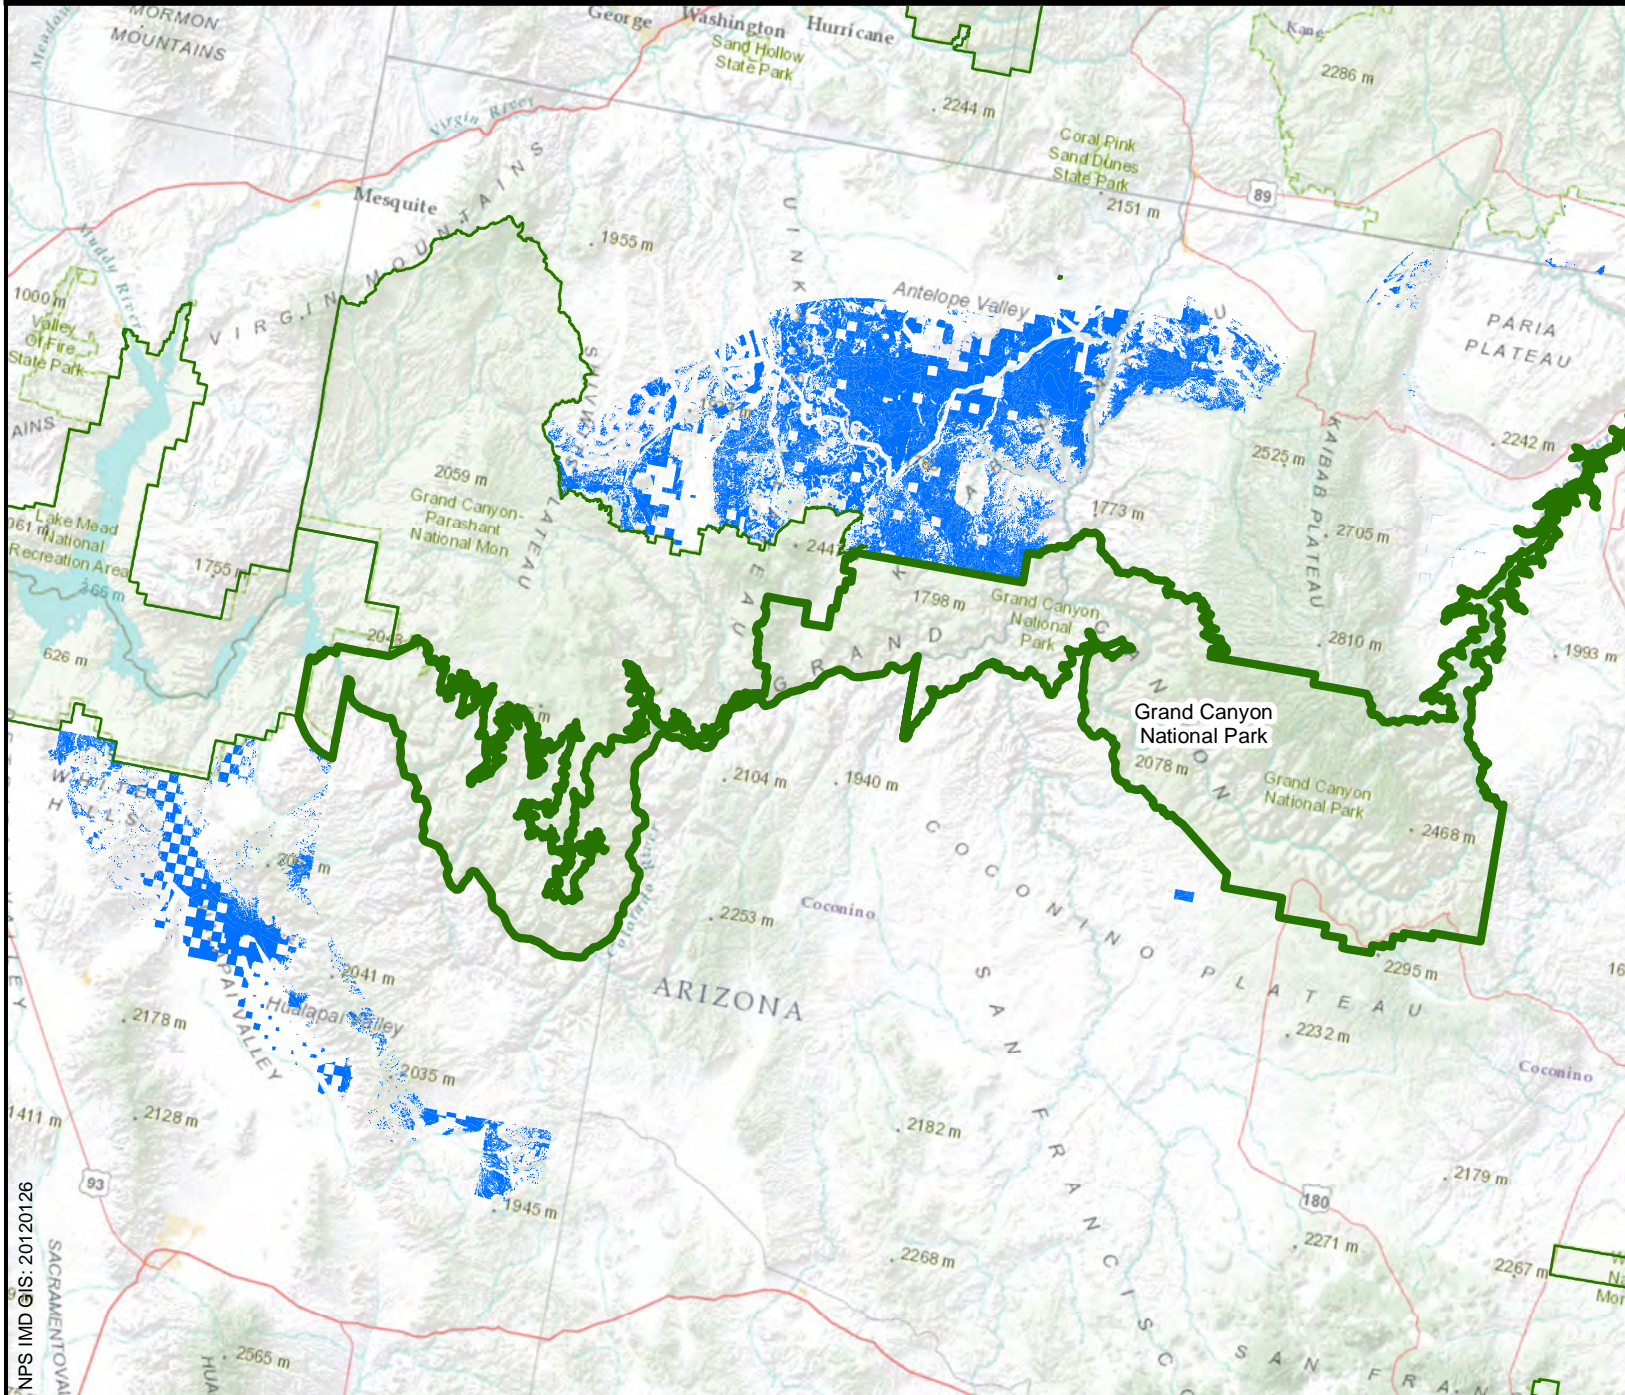

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>Viewsheds in many directions from KOPs in GRCA highlight many variance lands in proximity to the park that would impact visitor experience if developed. The park requests the exclusion of all variance lands 20 miles from the park’s boundary to protect that resource.</p> <p>Reference: http://www.blm.gov/az/st/en/prog/mining/timeout/deis.htmlz</p>
		<p style="text-align: center;">Additional Background Comments</p> <p>Cultural Resources There are potential impacts to Traditional Cultural Properties throughout the park</p> <p>Please note within Grand Canyon National Park there are numerous special management areas such as proposed wilderness areas, flight free areas, and a National Register district that are all within the World Heritage Site and adjacent to the proposed withdrawal areas.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Parashant National Monument (PARA)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	PARA_1	Dust is the number one source of PM-10 (Particulate Matter 10 microns or smaller) air pollution in the area surrounding PARA. Soils with high wind erosion potential exist around much of the Monument boundary. Construction and post-construction activities, service road maintenance and use, loss of vegetation, and disturbance of soil crusts caused by development in the desert cause wind erodibility Classes 1 and 2 soils to produce significant quantities of fugitive dust, impacting air quality and visibility in the Monument and surrounding areas. The park identifies all variance lands within 25 miles that have Wind Erodibility Class 1 or 2 soils and a high naturalness index, as areas of potential conflict to park resource values and recommends these areas in the 25 mile area of analysis of the park be excluded from solar development.
Upstream Watersheds, Roadless Areas, Naturalness Index, and Land Permeability	PARA_4 PARA_7 PARA_8 PARA_9	Note most of the variance lands surrounding PARA are rated as having a high Naturalness Index and some are within roadless areas and/or have moderate to high landscape permeability, as such these are high quality areas the Monument would prefer to see preserved intact. Preservation of these intact landscapes and their inherent scenic values is a primary management goal of the Monument since these areas are critical to sustaining biological species diversity and genetic diversity of resident park wildlife populations. In addition non-native and invasive weeds are commonly associated with disturbed areas and are often distributed along road corridors. Reference: ———. 2006a. Night Sky Quality Monitoring Report, Parashant National Monument, Arizona, McDonald Flat, February 24, 2006. Available at: < http://nature.nps.gov/air/lightscapes/monitorData/para/mF20060224.cfm >. Accessed August 30, 2010.
Nighttime Lights	PARA_10	The NPS manages dark night skies as a natural resource. There is increasing research showing dark sky importance to ecosystem function, and demonstrating the multiple adverse impacts of light pollution to community ecology (Longcore and Rich, 2004). Animals can experience increased orientation or disorientation from additional illumination and are attracted to or repulsed by glare, which affects foraging, reproduction, communication, and other critical behaviors. The park identifies variance lands within the 25 mile area of analysis around the

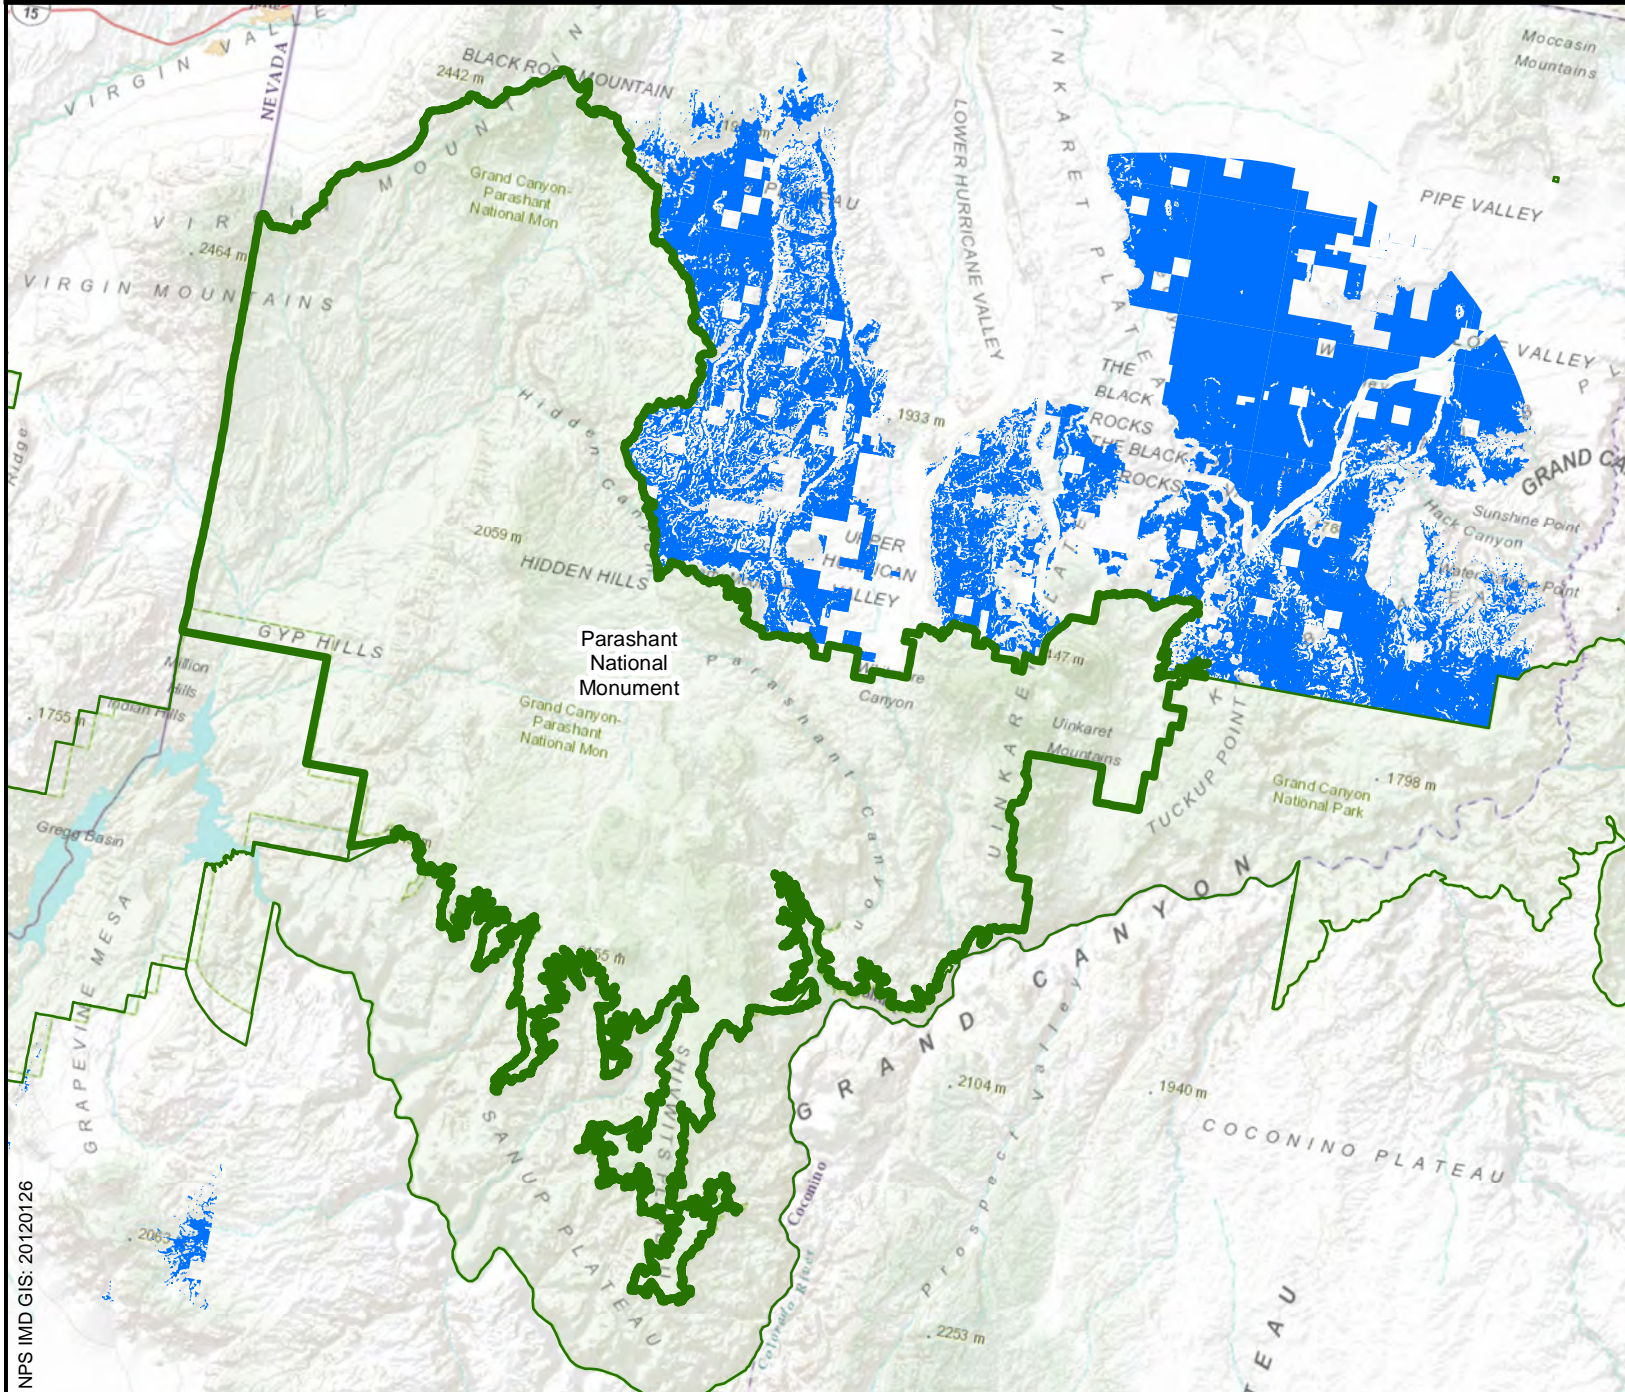

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		monument which have dark night skies, are roadless and have a high naturalness index as areas of potential NP resource conflicts. The monument’s goal is to protect these dark areas at night from impacts of nighttime light resulting from construction, operation and additional light pollution cumulative impacts related to large solar generating facilities.
Viewsheds	PARA_11	Visual resources around PARA reflect vast undisturbed open vistas. Protecting these largely undeveloped views surrounding the Monument is critical to preserving the unique visitor experience at PARA. As such, PARA requests all variance areas with line of sight visible points within the monument, which have a high naturalness index are roadless and dark at night be excluded from development.

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Petrified Forest NP (PEFO)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	PEFO_1	<p>Most of the variance lands within 25 miles of the park are classified in the wind erodibility group 2. The remaining lands are primarily in wind erodibility group 1. The majority of the group 1 and 2 areas lie southeast, southwest and west of the park, with one small set of parcels northeast of the park in group 2, and these within 4 miles of the park. Winds that regularly blow in the area surrounding the park could carry soils and fine particles from the solar development construction and operations into the park and surrounding area, degrading the visitor experience and potentially depositing soils in and around the petrified wood and numerous other plant and wildlife habitats.</p> <p>Petrified Forest National Park is a Class 1 airshed under the Clean Air Act, requiring affirmative actions by NPS to prevent degradation of the air quality. Wind derived soils can cause direct impacts to air quality (visibility and particulate quantities), decreasing visibility in the park, and affecting the visitor experience.</p> <p>The park requests that variance lands within 15 miles of the park and on erodibility soils group 1 and 2 be excluded.</p> <p>References: Field, J. P., J. Belnap, D. D. Breshears, J. C. Neff, G. S. Okin, J. J. Whicker, T. H. Painter, S. Ravi, M. C. Reheis, and R. L. Reynolds. 2010. The ecology of dust. <i>Frontiers in Ecology and the Environment</i> 8:423–430. Neff, J. C., A. P. Ballantyne, G. L. Farmer, N. M. Mahowald, J. L. Conroy, C. C. Landry, J. T. Overpeck, T. H. Painter, C. R. Lawrence, and R. L. Reynolds. 2008. Increasing aeolian dust deposition in the western United States linked to human activity. <i>Nature Geoscience</i> 1:189-195. Okin, G. S., J. E. Bullard, R. L. Reynolds, J.-A. C. Ballantine, K. Schepanski, M. C. Todd, J. Belnap, M. C. Baddock, T. E. Gill, and M. E. Miller. 2011. Dust: Small-scale processes with global consequences. <i>EOS, Transactions, American Geophysical Union</i> 92 Air Quality in National Parks 2008 Annual Performance & Progress Report, Natural Resource Report NPS/NRPC/ARD/NRR—2009/151:241-248.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

<p>Upstream Watersheds</p>	<p>PEFO_4</p>	<p>An area of variance lands approximately 4 miles northeast of the park lies immediately adjacent to a watercourse feeding into the park. The development and operation of a utility scale solar facility has potential to disturb soils long term and affect both sediments and runoff characteristics downstream into the park. Both of these impacts may affect water quality directly. The park requests these variance lands be excluded from development.</p>
<p>Protected Areas</p>	<p>PEFO_5</p>	<p>The lands identified below are relatively close to designated wilderness. Solar towers and higher profile solar developments would have the greatest potential to the viewshed from the park. Reflected glare from photovoltaic or trough type solar panels could easily be visible on these BLM lands from the wilderness. Wilderness lands must have four primary qualities to retain wilderness character, according to the Wilderness Act - untrammeled, natural, undeveloped, and a sense of solitude or opportunity for primitive recreation. The last two of these is threatened by utility scale solar developments on variance lands that that could be visible from these wilderness lands. The presence of structures and other evidence of modern human presence degrade the "undeveloped" quality sought in wilderness lands. Opportunity for "solitude" or "primitive recreation" is also degraded by signs of modern civilization adjacent to wilderness.</p> <p>PEFO is seeking exclusion for the scattered BLM variance Land sections and partial sections closest to the PEFO. There are three sections to our NE (T20N, R26E, sections 4,6,and 8), five full and three partial sections to our W (T19N, R23E, sections 18,20, part of 22, part of 24, 28, and 30 and T19N, R22E, part of section 22, all of 24, and part of 26), and portions of 7 sections a little further south on our W side (T18N, R22E, portions of sections 12,14,20, and 22, and T18N,R23E, portions of sections 8, 10, and 12). These lands are anywhere from immediately adjacent to the park boundary (and 1 mile from wilderness) to 4 miles from the park boundary and about 14 miles from wilderness.</p>
<p>Nighttime Lights</p>	<p>PEFO_10</p>	<p>Variance lands located northeast, east, southeast, southwest and west of the park lie in areas considered very dark and free of nighttime lighting. The park and its visitors value the night sky resource and request that lands 15 miles out from the park boundary and not in direct alignment with existing large nighttime light effects be excluded.</p>
<p>Viewshed</p>	<p>PEFO_11</p>	<p>See comments above under Protected Areas since many of the lands are congruent. The views from the park in all directions are a valued resource. Several key observation points in the park take in valuable natural and historic views as distant as 20 miles from the park's boundary to the north-northeast, south, southeast, and west. The park requests that variance lands proposed as potential utility scale solar developments within 20 miles of the park's boundary are excluded. However, because the views to the west of the park are more limited from KOPs in the park, the</p>

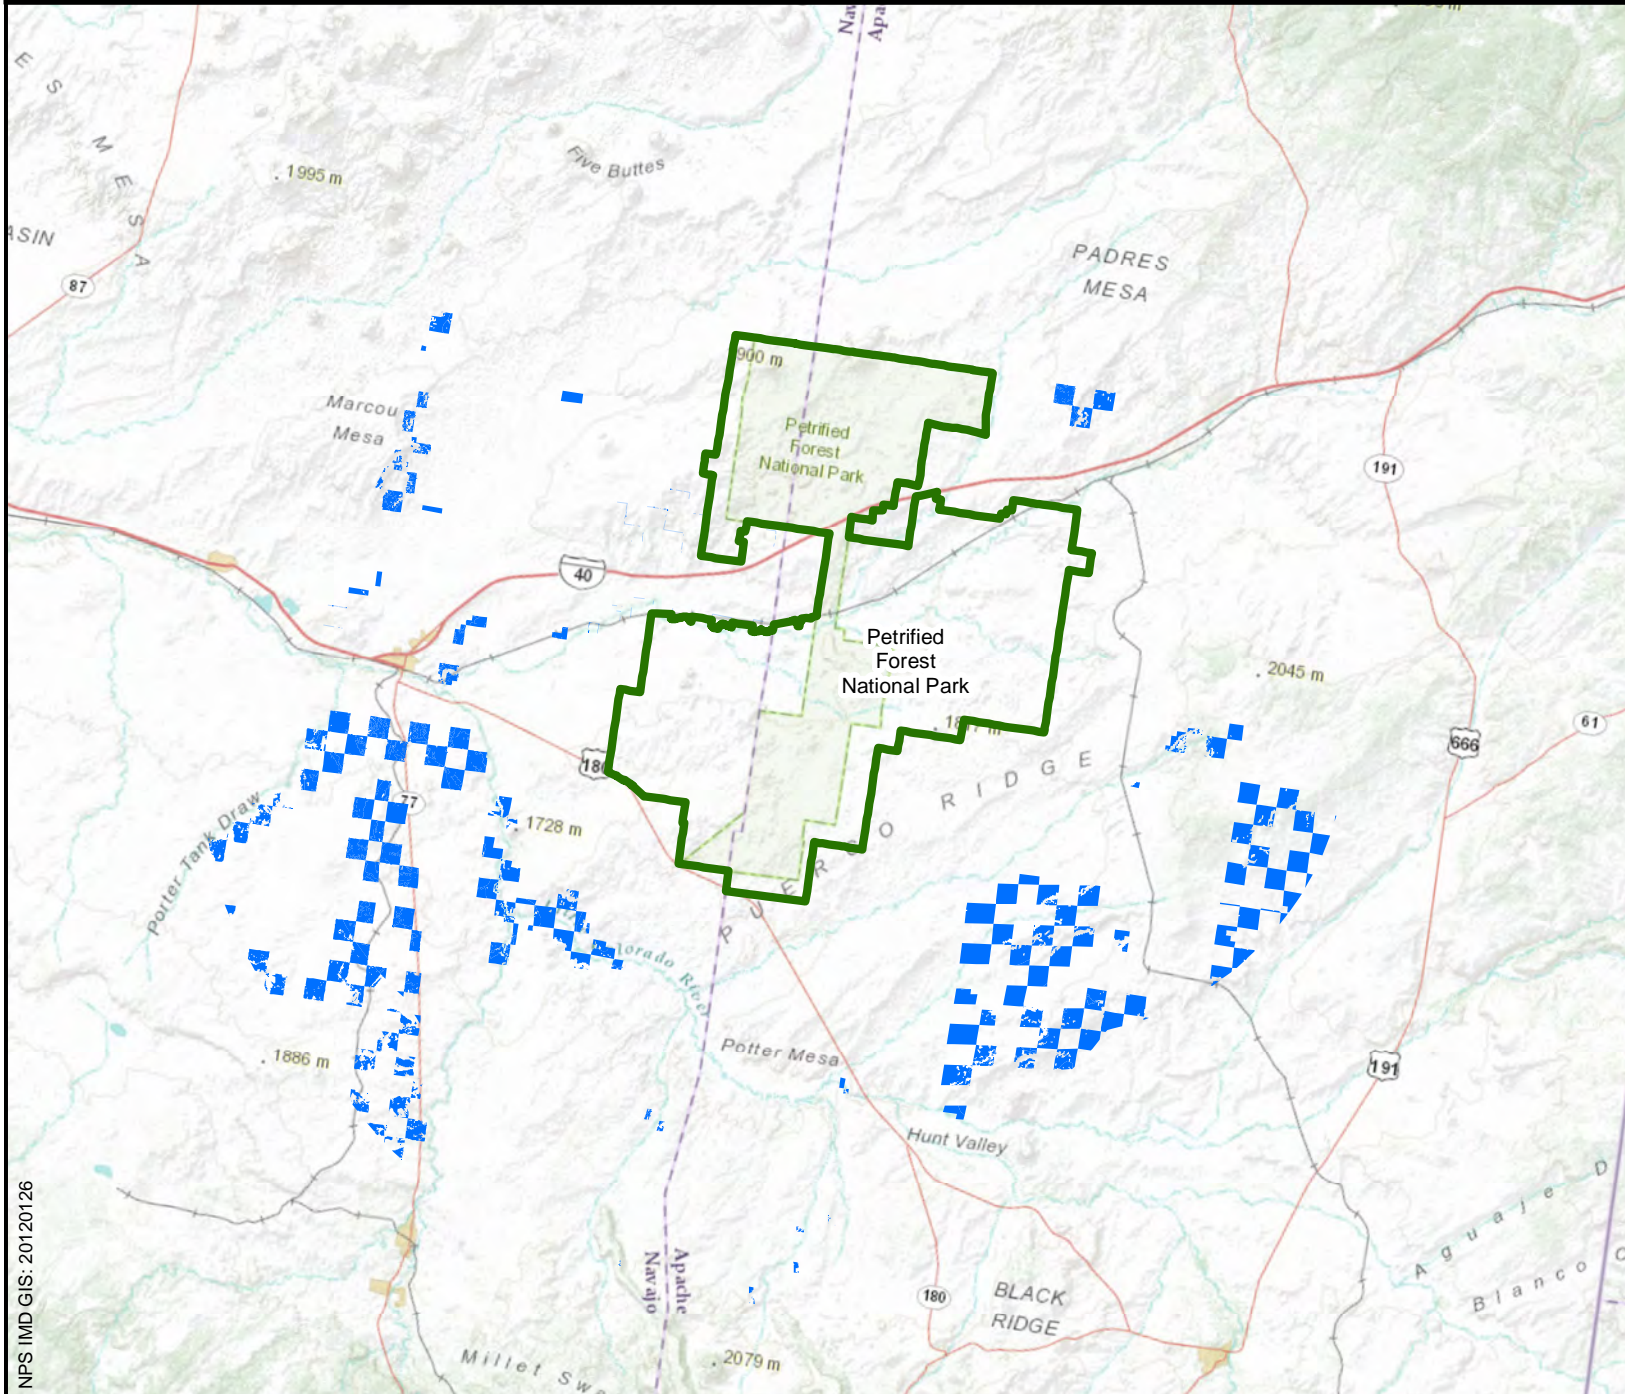

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		exclusion request is only for 15 miles from the park's western boundary.

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Pipe Spring NM (PISP)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	PISP_1	<p>Large tracts of variance lands classified in the wind erodibility group 1 and 2 exist from the northwest of the park to the southeast of the park approximately 5 miles. Additionally, another large tract of erodibility group 2 lies south and southwest of the park. Winds that regularly blow in the area could carry soils and fine particles from the solar development construction and operations into the park and surrounding area, degrading the visitor experience and potentially depositing soils in and around the historic ruins.</p> <p>The park requests that all variance lands in wind erodibility group 1 and 2 south, east and northwest of the park on erodibility soils group 2 be excluded within 20 miles of the park boundary.</p> <p>References: Field, J. P., J. Belnap, D. D. Breshears, J. C. Neff, G. S. Okin, J. J. Whicker, T. H. Painter, S. Ravi, M. C. Reheis, and R. L. Reynolds. 2010. The ecology of dust. <i>Frontiers in Ecology and the Environment</i> 8:423–430. Neff, J. C., A. P. Ballantyne, G. L. Farmer, N. M. Mahowald, J. L. Conroy, C. C. Landry, J. T. Overpeck, T. H. Painter, C. R. Lawrence, and R. L. Reynolds. 2008. Increasing aeolian dust deposition in the western United States linked to human activity. <i>Nature Geoscience</i> 1:189-195. Okin, G. S., J. E. Bullard, R. L. Reynolds, J.-A. C. Ballantine, K. Schepanski, M. C. Todd, J. Belnap, M. C. Baddock, T. E. Gill, and M. E. Miller. 2011. Dust: Small-scale processes with global consequences. <i>EOS, Transactions, American Geophysical Union</i> 92:241-248.</p>
Roadless Areas	PISP_7	<p>Many of the variance lands surrounding the park are in largely roadless areas. Based upon that classification, the park requests such variance lands be excluded if they are in the roadless natural area designated lands within 10 miles of the park boundary. Newly disturbed land from a large constructed facility from access and construction roads could open up additional natural areas to human disturbance, thus potentially affecting erodible soils and invasive plants; all potentially affecting the park.</p>
Nighttime Lights	PISP_10	<p>Dark night sky is a character that Pipe Spring NM is trying to preserve for Nighttime operations and Security lights on energy installations would have a potentially significant impact</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>on dark night sky and aesthetic values for park users. We recommend that variance lands in areas indicated on our mapping to the east, south, and west of the park boundaries be excluded from energy development 25 miles from the park to preserve the night sky darkness and the naturally dark vistas. In addition, we request that variance lands to the north of the park 25 miles from the park’s boundary be excluded for the same reasons.</p>
<p>Viewsheds</p>	<p>PISP_11</p>	<p>Various park planning and management documents, developed with public input, set forth goals for visitor experience, education and enjoyment at the Monument.</p> <p>A key document in the park’s planning history, the Master Plan, issued in 1978, states the following as a management objective of the NPS at PISP: “To cooperate with other governmental agencies, private organizations and interests, and members of the public to help ensure that regional land use changes, particularly energy development projects, do not result in impairment of the Monument’s air quality, other components of the Monument’s environment, or the experience of Monument visitors.” (See Pipe Spring National Monument Master Plan (1978), p. B-1). The noted interests and efforts of the NPS in this regard include cooperation to protect viewshed at and from PISP.</p> <p>The PISP Statement for Management – the park’s most recent management planning document, similar to a general management plan in some parks, states: “This setting on the Arizona Strip provides visitors with a sense of isolation and serenity due to the vast and spectacular expanse reminiscent of prehistoric and pioneer eras.” (Statement for Management (1995), p. 7, and, PISP Long Range Interpretive Plan (2000), p. 5. “Visitor Experience Goals” identified and listed in the park’s Long Range Interpretive Plan (LRIP) include: “Experience the isolation and wide open spaces . . . Experience some of the many sensory elements of the site”. (Id. at 9).</p> <p>A PISP “Physical Resource Information and Issues Overview Report” prepared in 2009 states the following: Air Resources and Visibility The view from Pipe Spring is extraordinary, extending across the vast expanses of plateaus that extend south to Grand Canyon 35 miles away and a similar distance to the east where the Kaibab Plateau forms the horizon. The canyons of Kanab Creek are discernible to the south east. To the southwest the flattened volcanic dome of Mount Trumbull is clearly visible 40 miles away. Because the intervening ground is generally lower than Winsor Point almost all of this plateau country is visible from the Monument encompassing an estimated 300 square miles.</p>

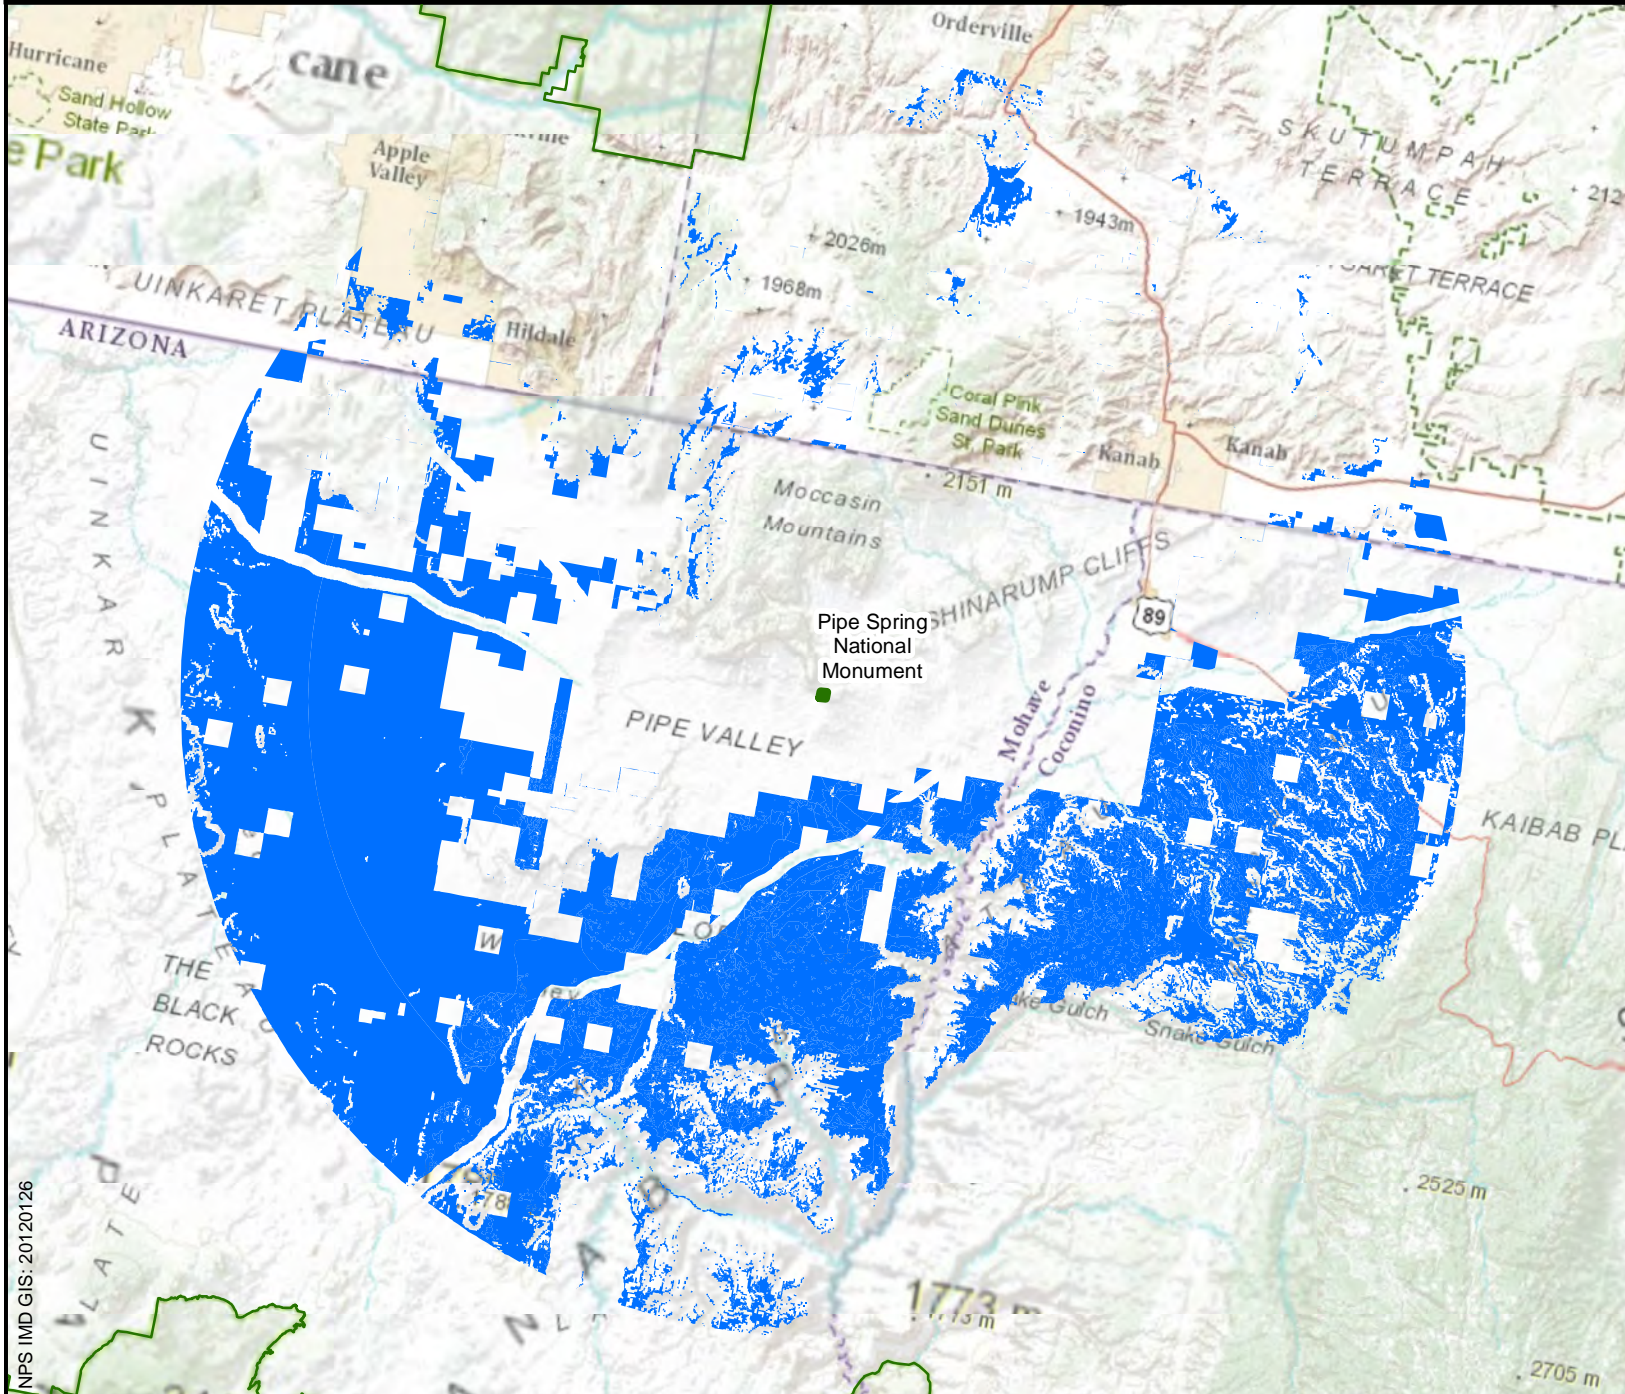

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>Such a panoramic view is rare in the United States, and is particularly significant here for three reasons:</p> <ol style="list-style-type: none"> 1. Visitors can enjoy the esthetic beauty of this lonely landscape and appreciate the great distances to “nearby” communities, and other significant geographic locations, 2. It is clear that one of the attributes that attracted Native Americans and Mormon settlers to the location is the commanding view of the surrounding terrain and the security that is provided by the high ground, as well as long distance views of other historically important resource utilization locations, conversely the unfettered and long distance view of the site from other far-distant locations aided long distance travel and transit, and 3. The exceptionally clear air that is normally present in modern times permits this view to be appreciated much as it was by the historic and pre-historic residents of Pipe Spring. <p>(PISP Physical Resource Information and Issues Overview Report (2009), p.14)</p> <p>The identification of lands in the PEIS for solar energy development includes many significant tracts of land within the 50+ mile viewshed of PISP. The potential impact of allowances for such solar energy development within the PISP viewshed should be fully analyzed and considered. Developments affecting the PISP viewshed should be avoided if at all possible</p> <p>The NPS requests exclusions of variance lands visible from Pipe Springs NM immediately west of the park for approximately 8 miles and then south and southeast of the park for 25 miles.</p> <p>References: NPS Management Policies (2006), Sec 4.1.4 – Partnerships, p. 38, Pipe Spring National Monument Master Plan (1978), p. B-1 Statement for Management (1995), p. 7, PISP Long Range Interpretive Plan (2000), p. 5 A PISP “Physical Resource Information and Issues Overview Report PISP Physical Resource Information and Issues Overview Report (2009), p.14)prepared in 2009 .</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

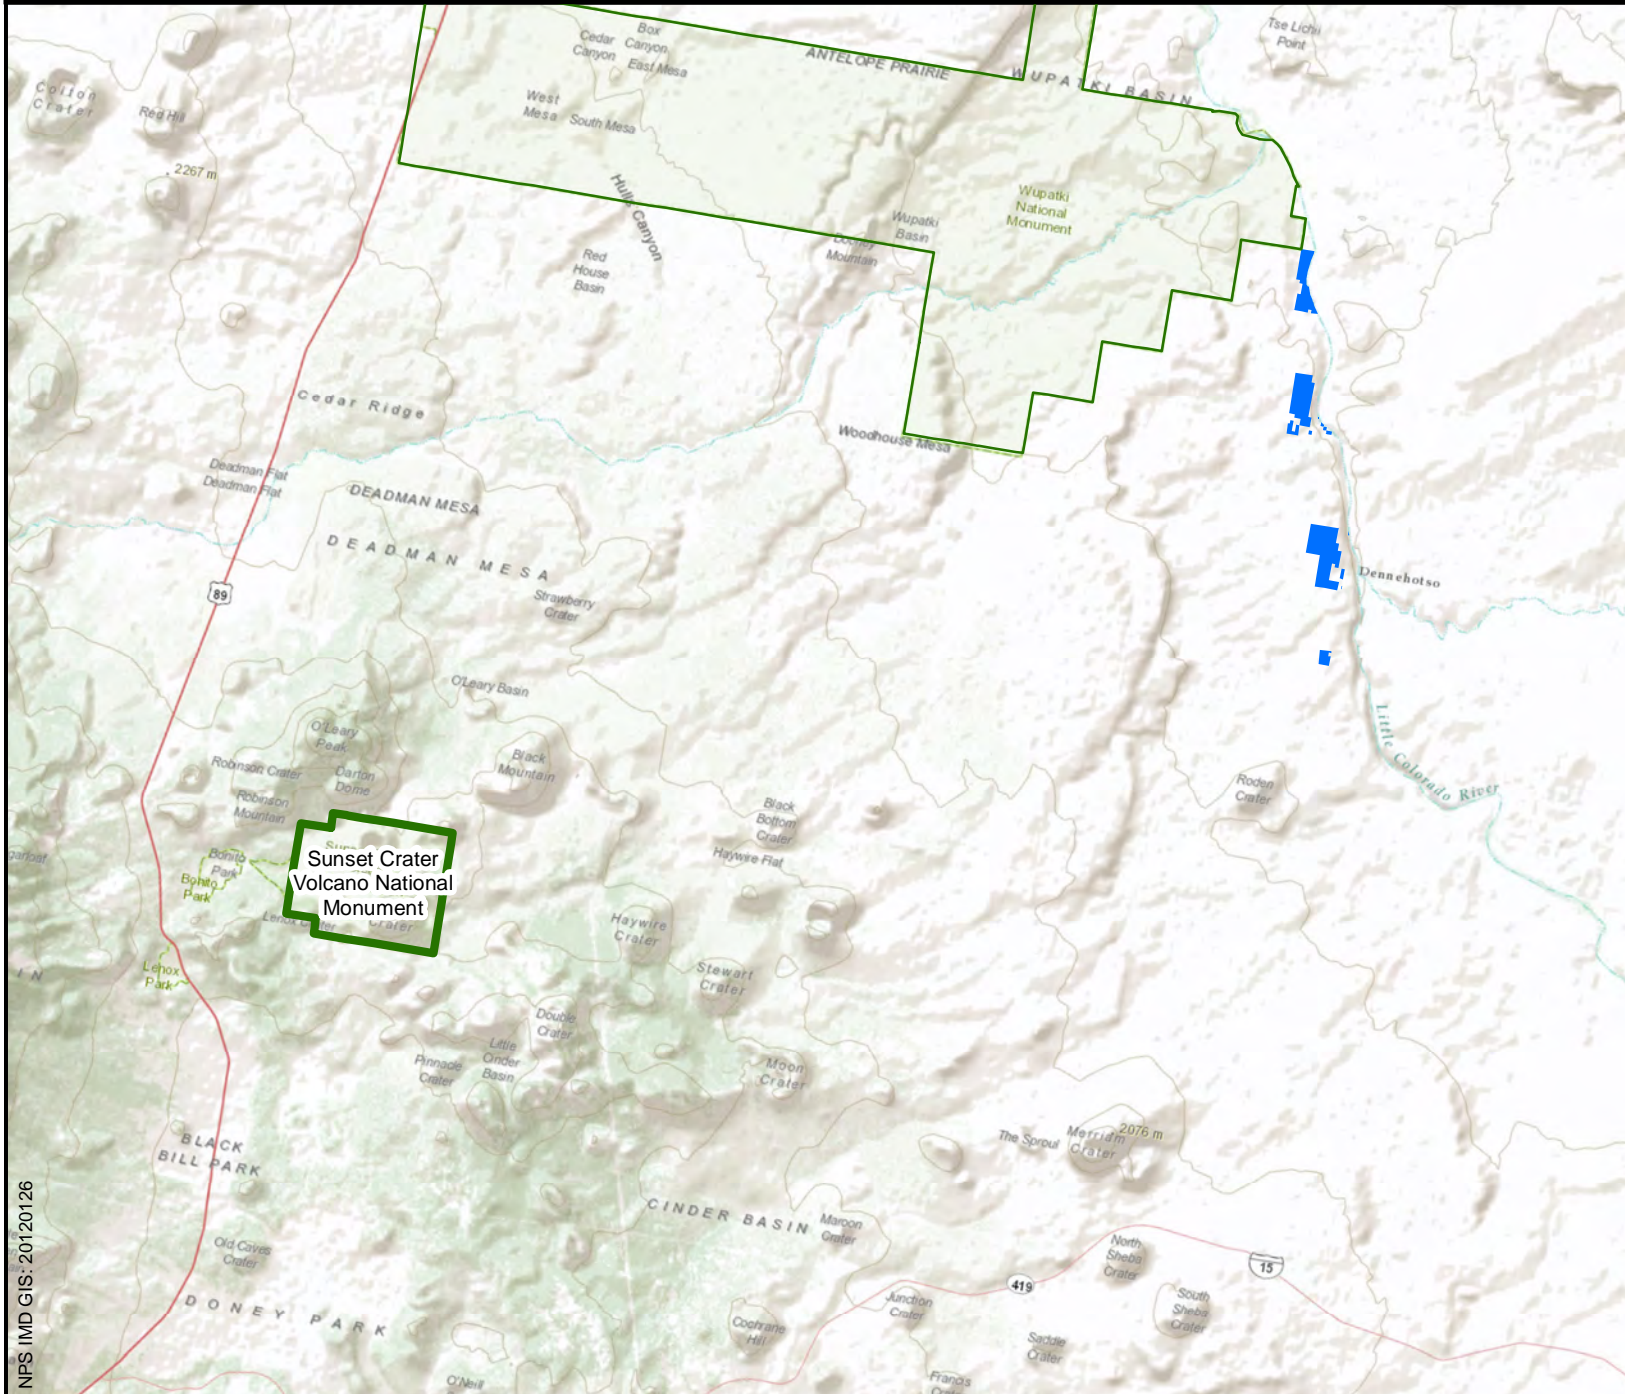

Park Name: Sunset Crater Volcano NM (SUCR)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Protected Area	SUCR_5	Strawberry Crater Wilderness on the Coconino National Forest may constrain options for transmission line routes from utility scale solar developments on variance lands east and northeast of Sunset Crater Volcano.
Roadless Area	SUCR_1 SUCR_7	A large roadless area between Strawberry Crater Wilderness and Sunset Crater Volcano is proposed for management as wilderness under current Coconino National Forest plan (LRMP). This may constrain options for transmission line routes from utility scale solar developments on variance lands east and northeast of Sunset Crater Volcano.
Nighttime Lights	SUCR_10	NPS is concerned about impacts to night skies from developments on the variance lands northeast of Sunset Crater Volcano. Visitor use activities include night star gazing and night sky programs and the lands in those directions are very dark with few light sources evident. The park requests that variance lands northeast of the park be excluded from utility scale solar developments within 15 miles of the park’s boundary
Viewshed	SUCR_11	The park is concerned about potential visual quality impacts from developments outside its boundary. Additional concerns for the viewshed resource are tie-in transmission lines associated with facilities on the variance lands east and northeast of Sunset Crater Volcano. All viable routes would likely cross the Sunset Crater Volcano – Wupatki Scenic Loop Road (proposed designation as a scenic byway).

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

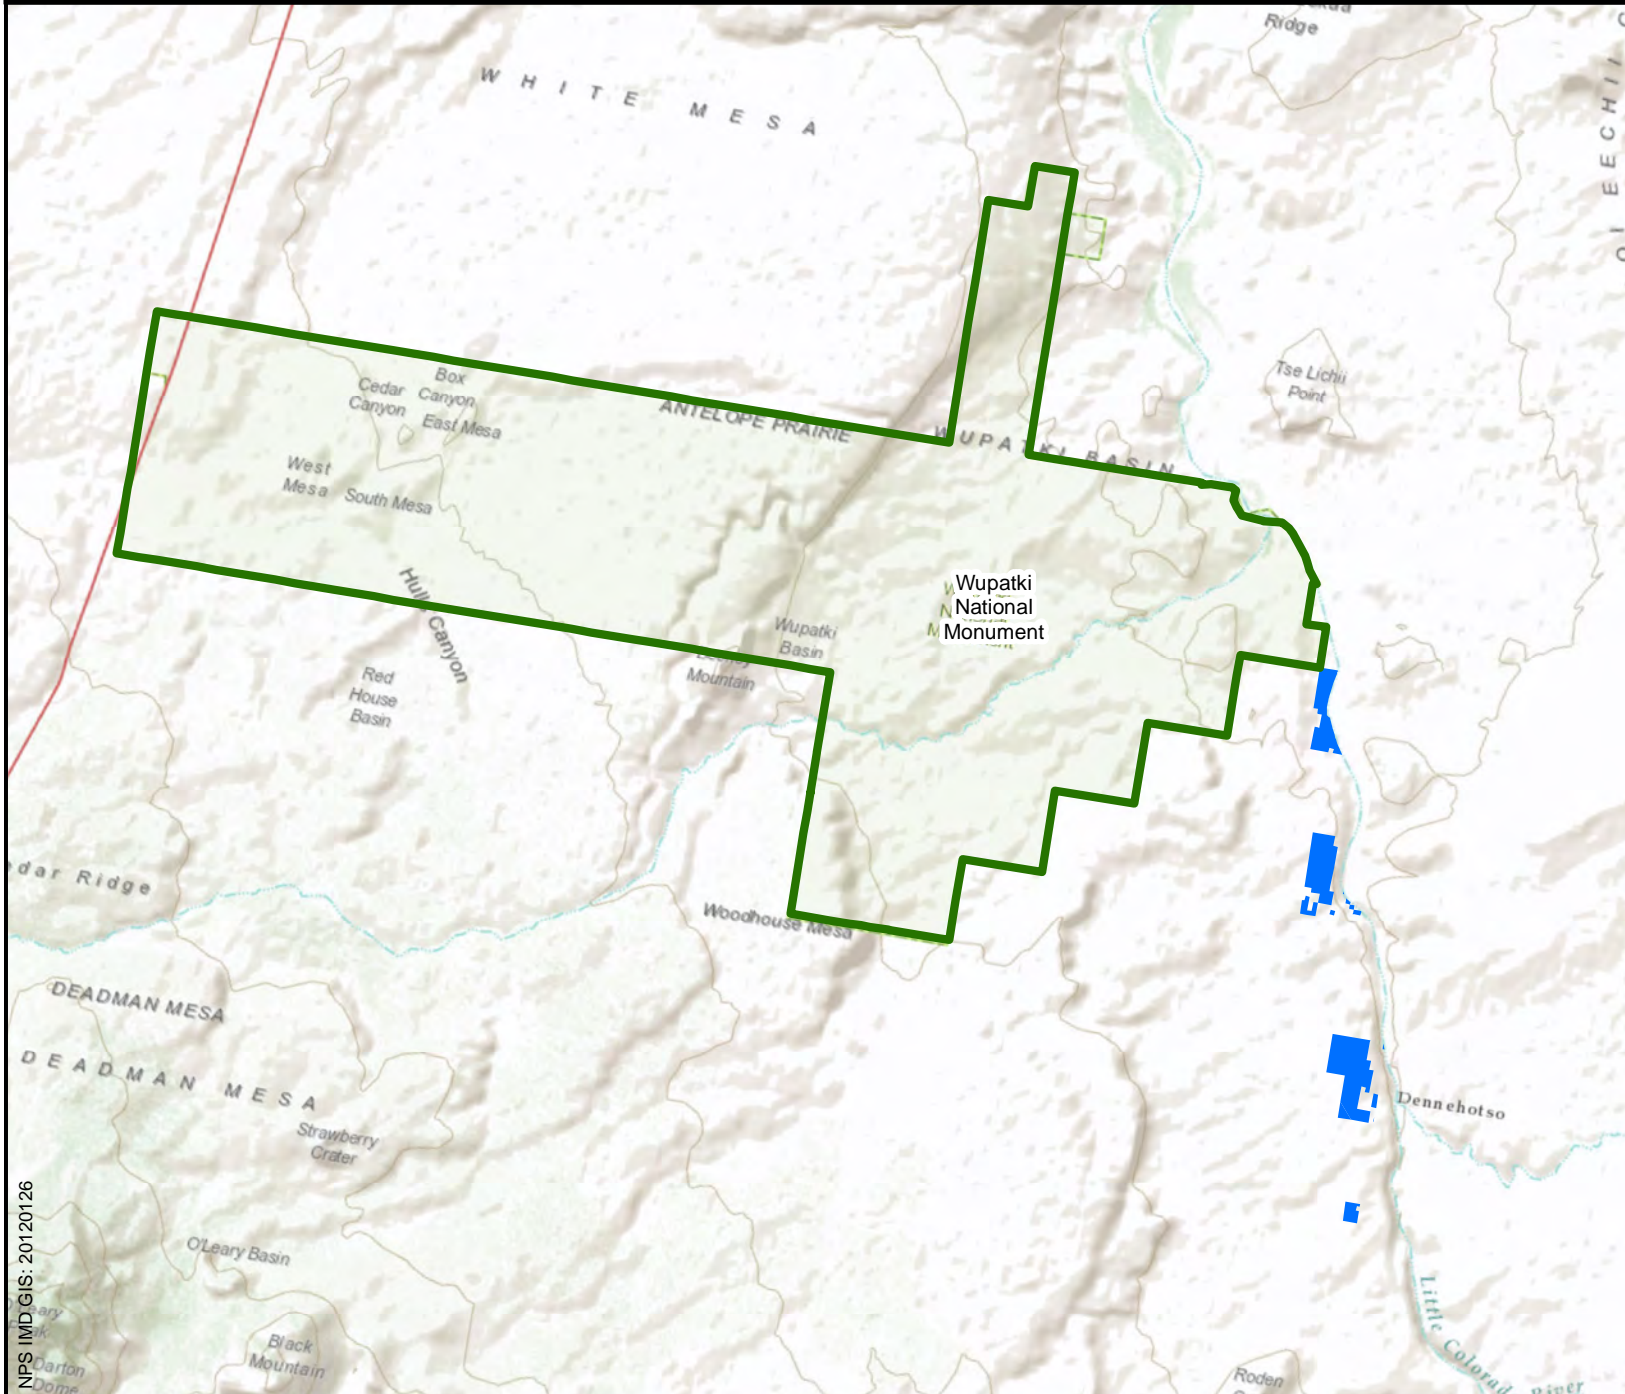

Park Name: Wupatki NM (WUPA)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	WUPA_1	Variance lands lie north and southeast of the park on wind erodibility group 1 and 2 soils. During construction and operation of the utility scale solar facilities there could be additional dust in the air that could impact the visibility and air quality for visitor use areas. The parks requests that these variance lands be excluded to prevent long term impacts from wind deposited soils and particles from the developments.
Wetlands		No concern, however, tracts of land southeast of the monument are likely within Little Colorado River floodplain.
Protected Areas	WUPA_5	Strawberry Crater Wilderness on the Coconino National Forest may constrain options for transmission line routes from tracts southeast of Wupatki.
Roadless Areas	WUPA_7	A large, roadless area between Strawberry Crater Wilderness and Wupatki is proposed for management as wilderness under current Coconino National Forest plan (LRMP) – and may constrain options for transmission line routes from the tracts southeast of Wupatki.
Naturalness Index	WUPA_8	Potential improvement of an access route, power transmission lines, and increased traffic to any solar facility on the variance lands southeast of Wupatki may fragment wildlife habitat for sensitive species including, but not limited to pronghorn, golden eagles, prairie dogs, in an area that already has high natural value for the species.
Landscape Permeability	WUPA_9	Potential improvement of an access route, power transmission lines, and increased traffic to any solar facility on the variance lands southeast of Wupatki may fragment wildlife habitat for sensitive species including, but not limited to pronghorn, golden eagles, prairie dogs, in an area that already has high natural value for the species.
Nighttime Lights	WUPA_10	The park is concerned about impacts to night-time skies from development of utility scale solar facilities on variance lands southeast of Wupatki. Visitor use activities include night star gazing and night sky programs. Even with suggested mitigation the impacts could be substantial. The park requests the exclusion of the variance lands southeast of the park.
Viewshed	WUPA_11	The park is concerned about potential visual quality impacts from tie-in transmission lines associated with facilities on the variance lands southeast of Wupatki. All viable routes would likely cross the Sunset Crater Volcano – Wupatki Scenic Loop Road (proposed designation as a scenic byway).

2. CALIFORNIA PARK UNITS ANALYSES & MAPS**

Note: Discussion of Death Valley NP is provided in Section 4., Nevada Park Units.

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Joshua Tree NP (JOTR)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	JOTR_1	<p>A series of north-south mountain ranges and the open winds of the desert provide for the maintenance of large-scale corridors of habitat upon which certain species rely. Within and to the south of the park, the ranges shift to an east-west orientation. Winds and the habitats created by the shifting sands provide integral components to the ecosystems of the plants and animals using these desert communities. These systems are reflected on all sides of and within the park. The limited current interruptions to these systems include only extensive development to the south and southwest of the park, and higher and steeper mountains.</p> <p>Regarding air quality, dust is the number one source of PM-10 (Particulate Matter 10 microns or smaller) air pollution in the Mojave Desert. Joshua Tree is a Class I air quality airshed which is afforded the highest protection under the Clean Air Act. Construction and post-construction activities, service road maintenance and use, loss of vegetation, and disturbance of soil crusts caused by development in the desert cause wind erodibility Classes 1 and 2 soils to produce significant quantities of fugitive dust, impacting air quality and visibility in the park and surrounding areas. Soils with high wind erosion potential exist around much of JOTR's boundary. The park identifies all variance area lands within 25 miles that have Wind Erodibility Class 1 or 2 soils and a high naturalness index, as areas of potential conflict to NP resource values.</p>
Wetlands and Upstream Watersheds	JOTR_3 JOTR_4	<p>In an environment which is severely water limited, the availability of springs, palm oases, and wetlands becomes critical to those species relying on these sites for water. Habitat connectivity and access by wildlife to these areas should be left open. The sites themselves can house a rare assemblage of species uniquely adapted to the harsh desert environment. The park identified variance areas within ½ mile of wetlands and upstream watersheds that have a high naturalness index, within the 25 mile area of analysis around the park, as areas of potential NP resource conflicts.</p>
Critical Habitat	JOTR_6	<p>Maintaining habitat and the wildlife links between natural areas is an important aspect for maintaining the viability of populations, including desert tortoise in parks. Existing wildlife linkages adjacent to and within 25miles of JOTR identified by the USFWS should be excluded from development.</p>
Roadless Areas, Naturalness	JOTR_7 JOTR_8 JOTR_9	<p>The proposed western portion of the Riverside East SEZ would fragment some of the currently roadless, high naturalness and moderate landscape permeability areas, which are important areas for habitat along the base of the Palen Mountains. The park requests exclusion of Riverside East</p>

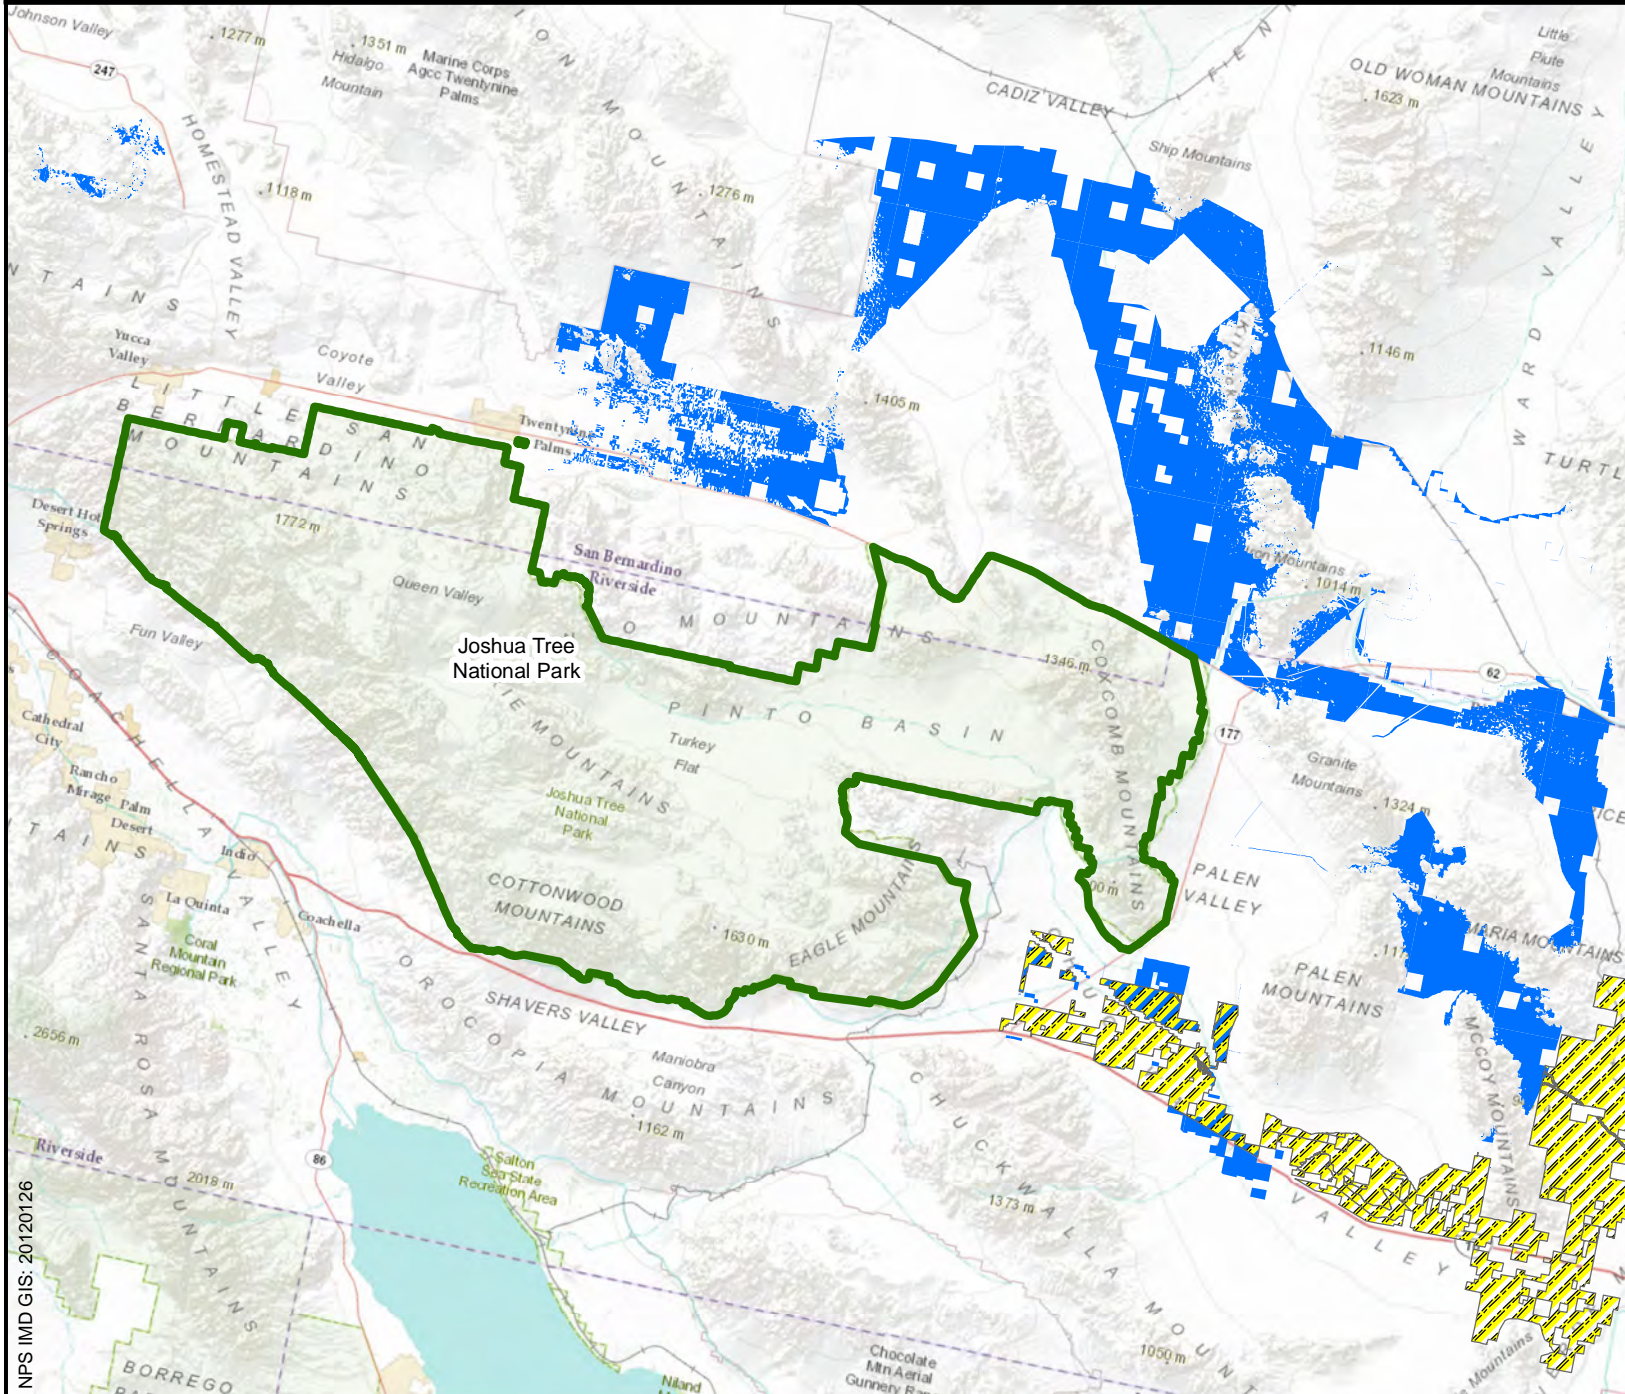

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

and Landscape Permeability		SEZ lands west of Palen Lake as defined in comments to BLM on August 29, 2011.
Nighttime Lights	JOTR_10	The extraordinarily dark skies near the park are a value which draws many park visitors. From the 2010 Joshua Tree National Park Visitor Study, 65% of the park visitors identified “Dark, starry night skies” as an important resource to protect. A Nighttime lights map created by satellite images reveals how special and dark skies currently are, with lighter areas specifically identified as the communities and towns bordering the park to the west and southeast. These are noticeable enclosed patches on the map, indicating the special value of the region otherwise. The park identifies currently “dark” variance lands within the 25 mile area of analysis around the park which are also roadless and have a high naturalness index as areas of potential NP resource conflicts. NPS is concerned about persistent and intermittent nighttime light resulting from construction, operation and additional secondary light pollution related to large solar facilities.
Viewsheds	JOTR_11	The visual resources all around, but especially in the northern and eastern portions of Joshua Tree National Park, reflect the request by the park visitors to protect undisturbed open vistas. In the 2010 Joshua Tree National Park Visitor Study, 90% of the park visitors surveyed identified “Views without Development” as the leading park resource to be protected. Protecting these largely undeveloped views to the north, east, and southeast are critical to preserving the NPS visitor values. As identified in the current proposal, the Riverside East SEZ could be visible at locations within the eastern third of JOTR. The full includes lands immediately adjacent and/or within the viewshed to the park that could be open to development. These lands should be excluded from development. The park requests all areas with line of sight visible points within the park, which have a high naturalness index, are roadless, and have dark night skies, be excluded from development.
		<p style="text-align: center;">Additional Background Comments</p> <p>Protecting largely undeveloped views to the north, east, and southeast, to the next mountain ranges, is essential to preserving the NPS visitor values, and continuing to protect the park resources within the park from encroaching outside influences. Park resources at risk include viewshed, wilderness, night skies, soundscape, connected habitats, sand transport processes, water quantities, and visitor experiences. With the current configuration, the proposed Riverside East SEZ is visible at locations within the eastern one-third of the park as far as 14 miles away. The proposed Solar Energy Program also includes variance lands located immediately next to the park, and within the viewshed to the park that would be available for development.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Mojave National Preserve (MOJA) Note: Analysis of PEIS lands in California and Nevada is included in this discussion.

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	MOJA_1	<p>Dust is the number one source of PM-10 (Particulate Matter 10 microns or smaller) air pollution in the Mojave Desert. Soils with high wind erosion potential exist around most of the Preserve boundary. Construction and post-construction activities, service road maintenance and use, loss of vegetation, and disturbance of soil crusts caused by development in the desert cause wind erodibility Classes 1 and 2 soils to produce significant quantities of fugitive dust, impacting air quality and visibility in the preserve and surrounding areas. In order to minimize air quality impacts including visibility impairment, the park identifies all variance area lands within 25 miles that have Wind Erodibility Class 1 or 2 soils and a high naturalness index, as areas of potential conflict to park resource values.</p> <p style="text-align: center;">Additional Soil Erosion Comments</p> <p>The park proposes excluding variance areas within ½ mile of water erosion sensitive soils within the 25 mile area of analysis to avoid introduction of sediment and contaminants into sensitive wetlands from runoff during construction and operations.</p>
Wetlands and Upstream Watersheds	MOJA_3 MOJA_4	<p>In an environment which is severely water limited, the availability of springs, palm oases, and wetlands becomes critical to those species relying on these sites for water. Habitat connectivity and access by wildlife to these areas should be protected. The preserve proposes excluding variance areas within ½ mile of wetlands within the 25 mile area of analysis to allow access by wildlife and avoid introduction of sediment and contaminants from runoff during construction and operations.</p>
Critical Habitat	MOJA_6	<p>Due to the high density of desert tortoise living and breeding in the Ivanpah Valley, the park requests the undeveloped portions of the Valley be excluded from future solar development. The USGS has identified the Ivanpah valley as high quality desert tortoise habitat through their GIS model.</p>
Roadless Areas, Naturalness Index and Landscape	MOJA_7 MOJA_8 MOJA_9	<p>Note most of the variance lands surrounding the park are rated as having a high Naturalness Index and many are within roadless areas and/or have moderate landscape permeability, as such these are high quality areas the park would prefer to see preserved intact. Preservation of these intact landscapes and their inherent scenic values is a primary management goal of the preserve since these areas are critical to sustaining biological species diversity and genetic diversity of</p>

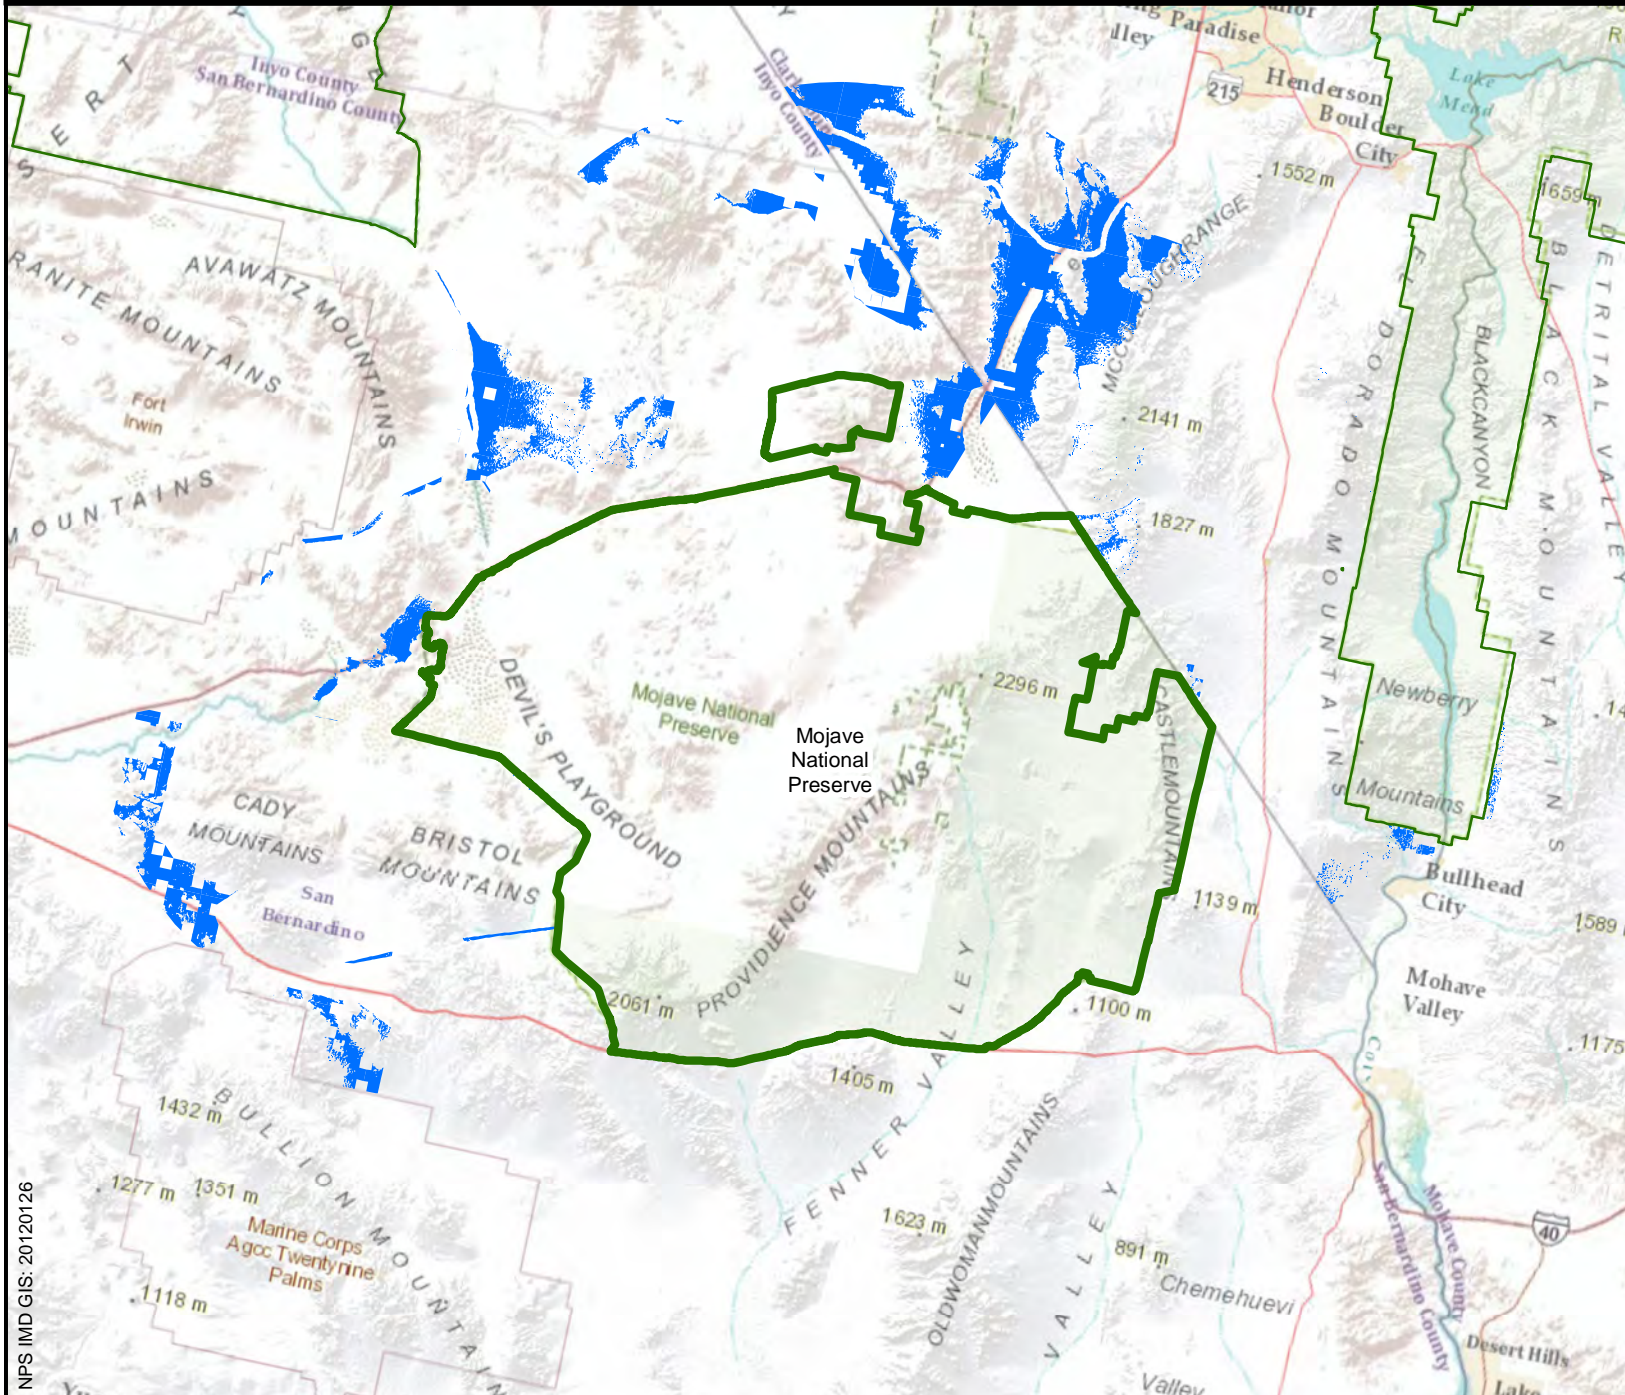

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Permeability		resident park wildlife populations. In addition non-native and invasive weeds are commonly associated with disturbed areas and are often distributed along road corridors. To protect biological diversity and avoid invasive and non-native weeds the Preserve identifies areas within 25 miles of the park with a high naturalness, roadless, and dark night sky values as areas with high potential for resource conflicts.
Nighttime Lights	MOJA_10	Light pollution threatens one of the main reasons for the creation of Mojave National Preserve as stated in the enabling legislation, and therefore is a major concern. There is increasing research showing dark sky importance to ecosystem function, and demonstrating the multiple adverse impacts of light pollution to community ecology (Longcore and Rich, 2004). Animals can experience increased orientation or disorientation from additional illumination and are attracted to or repulsed by glare, which affects foraging, reproduction, communication, and other critical behaviors. In addition visitors come to the preserve to experience dark night skies. The Preserve identifies variance lands within the 25 mile area of analysis around the park which have dark night skies, are roadless and have a high naturalness index as areas of potential park resource conflicts. The park’s goal is to protect the dark night sky resource from impacts of nighttime light resulting from construction, operation and additional light pollution cumulative impacts related to large solar generating facilities.
Viewsheds	MOJA_11	The scenic vistas associated with Mojave National Preserve are considered unique and are so identified in the California Desert Protection Act. Key Observation Points (KOP’s) have been identified and modeled for line of sight impacts. The park requests all areas with line of sight visible points within the preserve be excluded from development (as depicted in the NRSS viewshed analysis map).
		<p style="text-align: center;">Additional Background Comments</p> <p>Significant impacts to birds, including raptors and song birds, and bats may occur as projects are developed in SEZs and variance areas. Mitigation will be necessary and may include alternative design to transmission towers in a manner that limits perching. Significant direct and indirect loss of plant and wildlife habitat from towers, roads, buried lines and ancillary facilities can be expected. A complete ecological inventory is needed to identify all species impacts during all seasons. This should include but is not limited to locally unique species, rare natural communities, wetlands, threatened and endangered species and state sensitive species or species of Special Concern. To fully understand and analyze project impacts, one needs to have a complete understanding of the resources that would be impacted.</p>

Solar Energy Development in Six Southwestern States**

**NPS ANALYSIS OF SOLAR ENERGY PROGRAM LANDS:
3. COLORADO PARK UNITS ANALYSES & MAPS**

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Great Sand Dunes NP&Preserve (GRSA)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	GRSA_1	<p>V lands North, West, and South of the park (approximately 10 miles) lie on soils with a high wind erosion potential (primarily lands on group 1, but lands to the west on group 2), and would be potentially a constant source of windblown particles reaching the park during construction and operation of a utility scale solar facility. The park is a Class 1 area under the Clean Air Act. The park is susceptible to the harmful effects of wind derived fine particles. The addition of these depositions upon the park can impact natural resources such as surface waters and vegetation, and the park's scenic resources such as visibility. Current visibility effects from current conditions at Great Sand Dunes NP & Pres include: Reduced visibility sometimes due to human-caused haze and fine particles of air pollution; reduction of the average natural visual range from about 170 miles (without the effects of pollution) to about 100 miles because of pollution at the park; reduction of the visual range to below 65 miles on high pollution days. Utility scale solar developments on variance lands in proximity to the park has a high potential of affecting further air quality impacts</p> <p>The park requests that variance lands north, west, and south of the park’s boundary be excluded from the potential development to prevent potential resource damage.</p> <p>Reference: <i>Air Quality in National Parks</i> <i>2008 Annual Performance & Progress Report</i> <i>Natural Resource Report NPS/NRPC/ARD/NRR—2009/151</i></p>
Wetlands	GRSA_3	<p>NPS requests that the variance lands west and south of the park be excluded based upon the significant and extensive wetlands in that area Wetlands in the San Luis Valley are present in large connected swaths within and external to the park. Wetland functions and wildlife may potentially be impacted within the park if these variance lands are developed by the utility scale solar developments.</p>
Protected Areas	GRSA_5	<p>NPS requests that the variance lands west and south (approximately out to 8 miles) of the park be excluded based upon the proximity to TNC and 2 wilderness area lands managed as “protected lands” (in combination). These TNC and wilderness lands in combination with park lands constitute an area that could be significantly affected by a development within the variance lands.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

<p>Nighttime Lights</p>	<p>GRSA_10</p>	<p>NPS requests that the BLM variance lands north (approximately 5 - 20 miles) of the park be excluded based upon the current night sky resources in those lands and significant areas of the San Luis Valley</p> <p style="text-align: center;">Additional Night Sky Comments</p> <p>Night sky viewing from the park could be impacted because the SEZ lies in a direction that no discernible light sources are normally seen in the field of view. The proposed changes to the Fourmile East SEZ as referenced on page C-117 would likely also reduce night sky impacts. Potential night sky impacts could be reduced significantly to park visitors by appropriately designed site lighting for facility operations and security. The NPS requests that BLM work with NPS on further specific mitigation requirements to reduce these impacts from development in this SEZ.</p>
<p>Viewshed</p>	<p>GRSA_11</p>	<p>NPS requests that the BLM variance lands north, west and south of the park (and out to approximately 20 miles of the park’s boundary) be excluded based upon the potentially significant visual impacts to visitors experiencing the park, Both from the park dune field and along the main access road to the park. Key scenic vistas are identified in the <i>GRSA General Management Plan</i> (Pg. 27) in these areas.</p> <p style="text-align: center;">Additional Visual Resource Comments</p> <p>The BLM (San Luis Valley Field Office) has recommended that additional lands be excluded in the area between HWY 17, HWY 150, HWY 160 and the park's southern boundary. The remaining PEIS lands lie within the Fourmile East SEZ. The SEZ has potential to impact the park from visibility impacts to visitors on and around the park dunes. The BLM's recommendation to propose a restriction to photovoltaic technology of less than 10 ft., or technologies with comparable or lower heights in the SEZ should reduce the profile of development against the valley floor or horizon sky. NPS recognizes and appreciates the BLM’s attempt to reduce visibility impacts to visitors on the park dunes and approaching the park by car or bike. The recommended shift in SEZ location and the use of PV is a small but meaningful effort.</p>
		<p style="text-align: center;">Additional Background Comments</p> <p>The PEIS polygon directly west of GRSA is within Baca NWR. It may have been BLM land prior to the GRSA expansion and creation of Baca NWR. If so, The park believes that it should now be labeled as USFWS managed land.</p> <p>The PEIS polygons immediately south of GRSA would be visible from the dunes and also are</p>

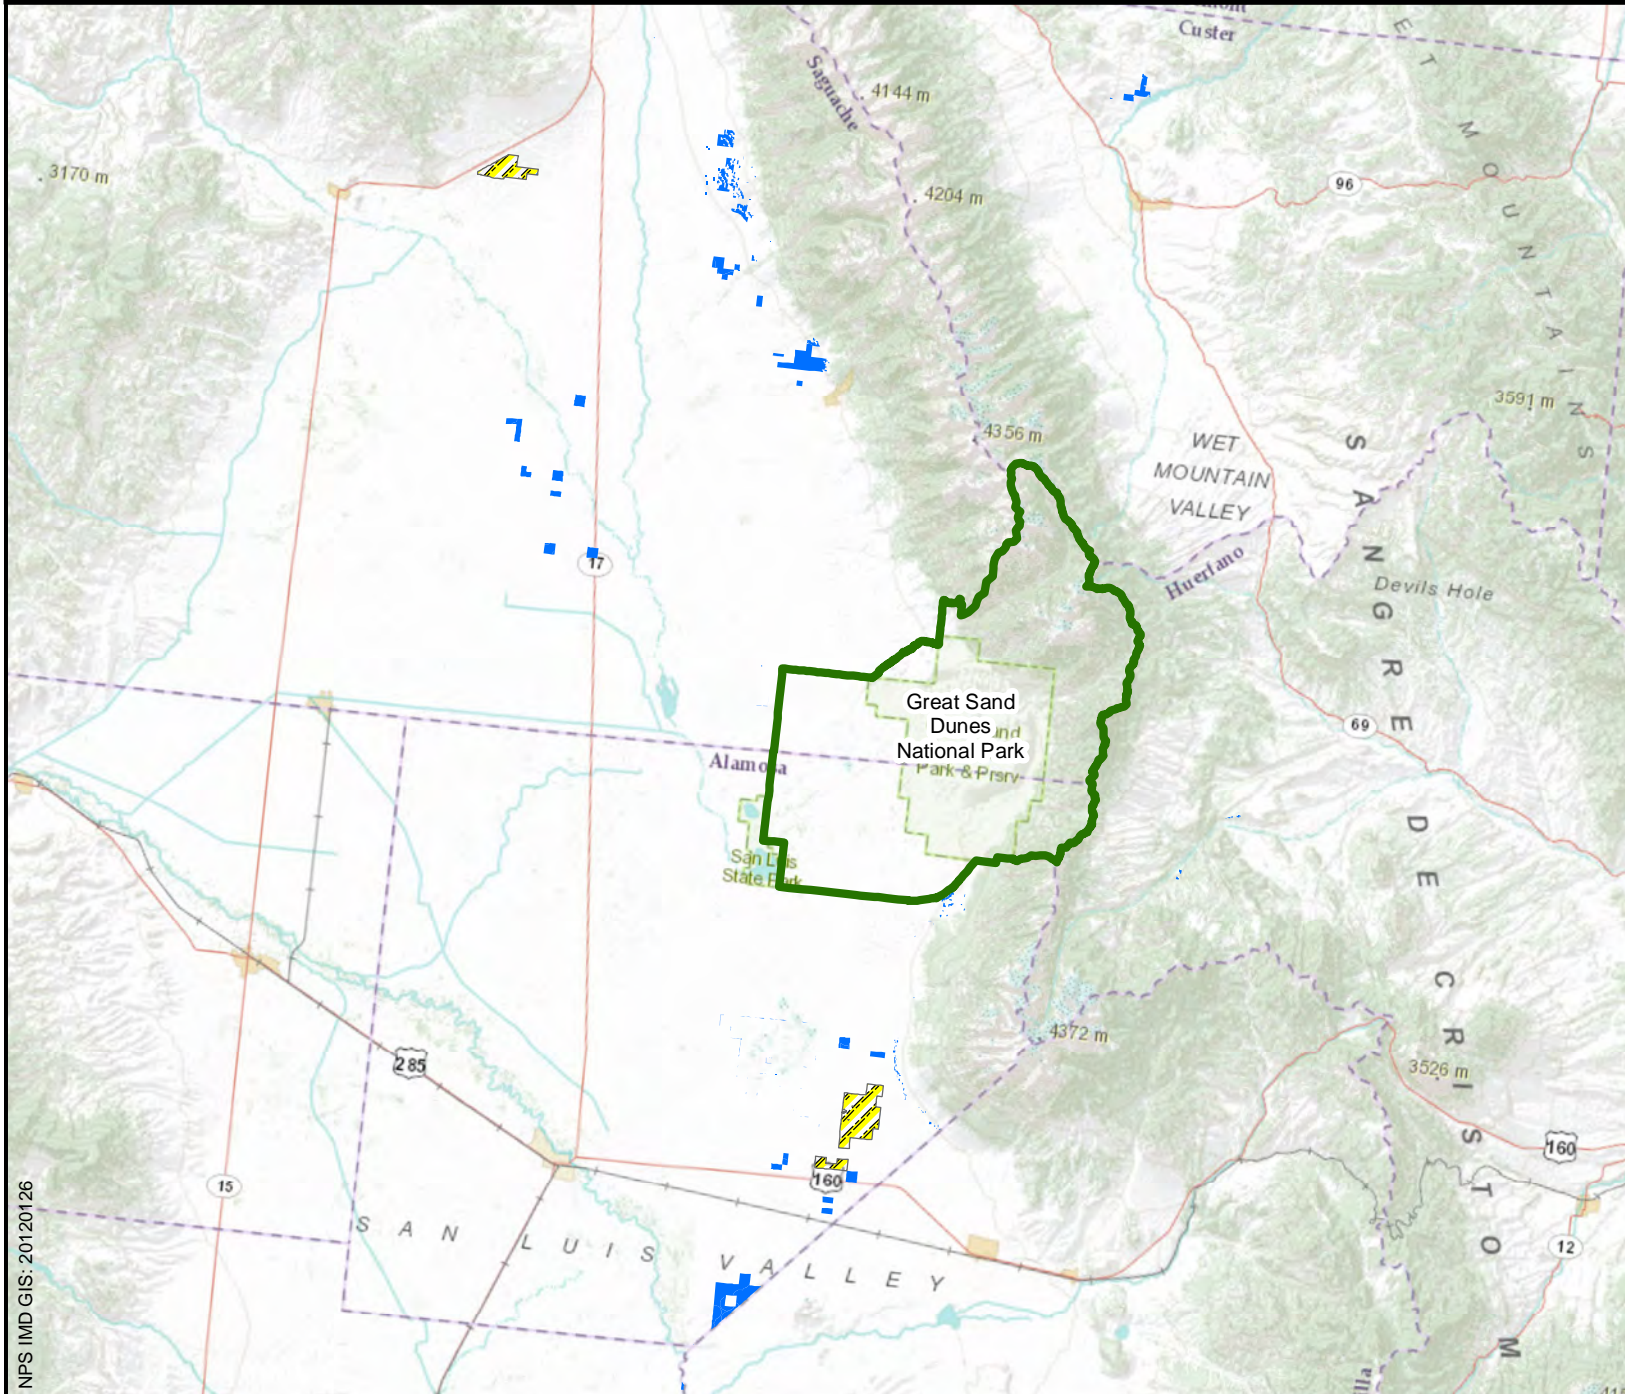

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		tightly sandwiched between other protected lands of the Nature Conservancy and others. GRSA requests that they be excluded.

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Mesa Verde NP (MEVE)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	MEVE_1	<p>Soils within the area of analysis (AOA) surrounding the park are represented by a small amount of Group 1 wind erodibility soils. Variance lands on these particular soils group are located generally southeast of the park and 2-25 miles from the park’s boundary. Although the current soils references do not identify soils around Mesa Verde as vulnerable to wind erosion, park staff observe that the Mancos Shale-derived soils are quite capable of producing wind-blown dust when they are disturbed (as in a utility-scale solar development). The park is very concerned about the fugitive dust that could be produced by such a facility in proximity to Mesa Verde National Park. The park is a Class 1 area under the Clean Air Act and NPS has the responsibility to affirmatively protect the air quality from degrading. During solar development site clearing on these Mancos Shale-derived soils, the park would expect a considerable amount of dust to be released into the air. After construction, the high winds the region (including the park) experiences in southwest Colorado, especially during the spring season.</p> <p style="text-align: center;">Additional Air Quality Comments</p> <p>The latest 10 year air quality trend report at Mesa Verde NP has the visibility rated "moderate" in concern, but stable. This air quality condition report would caution developers of utility scale solar developments in the general area to be aware of the need for design and mitigation practices that lessen dust or particulate emissions. <i>Air Quality in National Parks 2008 Annual Performance & Progress Report</i> <i>Natural Resource Report NPS/NRPC/ARD/NRR—2009/151</i></p>
Roadless Areas	MEVE_7	<p>Many of the areas north and east of the park with designated variance lands and within 8 miles have Roadless Areas are considered valuable to the park. Their proximity to the park and association with Protected Areas and wildlife resources (see references below) make them inappropriate for utility scale solar developments. The park requests those lands in Roadless areas within 8 miles of the park’s boundary be excluded.</p>
Landscape Permeability	MEVE_9	<p>Landscape Permeability: Most of the area north of Mesa Verde is designated critical mule deer winter range by the state division of wildlife and parks. The state also identified a mule deer migration corridor within this area and Mesa Verde further identified the “Summit Ridge” wildlife corridor. Migratory</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>mammals such as mule deer, elk, black bear, bobcat, mountain lion, and others depend on these landscapes remaining intact.</p> <p>Wildlife Corridors (sensitive wildlife habitat and migration corridors): BLM variance lands north of Mesa Verde are located in areas already identified as important terrestrial wildlife habitat which includes critical winter range and seasonal movement corridors for ungulates. One of these corridors was identified in the Colorado Natural Diversity Information Source, Mule Deer Migration Corridors, 2011, Colorado Division of Wildlife, Fort Collins, Colorado. 2011. The Division of Wildlife has a web site that allows the user to generate maps through an interface at http://ndis.nrel.colostate.edu/ftp/index.html and the "critical" or "severe winter" range mule deer concentration area also is referenced in the Montelores Committee Habitat Partnership Program Habitat Management Plan (2010-2014) located at http://wildlife.state.co.us/SiteCollectionDocuments/DOW/Education/pdf/HPP/MonteloresPlan2110_2014.pdf. The other corridor has been recognized for many years by the park's natural resource management staff and was discussed in "Environmental Assessment for the Mesa Verde National Park Cultural Center" (April 2002), but its full extent has not been formally defined. We refer to this strip of wooded country with several reservoirs for drinking water as the "summit ridge" corridor as it connects the northern ridgeline of the park with the San Juan National Forest. It is used by mule deer, black bear, mountain lions, and other species. The Montelores plan states that the Mesa Verde area deer herd currently stands at only 57% of its long-term population objective. Adding an industrial facility in this area would not help the local deer herd.</p> <p>The park requests the variance lands west, north, and east within 8 miles of the park's boundary be excluded.</p> <p>References:</p> <ol style="list-style-type: none"> 1. Colorado Natural Diversity Information Source, Mule Deer Migration Corridors, 2011, Colorado Division of Wildlife, Fort Collins, Colorado. 2011 [http://ndis.nrel.colostate.edu/ftp/index.html] 2. --	--	---

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p style="text-align: center;">Additional Wildlife Migration Corridor Comments</p> <p>Weber and East canyons east of the park are Weber Canyon and East Canyon, both representing natural wildlife migration corridors along perennial creeks that link with the Mancos River wildlife corridor in the park and therefore are drawn in exclusion area 3. If these lands to the east are NOT truly BLM lands proposed as variance lands, this comment can be deleted.</p> <p style="text-align: center;">Additional Protected Area Comments</p> <p>Some of the BLM lands south of Highway 160 that adjoin the national park are being considered for possible transfer to Mesa Verde National Park. The Park Superintendent has been discussing this with the local BLM counterpart for several years and they have agreed to continue working towards the land transfer. Construction of a utility scale solar development would preclude them from being moved to the National Park Service.</p> <p>Totten Reservoir State Wildlife Area is located a little west of the core BLM lands northwest of the park entrance. There are other state wildlife areas in this area including Summit Lake State Wildlife Area. It is important to consider State Wildlife areas and private properties in the area that have conservation easements or are under active consideration for such easements. Placement of a large solar facility in close proximity to these properties could render them incapable of achieving their long-term conservation goals. Some of these properties are next to the park.</p> <p>The park requests that BLM determine what other potentially “protected” areas not described in the Protected Area Database, (PAD-US) are northwest of the park’s boundary and consider excluding such lands.</p> <p>Protected Areas Database of the United States (PAD-US) version 1.2: http://www.protectedlands.net/padus/</p>
<p>Nighttime Lights</p>	<p>MEVE_10</p>	<p>Additional night lighting at utility scale solar developments on the variance lands north and east of the park would add to the growing problem of light pollution in the park coming from the Montezuma Valley. Most of the lands described concerns do not currently contribute significantly to local levels of light pollution near the park. Maintaining that condition is advantageous to protecting Mesa Verde National Park’s natural values.</p> <p>As mentioned in the wind erodibility comments, the park is concerned about potential fugitive dust that would be produced by such a facility in proximity to Mesa Verde National Park, a Class 1 area under the Clean Air Act. During site clearing on these Mancos Shale-derived soils, we can</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>expect a considerable amount of dust to be released into the air. After construction, the high winds we periodically experience in southwest Colorado, especially during the spring season, could create significant dust plumes from the cleared ground and unpaved access roads that would blow into and next to the park in the viewshed in plain view of park visitors and potentially affect the visitor’s night sky experience.</p> <p>The park requests the variance lands north and east within 8 miles of the park’s boundary be excluded to protect this resource.</p>
<p>Viewsheds</p>	<p>MEVE_11</p>	<p>Due to their close proximity to Mesa Verde, the proposed BLM variance lands west and north of the park would be readily observable from several key public overlooks along the park’s main access road, from some hiking trails, and from much of the park’s designated Wilderness Areas. The park expects that impacts from reflected sunlight sourced to a utility scale solar development could affect the visitor experience during portions of daylight hours at many of the viewpoints. The NPS viewshed analysis maps clearly show that the BLM parcels under consideration north and west of the park are all within view of established scenic overlooks and some public trails for the visiting public. These same vistas also would be viewed from the designated wilderness areas next to these many overlooks.</p> <p>The park requests the variance lands west and north and within 8 miles of the park’s boundary be excluded to protect this viewshed resource.</p> <p style="text-align: center;">Additional Viewshed Comments</p> <p>Areas north of State Highway 160 Some areas north of the highway are requested to exclusion area because they are very close to the national park or otherwise readily visible from established scenic overlooks for the visiting public, thus impacting the viewshed. Proximity also amplifies impacts to naturalness, dark night skies, and migratory wildlife.</p> <p>Areas south of State Highway 160 All of these areas are recommended for exclusion as they are in very close proximity to the park and readily visible from established scenic overlooks for the visiting public, thus impacting the viewshed. Proximity also amplifies impacts to naturalness, dark night skies, and migratory wildlife. Additionally, some of the BLM lands south of Highway 160 that adjoin the national park are being considered for possible transfer to Mesa Verde National Park. Construction of the solar facility would preclude them from being moved to the National Park Service.</p>

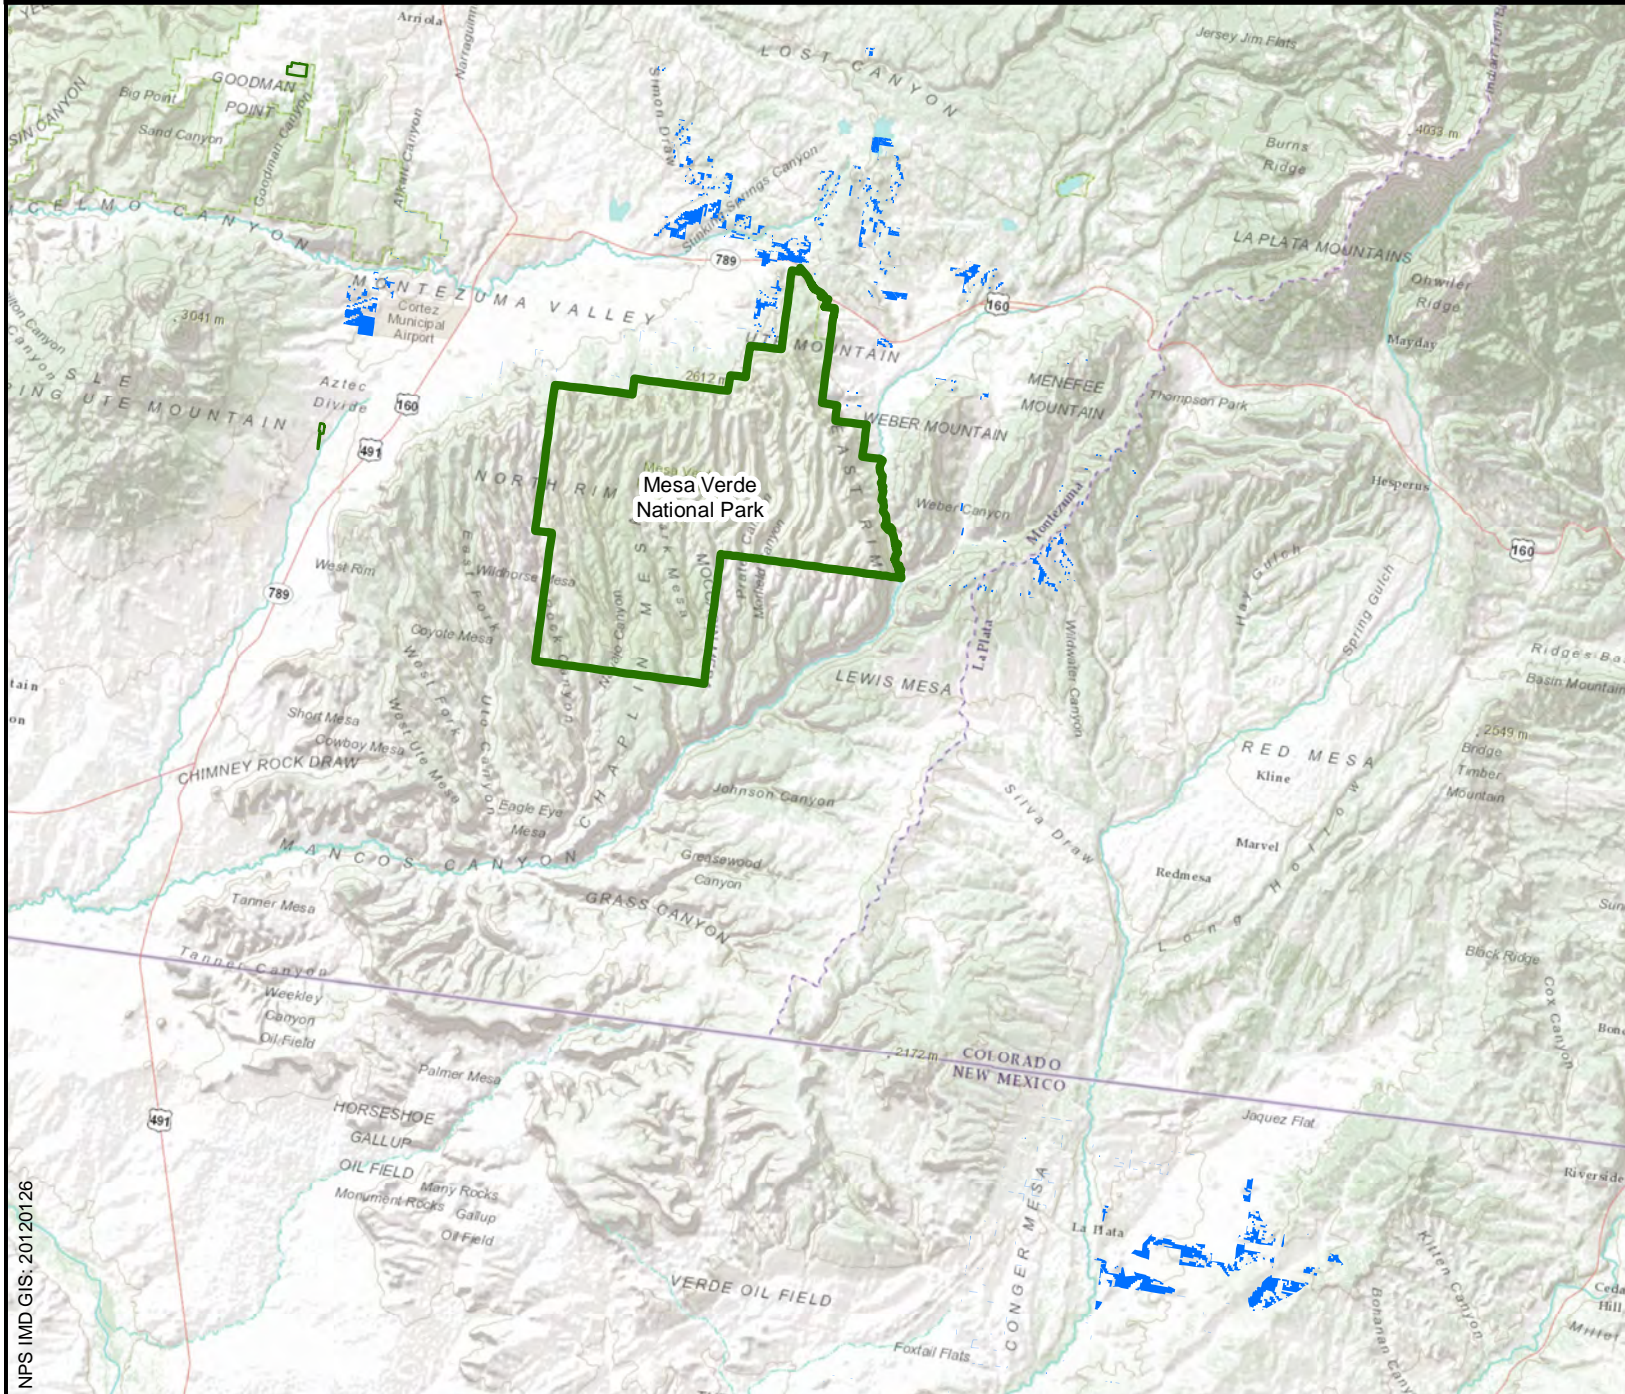

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p style="text-align: center;">Additional Background Comments</p> <p>The western-most site proposed by BLM, located west of the county airport, would not appear to have any direct impacts to wildlife at Mesa Verde. While this site might still be visible from the park's overlooks, its impact would be considerably less. This site also would not be visible from Yucca House National Monument, which is located three miles to the south of this site but is blocked from view by a small ridge called "Aztec Divide." While fugitive dust from this site still could impact Mesa Verde and Yucca House, the greater distance from the park would help mitigate that problem. Based on this initial analysis, the park concludes that variance lands north and east of the park would have long-term adverse effect on Mesa Verde National Park's air quality, viewshed, night skies, and wildlife.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Death Valley NP (DEVA)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	DEVA_1	Dust is the number one source of PM-10 (Particulate Matter 10 microns or smaller) air pollution in the Mojave Desert. Soils with high wind erosion potential exist around most of the Park boundary. The park identifies all variance lands with Wind Erodibility Class 1 and 2 soils and a high naturalness index, within 25 miles of the park as areas of potential conflict to National Park (NP) resource values.
Naturalness Index	DEVA_3 DEVA_4 DEVA_6 DEVA_7 DEVA_8 DEVA_9	Note that almost all of the variance lands surrounding the park are rated as having a high Naturalness Index and as such are quality areas the park would prefer to see preserved intact. Preservation of these intact landscapes and their inherent scenic and ecological values is a primary management goal of the park. Naturalness is an important contributing element in maintaining landscape permeability, which is critical to sustaining biological species diversity and genetic diversity of resident park wildlife populations.
Viewshed	DEVA_11	<p>Viewshed. For the attached geospatial analysis, the park identified key observation points for analysis of the visual impacts of proposed solar development to the 3.4 million protected acres of the park. The methodology for selection was to include sites that had a range of levels of established visitation and provided outstanding opportunities for enjoying the scenic values recognized and protected in the park’s enabling legislation (California Desert Protection Act of 1994, 16 U.S.C. §§ 410aaa through 410aaa-83, October 31, 1994). Applying line of sight analysis from key observation points, the park has determined that potential adverse impacts to the park’s viewshed and scenic values from utility-scale energy development immediately adjacent to the park are likely. The park requests that all areas with a direct line of sight from inside DEVA that are also roadless, have a high naturalness index and nighttime darkness be excluded from solar development.</p> <p>Nighttime Lights. The NPS manages dark night skies as a natural resource. In addition to providing opportunities for visitor enjoyment, there is increasing research showing dark sky importance to ecosystem function, and demonstrating the multiple adverse impacts of light pollution to community ecology (Longcore and Rich, 2004). Animals can experience increased orientation or disorientation from additional illumination and are attracted to or repulsed by glare, which affects foraging, reproduction, communication, and other critical behaviors. Examples specific to desert ecology of the Death Valley region are numerous. Coyotes (<i>Canis latrans</i>)</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>group howl and group yip-howl more during the new moon, when it is darkest. Communication is necessary either to reduce trespassing from other packs, or to assemble packs to hunt prey during dark conditions (Bender <i>et al.</i>, 1996). Depending on intensity of light pollution, ambient illumination could alter or eliminate this pattern in affected areas (Longcore and Rich, 2004). Desert rodents reduce their foraging activity when exposed to ambient light (Kotler, 1984). A study of predation by bats, birds, skunks, toads, and spiders on moths found behavior patterns significantly altered by artificial lighting (Frank, 1988). The cumulative effects of behavioral changes induced by artificial night lighting on competition and predation have the potential to disrupt key ecosystem functions (Longcore and Rich, 2004). Longcore and Rich predict of light pollution: “the most noticeable effects will occur in those areas where lights are close to natural habitats.” Siting multiple facilities requiring night lighting on or near the boundary of Death Valley National Park would reasonably fall into this category of development that the researchers predict will produce the most noticeable effects to ecosystem function.</p> <p>Areas within 25 miles of the park with a high naturalness index that are roadless and have dark night skies have a high potential for park resource conflicts. The NPS requests that any solar development permitted within 50 miles of DEVA be required to install only down-shielded, dark night sky appropriate lighting approved by NPS and the International Dark Sky Association.</p> <p>References: Longcore T, and Rich C. 2004. 		<p style="text-align: center;">Additional Background Comments</p> <p>Death Valley National Park was recognized in its enabling legislation (California Desert Protection Act of 1994, 16 U.S.C. §§ 410aaa through 410aaa-83, October 31, 1994) as being</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>nationally significant for a wide array of values, including “scenic values.” The park contains many iconic desert and mountain observation points whose viewshed is a critical component of the park’s legislated protection. Solar energy development contemplated in the near the park should recognize and appropriately address these nationally significant resource values.</p> <p>Devils Hole was added to Death Valley National Park in 1952 by Presidential Proclamation 2961, for the purpose of protecting the Devils Hole pupfish and the water resources connected to the unit, stating in part “...the pool is of such outstanding scientific importance that it should be given special protection.” The National Park Service’s reserved water right at Devils Hole established by this proclamation has been upheld by decision of the Supreme Court (Cappaert v. United States, 426 U.S. 128, 1976).</p> <p>In the event the Gold Point SEZ is developed, the NPS suggests that the military’s request to limit structures in the SEZ to 50 feet (15 meters) would provide some mitigation for viewshed impacts near the northern portion of Death Valley National Park.</p>

NPS IMD GIS: 20120126

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Great Basin NP (GRBA)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	GRBA_1	<p>The park recommends excluding all SEIS lands mapped coincidentally with Wind Erodibility Classes 1 and 2 that are southwest of the black line identified on GRBA_Soils_SEIS.pdf attached. Construction and post-construction activities, service road maintenance and use, loss of vegetation, and disturbance of soil crusts caused by development in the desert cause wind erodibility Classes 1 and 2 soils to produce significant quantities of fugitive dust, impacting air quality and visibility in the park and surrounding areas.</p> <p>Annual windrose data from the park’s highest and most representative remote automated weather station indicates the strongest and most prevalent winds are from the south to SSE, with the next greatest wind speeds and vectors from the NW to NNW (DuBois et al, 2006, Fig. 8-21). Fig. 8-23 also from that report indicates that a third set of vectors from the southwest occur occasionally in the fall. Therefore it is highly likely that fugitive dust from solar generating facilities would be blown into the park diminishing air quality, scenic resources, and night sky visibility.</p> <p>Reference: D. DuBois, M. Green, R. Powell, J. Xu, J. Ashby. 2006. Evaluation of Meteorological and Air Quality Monitoring at Great Basin National Park, Final Report; prepared by Desert Research Institute, Las Vegas, NV (NPS Bibkey 634602)</p>
Wetlands	GRBA_3	<p>The park proposes excluding variance areas within ½ mile of all wetlands to allow access by wildlife and avoid introduction of sediment and contaminants from runoff during construction. Pumping large quantities of water to cool solar generating facilities may result in groundwater feeding into wetlands, a major negative resource impact from pumping.</p> <p>Wetlands are extremely important resources supporting wildlife in desert areas. Wetlands in Spring Valley and adjacent valleys likely provide the most important food sources for the maternity bat colony in Rose Guano Cave only six miles outside the park. The large populations of bats in this colony are persistent visitors to the park and important contributors to the overall ecosystem health in the park and surrounding areas. Wetlands in Spring and Snake Valleys also support landscape permeability by providing water sources for mammals moving back and forth between the park and other mountain ranges.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>Cumulative effects - When combined with the proposed Clark, Lincoln, and White Pine Counties Groundwater Development area, solar generating plants that require large quantities of water for coolant may have a profound impact on the limited groundwater quantities that feed natural wetland systems in both Spring and Snake Valleys.</p> <p>Reference: Draft EIS for the Clark, Lincoln and White Pine Counties Water Development Project, BLM Groundwater Projects Office, Reno, NV, June, 2011.</p>
Critical Habitat	GRBA_6	<p>There are three active sage grouse leks in the vicinity of the park. In addition, large areas of Spring and Snake Valleys consist of nesting, early brooding, and late summer sage grouse habitat. The park is surrounded by the Spring/Snake Valley Sage Grouse PMU and is in the middle of the Greater Sage Grouse CISA. In light of the potential listing of the sage grouse, we request the exclusion of these habitat areas from solar development variance lands. The park has undertaken management actions to restore sagebrush steppe communities in some of its eastern portions with the intent of enhancing sage grouse habitat and attracting more grouse into these areas. The lek shown to the east of the park outline in the cited map is significant factor in supporting success of that project.</p> <p>Reference: Draft EIS for the Clark, Lincoln and White Pine Counties Water Development Project, BLM Groundwater Projects Office, Reno, NV, June, 2011, Appendix F3.6, Fig. F3.6-10</p>
Protected Areas	GRBA_8 GRBA_9	<p>Three protected areas in Spring Valley: Swamp Cedar Natural Area, Pygmy Sage Natural Area, and Shoshone Ponds Natural Area are all dependent on continued availability of groundwater resources. These three areas provide water and forage for wildlife and are important focal points in support and maintenance of landscape permeability. Individuals of various Species of Management Concern use these resources as they migrate in and out of the park. These migrations and seasonal movements are critical in maintaining biological species diversity as well as genetic diversity of these species.</p> <p>The park recommends excluding variance lands within ½ mile of all three noted natural areas. We propose excluding all variance areas within the gross boundaries of the Highland Ridge Wilderness. Small acreage variance areas appear to be arranged along “cherry-stemmed” roads within that wilderness. Solar generating facilities are inconsistent with wilderness values and would require additional construction of transmission lines which would further degrade wilderness values.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Naturalness	GRBA_8	Note that almost all of the variance lands surrounding the park are rated as having a high Naturalness Index and as such are quality areas the park would prefer to see preserved intact, i.e. included in exclusion areas. Preservation of these intact landscapes and their inherent scenic values is a primary management goal of the park as identified in the enabling legislation that established the park and in the park’s General Management Plan. Naturalness also is an important contributing element in maintaining landscape permeability which is critical to sustaining biological species diversity and genetic diversity of resident park wildlife populations.
Landscape Permeability	GRBA_9	The ecologically important populations of bighorn sheep, mountain lions, and other mammals such as elk, mule deer, and medium- to large-sized carnivores that inhabit or utilize the park benefit significantly from sharing genetic diversity that arrives by way of the permeable areas outlined in black on this map. For some species, long-term persistence will depend on connectivity to surrounding non-NPS areas. The park recommends excluding those variance lands indicated in black, as large solar generating facilities would reduce landscape permeability. Landscape permeability is critical in maintaining biological species diversity and genetic diversity of resident park wildlife populations.
Nighttime Lights	GRBA_10	Dark night skies are a prime component of the park’s scenic qualities as well as an important resource to amateur astronomers, sky watchers, and park campers. The park holds a 3-day astronomy festival every summer and hosts ranger-led star gazing programs two nights each week during the summer months. A night sky inventory was performed recently which confirmed that the area surrounding the park is among the few places in the U.S. least impacted by light pollution. This character is confirmed in the map referenced here. It is extremely important to the park to preserve this attribute. The park identifies variance lands within 25 miles of the park which have dark night skies, are roadless and have a high naturalness index as areas of potential conflict to park resource values from the impacts by persistent and intermittent nighttime light resulting from construction, operation and additional light pollution cumulative impacts of large solar generating facilities.
Viewshed	GRBA_11	From a general NPS perspective, major alternative energy developments should be relegated to the “Seldom-Seen Zone” relative to Key Observation Points within national parks that were created for their scenic values. Areas generally fitting this criterion relative to prime scenic points in the park are recommended for exclusion from solar development. The park is one of the few places in the world where the visitor can climb to higher elevations to experience the solitude and reverence of ancient bristlecone pine forests set against a seemingly boundless landscape of pristine valleys and lofty mountain ranges. It is one of the few places where a camera can capture images of the scope and scale of that experience. The NPS cannot

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

	<p>preserve that visitor experience unless we also work to preserve the surrounding landscape against expanding industrialism. The park requests all areas with line of sight visible points from within the park that are also roadless, have a high naturalness index and very dark night skies be excluded from development.</p> <p style="text-align: center;">Additional Comments on Viewshed Concerns</p> <p>Public Law 99-565 established Great Basin National Park "...to preserve for the benefit and inspiration of the people a representative segment of the Great Basin of the United States possessing outstanding resources and significant geologic and scenic values...." As approved and signed by the Secretary of the Interior, an excerpt from the park's General Management Plan describing the importance of its scenic resources states, "The views across Snake Valley and Spring Valley as visitors approach the park and from various locations within the park greatly enhance experiences and are a significant park resource. Although these valleys are not within the park boundary, they are critical in conveying the theme of the 'Great Basin physiographic region' to visitors. Without the contrasting valley basins, the mountainous lands inside the park can illustrate only a portion of that theme. The loss or visual impairment as a result of major industrial, commercial, or military activity would alter the pastoral scene that adds a critical dimension to the national park."</p> <p>Two additional excerpts from the Summary chapter of the GMP state, "Resources of particular concern include ...air quality and the vistas across the two broad valley basins to the east and west..." and "To preserve the significant views of the Snake Valley and Spring Valley basins, which are an integral part of the Great Basin experience, the Park would review, evaluate, and make recommendations to local governments concerning all proposals for major developments or activities that might affect the visual integrity of the valleys." (Final General Management Plan, Development Concept Plans, Environmental Impact Statement, Great Basin National Park, Nevada; ROD published March 2, 1993.) Specifically noted in the second paragraph of the Summary chapter for the General Management Plan is "... preservation of important scenic, natural, geologic, and cultural resource values (including the viewshed from Wheeler Peak, the bristlcone pine forests, the Wheeler Peak cirque, and the Osceola Ditch)."</p> <p>Because of its extensive high relief centered on the Southern Snake Range, it is difficult to avoid substantial impacts to the park's scenic values when developments are sited in the adjacent valleys. The adjacent valley approaches themselves are considered to be components of the visitor experience. Additionally, large areas of the surrounding valleys are visible from the peak of Mt. Wheeler, the prime viewing point within the park. A hiking trail to the peak accommodates</p>
--	--

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

	<p>approximately 1,200 visitors per year that manage to make the strenuous hike to the top to experience the relatively unspoiled beauty of the surrounding Great Basin. The park viewshed analysis map (Key Observation Points-12/5/11) shows that large portions of the v areas in the valleys adjacent to GRBA are visible within 13% to 55% of the selected KOPs in the park. KOPs included in the analysis were chosen based on significant points of interest such as visitors centers, scenic pullouts on the Wheeler Peak Scenic Drive, peak elevations at or near hiking trails or bristlecone pine groves, within four bristlecone pine groves, four park campgrounds, and two points along the Osceola Ditch.</p> <p>Citing the BLM Manual H-8410-1, Visual Resource Inventory, Sec. I.B. (General Guidance): “Sensitive areas such as those near major highways or communities or adjacent to national parks should be given special treatment.” Also refer to H-8410-1, sec. III. A. (Sensitivity Level Analysis) – there is no question that the areas surrounding GRBA rank high for sensitivity level factors 1-4. Factor 5 is also applicable when consideration of the Highland Ridge Wilderness abutting the southern boundary of the park is included.</p>
	<p style="text-align: center;">Additional Background Comments</p> <p>The projects identified below located in the vicinity of GRBA need to be analyzed when considering the cumulative impacts of proposed solar energy projects.</p> <p><u>Spring Valley Wind Project</u> - The 150 MW wind farm is under construction on 7,673 acres of BLM lands in north Spring Valley, five miles east of GRBA. The project will consist of 75 wind turbines, 27 miles of roads, an electrical substation, and utilize an existing 230 kilovolt (kV) transmission line for distribution. Park comments provided to the BLM for the EA and FONSI included viewshed, night skies, cultural resources, biological resources, and cumulative impacts.</p> <p><u>Wilson Creek Wind Project</u>- Potential 31,000-acre project on BLM lands located about 22 miles south of GRBA and consisting of up to 350 wind turbines and 990 MW of power. Project scoping report completed and draft EIS is being prepared. Potential park issues include viewshed, night skies, and cumulative impacts.</p> <p><u>Hamblin Valley Wind Project</u> - Potential 43,812-acre project area would be located about 10 miles south east of GRBA and is administered by the BLM Fillmore Field Office (17,939 acres), in Utah, and BLM Schell Field Office (25,873 acres), in Nevada. This project is in the planning stage; BLM has issued ROWs for the met towers. Potential park issues include viewshed, night skies, biological resources, and cumulative impacts.</p>

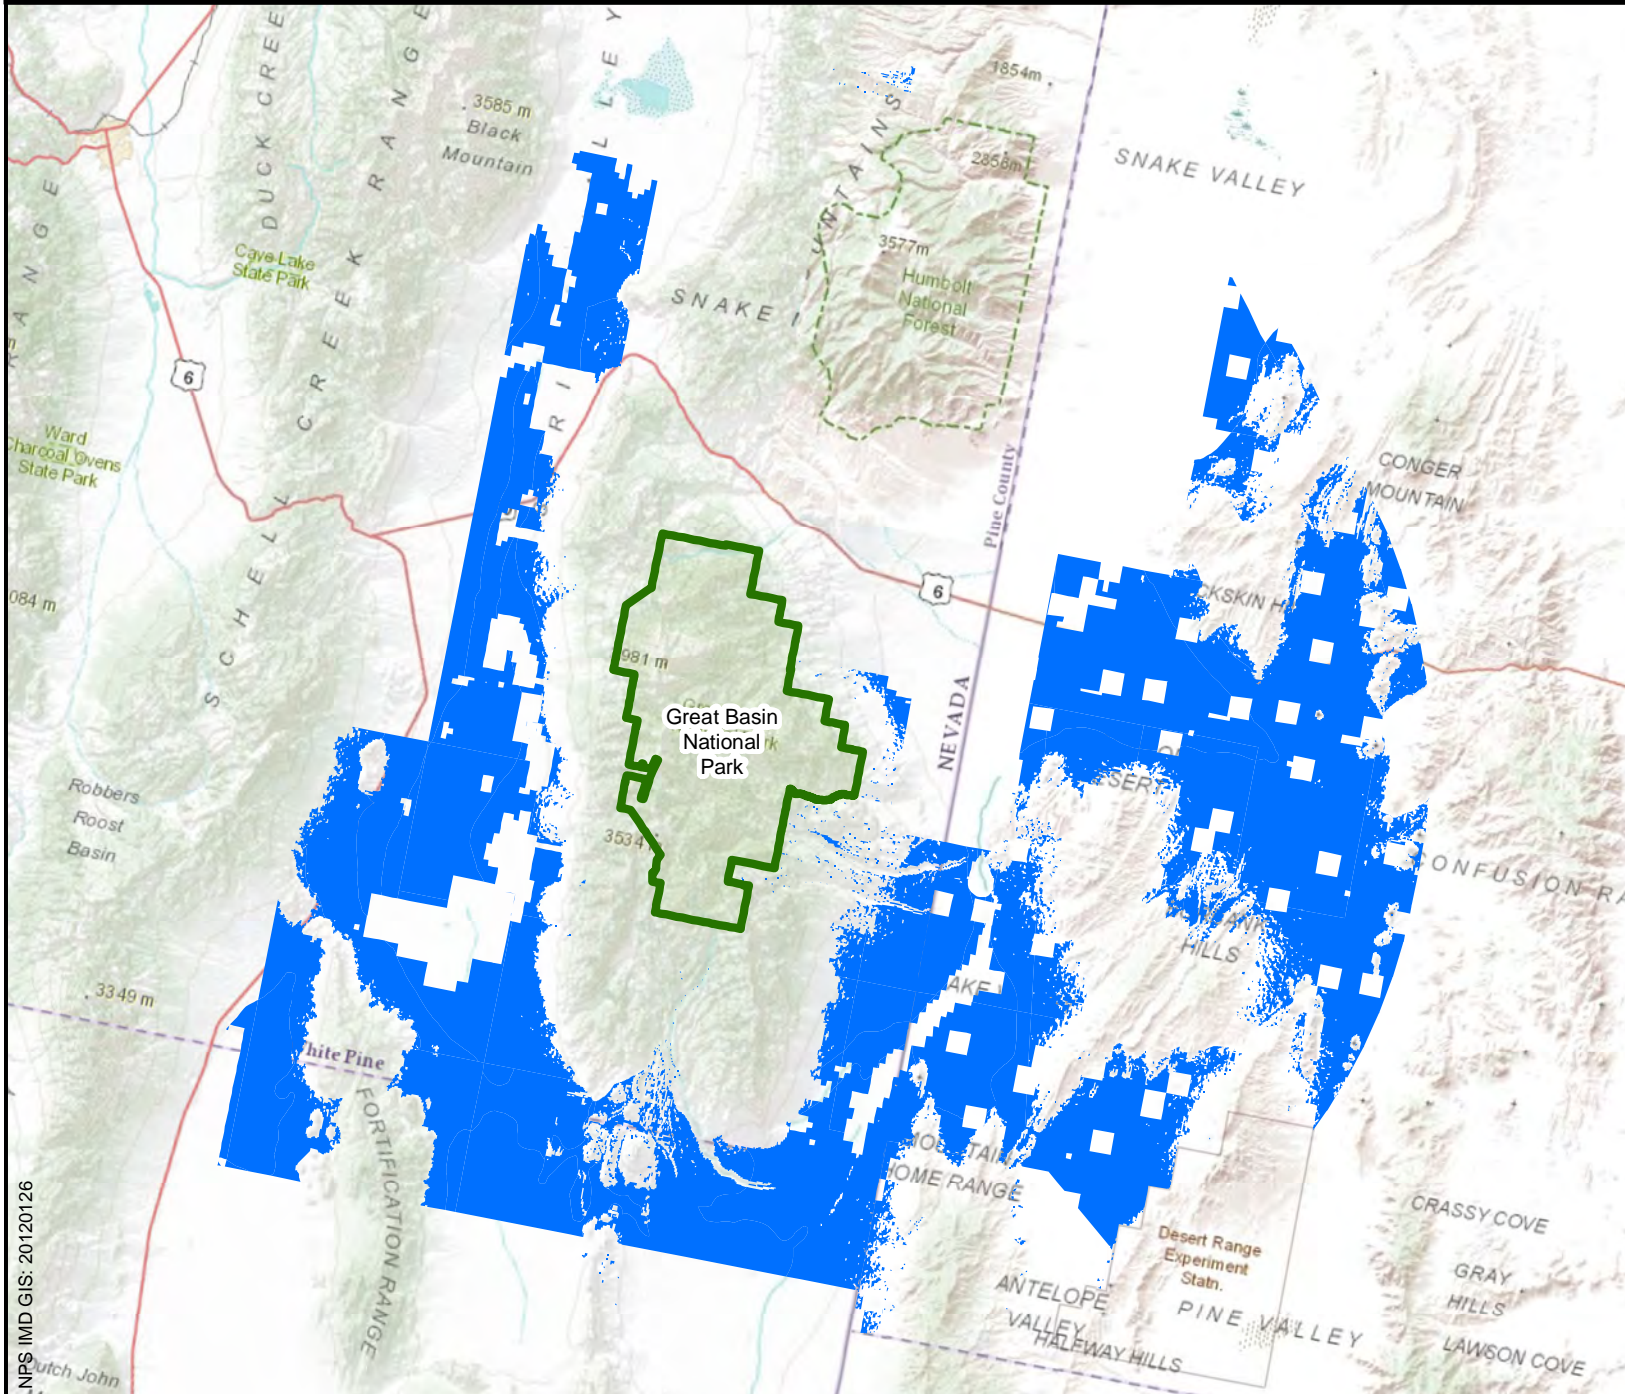

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p><u>Clark, Lincoln and White Pine Counties Groundwater Development Project</u> – Includes 306 miles of a buried water pipeline; 323 miles of 230 kilovolt (kV), 69 kV and 25 kV overhead power lines; seven electrical substations; three pressure reducing facilities; five pumping stations; six regulating tanks; a 40 million-gallon-per-day buried storage reservoir; and a 165 million-gallon-per-day water treatment facility. Extensive ROWs in both Spring and Snake Valleys surrounding the park for development and significant acreage impacted by water table drawdown. NPS issues submitted for the DEIS include air, water, soils, wildlife, aquatic, biologic, land use, recreation, rangeland, special designations, Native American traditional values, and socioeconomics.</p> <p><u>TransWest Express Transmission Line Project</u> – 700 mile long, 600 KV line through WY, UT, CO, and NV. One alternative alignment would be 10 miles south of the park. Scoping report completed and DEIS is being prepared. Potential park issues include viewshed, night skies, biological resources, and cumulative impacts.</p> <p><u>Nevada Oil and Gas Developments</u> – The September 2011 Ely District Oil and Gas lease sale EA identified three parcels in Spring Valley. The largest, 30,538 acres, is located less than two miles from the park’s western edge. Potential park issues include viewshed, air quality, wildlife, vegetation, and cumulative impacts.</p> <p><u>Utah Oil and Gas Developments</u> – In 2009, the Fillmore District BLM office had proposed leasing multiple parcels on the Utah side of Snake Valley within six miles of the park. Leases were subsequently withdrawn until the district RMP has been updated, which is in progress. Potential park issues include Potential park issues include viewshed, air quality, and cumulative impacts.</p>

NPS IMD GIS: 20120126

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Lake Mead NRA (LAKE)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind and Water Erodibility	LAKE_1 LAKE_2	<p>Dust is the number one source of PM-10 (Particulate Matter 10 microns or smaller) air pollution in the Mojave Desert. Construction and post-construction activities, service road maintenance and use, loss of vegetation, and disturbance of soil crusts caused by development in the desert cause wind erodibility Classes 1 and 2 soils to produce significant quantities of fugitive dust, impacting air quality and visibility in the park and surrounding areas. Soils with high wind erosion potential exist around much of LAKE’s boundary. LAKE identifies all variance area lands within 25 miles that have Wind Erodibility Class 1 or 2 soils and a high naturalness index, as areas of potential conflict to NP resource values.</p>
Critical Habitat	LAKE_3 LAKE_4 LAKE_6	<p>Maintaining links and connectivity of habitats is an important aspect for maintaining the viability of wildlife populations in the park, including desert tortoise and bighorn sheep. All wildlife population linkages adjacent to and 25 miles out from LAKE, identified by the USFWS, should be excluded from development.</p> <p style="text-align: center;">Additional Wildlife Resource Comments</p> <p>On the Arizona side of the park the majority of the lands are checker-boarded in ownership and therefore difficult to lease for solar development. However, there are some areas of consolidated federal ownership along the eastern side of Lake Mohave in the Black Mountains. The Black Mountains support the largest desert bighorn sheep population in the country and therefore should not be developed for solar purposes. The bighorn sheep habitat in the Black Mountains is shared between the NPS and BLM.</p> <p>NPS has recently partnered with the Federal Highway Administration, the Arizona Department of Transportation, and Arizona Department of Game and Fish to build sheep overpasses on U.S. Highway 93 to maintain the integrity of the sheep population. These crossings came at a cost of approximately \$5 million and were funded by the Federal Highway Administration. NPS and BLM staff’s are actively working to maintain the integrity of this bighorn sheep population and the disturbance associated with solar development would go against these efforts. NPS recommends all known wildlife linkages between the Black Mountains and LAKE be excluded</p>

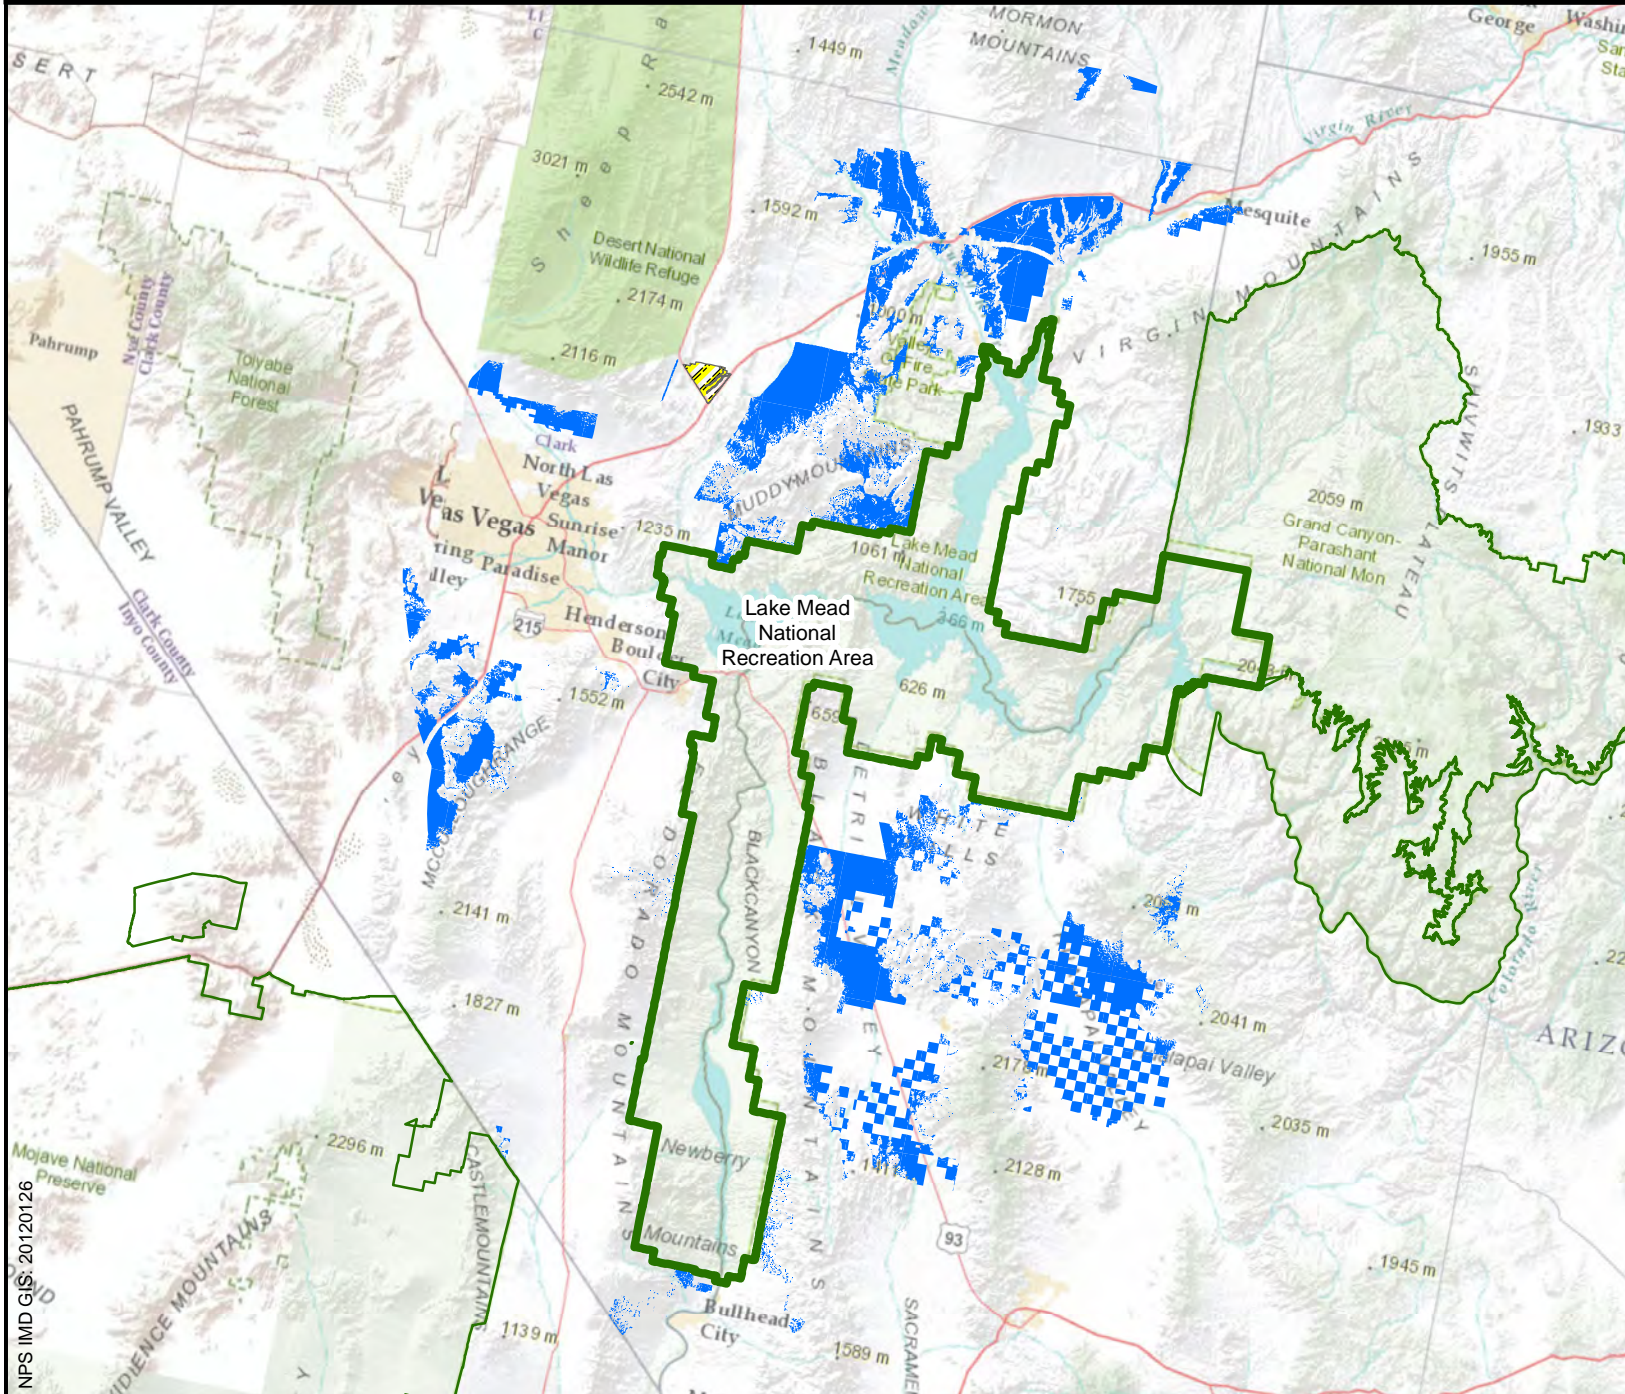

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		from solar development.
Roadless Areas, Naturalness Land and Landscape Permeability	LAKE_7 LAKE_8 LAKE_9	Note most of the variance lands surrounding the park are rated as having a high Naturalness Index and many are within roadless areas and/or have high landscape permeability, as such these are high quality areas the park would prefer to see preserved intact. Preservation of these intact landscapes and their inherent scenic values is a primary management goal of the park since these areas are critical to sustaining biological species diversity and genetic diversity of resident park wildlife populations and for preserving park viewshed. The park recommends all known bighorn linkages between the Black Mountains and LAKE be excluded from solar development.
Nighttime Lights	LAKE_10	The NPS manages dark night skies as a natural resource. There is increasing research showing dark sky importance to ecosystem function, and demonstrating the multiple adverse impacts of light pollution to community ecology (Longcore and Rich, 2004). Animals can experience increased orientation or disorientation from additional illumination and are attracted to or repulsed by glare, which affects foraging, reproduction, communication, and other critical behaviors. The park recommends that areas with predominantly dark night skies around the park be excluded in the area of analysis to protect dark sky resources. The park is concerned about potential resource conflicts resulting from light pollution during construction, and operation, as well as other secondary sources of light related to large solar facilities. The park identifies variance lands within the area of analysis which have dark night skies, are roadless and have a high naturalness index as areas of potential park resource conflicts.
Viewsheds	LAKE_11	The visual resources around the park reflect undisturbed open vistas. Protecting these largely undeveloped views surrounding the park is critical to preserving the unique visitor experience at LAKE. As such, the park requests all variance areas with line of sight visible points within the park, which have a high naturalness index are roadless and dark at night be excluded from development.
		Additional Background Comments Special status areas exist along the majority of the lands surrounding the Nevada side of LAKE. By removing these areas from solar development, over 90% of the park boundary in Nevada would be protected.

Solar Energy Development in Six Southwestern States**

Park Name: Aztec Ruin NM (AZRU)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	AZRU_1	<p>Most of the variance lands within 10 miles of the park are classified in the wind erodibility group 2. The majority of such lands lie south and southeast of the park, but significant areas also occur north of the park. Winds that regularly blow in the area could carry soils and fine particles from the solar development construction and operations into the park and surrounding area, degrading the visitor experience and potentially depositing soils in and around the historic ruins.</p> <p>The park requests that variance lands south, east and northwest of the park on erodibility soils group 2 be excluded within 10 miles of the park boundary</p> <p>References: Field, J. P., J. Belnap, D. D. Breshears, J. C. Neff, G. S. Okin, J. J. Whicker, T. H. Painter, S. Ravi, M. C. Reheis, and R. L. Reynolds. 2010. The ecology of dust. <i>Frontiers in Ecology and the Environment</i> 8:423–430. Neff, J. C., A. P. Ballantyne, G. L. Farmer, N. M. Mahowald, J. L. Conroy, C. C. Landry, J. T. Overpeck, T. H. Painter, C. R. Lawrence, and R. L. Reynolds. 2008. Increasing eolian dust deposition in the western United States linked to human activity. <i>Nature Geoscience</i> 1:189-195. Okin, G. S., J. E. Bullard, R. L. Reynolds, J.-A. C. Ballantine, K. Schepanski, M. C. Todd, J. Belnap, M. C. Baddock, T. E. Gill, and M. E. Miller. 2011. Dust: Small-scale processes with global consequences. <i>EOS, Transactions, American Geophysical Union</i> 92:241-248.</p>
Viewshed	AZRU_11	<p>The viewshed from the main visited areas of the park would be potentially impacted by utility scale solar developments in several areas indicated northeast, to east, and then southeast of the park.. The park requests that the variance lands indicated on our mapping be excluded. In some cases the view from the archeological sites is still relatively unimpaired, giving visitors a feeling for the landscape that existed when the ancestral Pueblo people lived in the area. Development in these areas would impact this important aspect of visitor experience.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Carlsbad Caverns NP (CAVE)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	CAVE_1	<p>BLM variance lands lie primarily to the northwest of the park. A portion of those lands are classified as Group 1 wind erodibility lands; considered to have soils with high potential for wind erosion. Proposed developments on v lands northwest of the park have a high potential for causing wind derived airborne soils and particulates reaching the park. The park is a Class 1 airshed under the Clean Air Act and managed as such. A Methodology applied for determining visibility impacts (VISCREEN) is the method required under the FLAG workgroup or (CALPUFF) to model such occurrences.</p> <p>http://nature.nps.gov/air/permits/flag/docs/FLAG</p> <p><i>Air Quality in National Parks</i> <i>2008 Annual Performance & Progress Report</i> <i>Natural Resource Report NPS/NRPC/ARD/NRR—2009/151</i></p> <p>Generation of excess windborne particulates that exceed the National Ambient Air Quality Standards (NAAQS) from potential utility scale solar developments close to the park is a concern. A quantitative measure of the impact could be illustrated in the Solar PEIS through computation of the consumption of Class I and II increments by the solar developments. Particulate matter and soils derived from ground disturbances in the utility scale development (clearing and construction, operation with long-term exposed soils, and access roads) could enter the park and potentially impact air quality, land surface vegetation and habitats, and eventually be a source for water erodibility.</p> <p>The park requests that variance lands out to 15 miles northwest of the park’s boundary and in the wind erodibility group 1 be excluded.</p>
Wetlands	CAVE_5	<p>Several groupings of variance lands approximately 1 mile from the northern boundary of the park are classified as wetlands. In the arid regional environment around the park, wetlands are generally an oasis of moisture for plant and wildlife, and habitat supporting migrating birds. These resources support some of the environments within the park and thus have value to the NPS and our visitors.</p> <p>The park requests the exclusion of wetlands within 1 mile of the park to protect this resource.</p>
Protected Areas	CAVE_5	<p>A large grouping of variance lands lie immediately north and also out to approximately 3 mile from the northern boundary of the park. These lands are congruent or adjacent to lands classified</p>

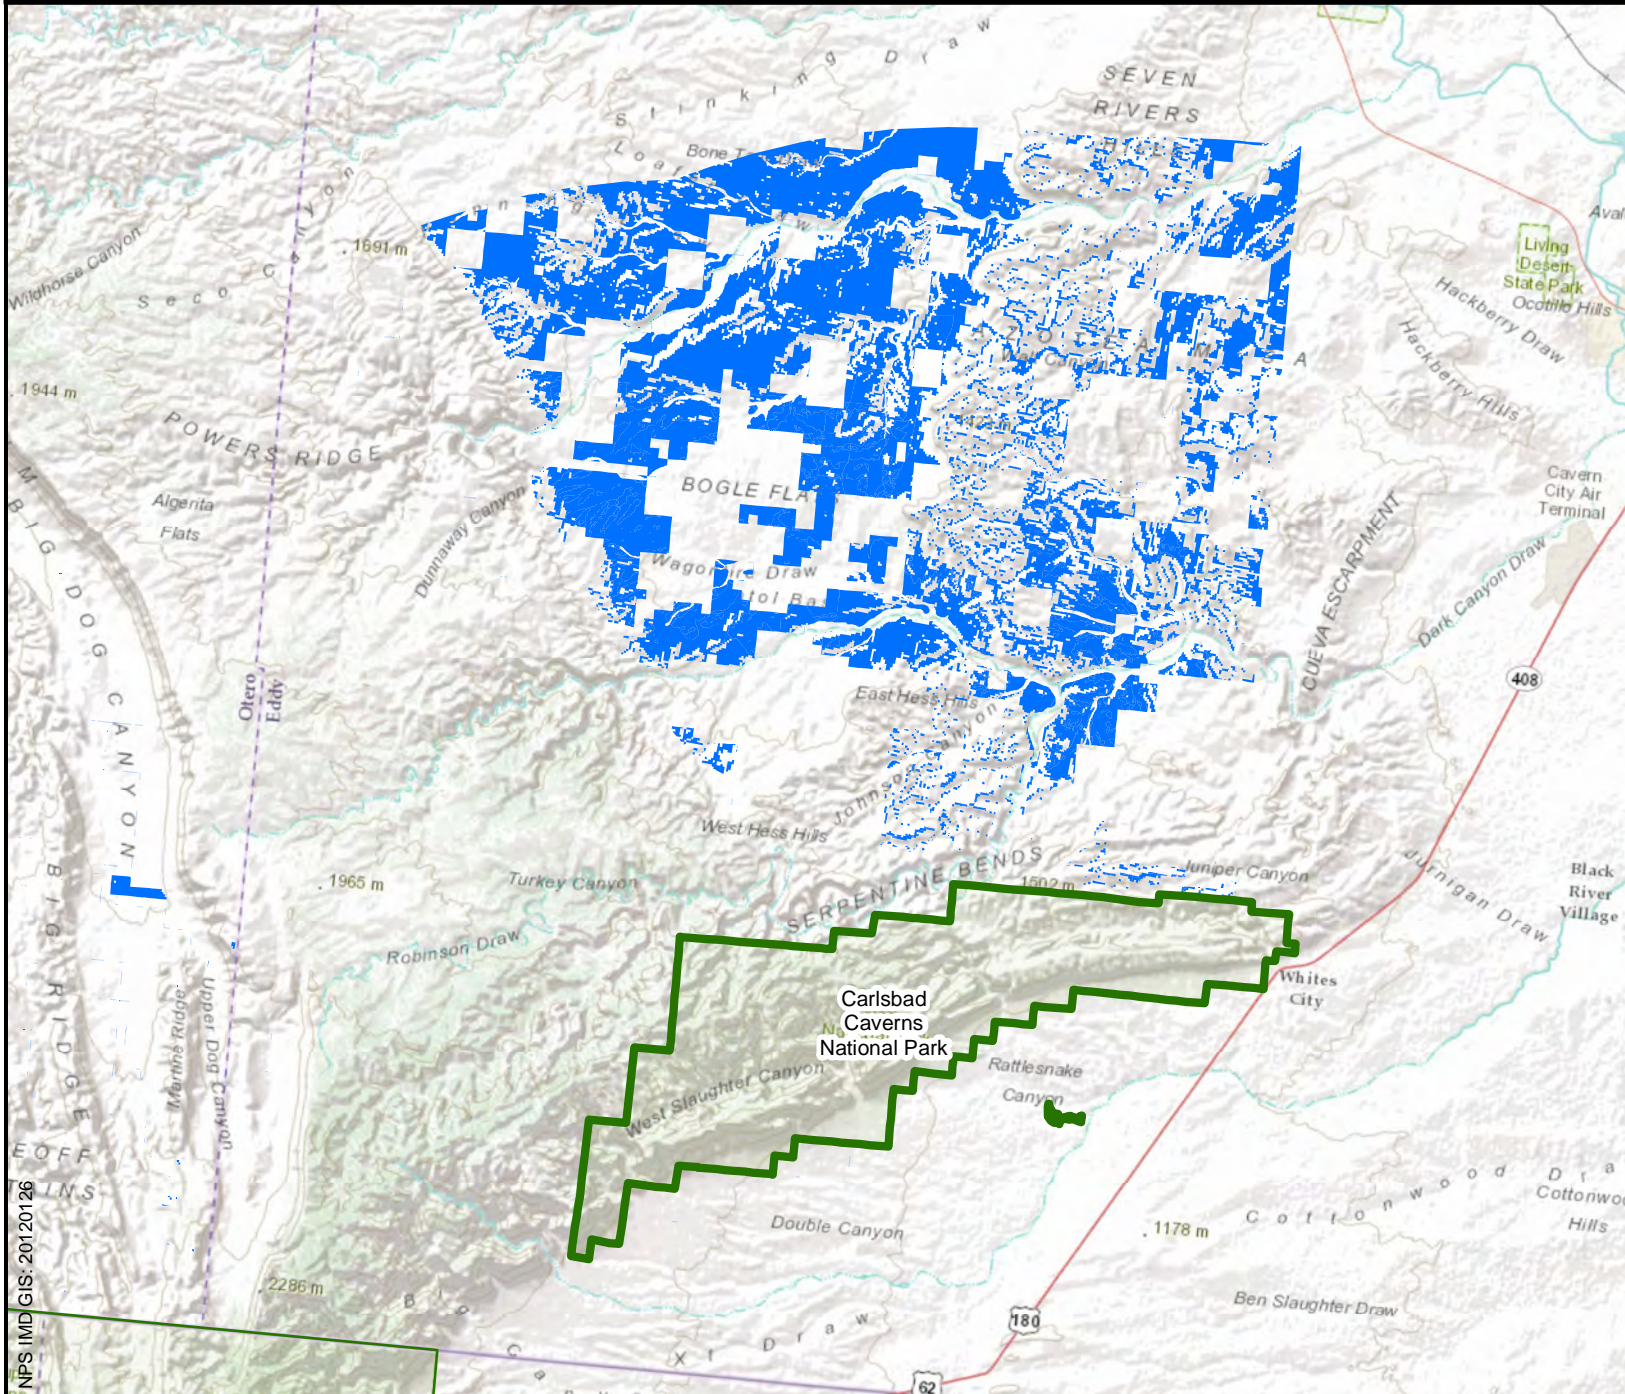

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		as Protected Lands that extend into the park. Protected Lands should be afforded protection from the utility scale solar developments because they provide biodiversity connections to more extensive suitable lands. The park requests exclusion of the variance lands within 3 miles of the park's boundary that are within 1 mile of designated protected lands.
Nighttime Lights	CAVE_10	Night sky is a valuable resource for the visitor experience. Very few small to large light so the park requests the exclusion of all variance lands 20 miles northwest of the park's boundary to protect that resource.
Viewshed	CAVE_11	<p>A large grouping of variance lands lie north of the park; extending out more than 25 miles from the park. The park analyzed viewshed from several important visitor use KOPs and from current GIS data and maps. Some of these lands out to 15 miles from the park's boundary are within the viewshed of these KOP's. Large, utility scale solar developments have the potential to impact visitor's experience viewing broad undeveloped expanses from the park.</p> <p>The park requests the exclusion of all variance lands 15 miles northwest of the park's boundary to protect that resource.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Chaco Culture NHP (CHCU)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	CHCU_1	<p>Wind-driven dust is a common resource impact for the park. Particularly pervasive during spring, winds can bring dust to the park in any season. While eolian processes are a natural condition in the park, an excess of dust particles can impact the health of people and wildlife, reduce visibility, and temper the enjoyment of park visitors. We would expect utility scale solar developments to increase dust transport as a result of soil disturbance, vegetation loss, and water withdrawals. Though winds can come from any compass direction, they typically arrive from the west. To reduce the likelihood of direct and effects of disturbance-caused dust on the park, we recommend the exclusion of areas that lie to the west, south, and north of the park's four units where such variance lands overlay wind erodibility Group 1 and 2 soils. To the extent that disturbance outside of this exclusionary area would contribute to regional dust, this could also have an adverse effect on the park.</p> <p>References: Field, J. P., J. Belnap, D. Upstream Watersheds, Naturalness Index	CHCU_4	<p>Upstream Watersheds. Utility scale solar energy development within any of the park's watersheds is a concern due in part to the potential for unstated but large water consumption (withdrawals) and the increased potential for environmental contamination resulting from facility's construction and operations. We are concerned that dewatering activities may lead to changes in surface streamflow patterns and depletion of area groundwater supplies, as well as the possible diminishment of important spring and seep resources. Chaco Wash is prone to floods that damage cultural and historic resources. Increased runoff due to upstream development would</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>increase flood hazards. Also, the potential for contamination of surface waters or groundwater resources nearby or within the park is also a concern. The park has three major ephemeral streams (washes) within its boundary, as well as numerous side drainages, that are important to the ecological health of the park. These drainages fall within the highlighted watershed units.</p> <p>Based on this map, we recommend exclusion of the watershed areas shown in order to lessen impacts on wildlife and plant communities, preserve the quality and availability of water for park operations, and to protect important seep and spring resources that have natural and cultural significance.</p> <p>Naturalness Index. The area immediately surrounding the park is dominated by grazing activities and isolated residential development. This low level of development helps to protect many of the park's cultural and natural resources, including impacts of soil disturbance; new roads and other infrastructure; water pollution; habitat degradation; light, heat, and noise; destruction of archaeological and paleontological resources, etc. Excluding utility-scale solar development in this area would limit some potential resource effect and the overall risk to cultural resources in and adjacent to park. NPS requests that BLM consider excluding certain of their V lands in the more natural areas, and make the attempt to focus development closer to roads and less natural areas.</p>
<p>Nighttime Lights</p>	<p>CHCU_10</p>	<p>While not entirely free of nighttime light pollution, the park has remarkably dark skies. Darkness is important to park visitors who enjoy the park's dark and clear nighttime skies, and to the many wildlife species that depend upon the cover of night to evade predators. The park's Night Sky Program is among the most popular visitor activities, as well as "stargazing" through our observatory's 25-inch telescope which was installed here specifically because of the park's low levels of light pollution. The park has an active Night sky program for visitor and University sources astronomers. Excluding utility-scale solar developments in the area of analysis, and beyond, may be necessary to mitigate effects of associated artificial nighttime lighting. The park requests that variance lands 15 miles to the south and southeast, and 25 miles to the west, north, and east of the park's boundary be excluded to protect this vital resource.</p>
<p>Viewshed</p>	<p>CHCU_11</p>	<p>From Tsin Kletsin great house on South Mesa, one can, on a clear day, view the top half of Shiprock, the remnant of a volcanic intrusion approximately 65 miles away. While a 65-mile exclusion would seem unreasonable, in certain cases excluding solar development within 15, 25, or more miles may be needed to preserve the scenic character of the park. The high potential for significant light reflection from certain solar facilities is a major concern. Other scenic impacts</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

	<p>include changes to vegetation regimes, land grading, road building, transmission infrastructure, and ancillary structures. Views from the park’s higher elevations are most vulnerable, affecting miles of public trails and numerous archaeological sites, some 1000-or-more-years old.</p> <p>Though this map series doesn’t depict cultural resources, these are among the most important of resources to the park. Chaco Culture National Historical Park (CHCU) was established by Congress in 1980 to recognize, preserve, and interpret the unique archaeological resources associated with the prehistoric Chacoan culture in the San Juan Basin and to promote research of its nationally significant resources. Its approximately 34,000 acres incorporate the former Chaco Canyon National Monument, established in 1907, and additional lands. The 1980 CHCU enabling legislation further designated a number of "Chaco Culture Archaeological Protection Sites" that NPS helps to protect, preserve, maintain, and administer through cooperative agreements with landowners. With some later additions, approximately 40 Chacoan greathouse sites are now so designated. Some of these designated protection sites are on federal lands managed by BLM. The park was named a UNESCO World Heritage Site in 1987, making it one of only a small number of sites in the country to carry this special designation. The Chaco Culture World Heritage Site designation also named another NPS unit, Aztec Ruins National Monument (AZRU), as an associated site, as well as the BLM-managed ruins of Casamero, Kin Nizhoni, Pierre’s Site, Twin Angels, and Halfway House. Approximately 4000 distinct archaeological sites are known to exist within the boundaries of Chaco Culture NHP, and countless other related archaeological sites are found throughout the surrounding region. There is a strong likelihood that utility scale solar development could destroy or otherwise adversely affect many of these resources, and thus adversely affect our understanding of the Chacoan culture as a whole. We would also expect potentially adverse impacts on important cultural landscapes. A range of other resources could also be adversely affected, including scenic (visual) quality, dark night skies, natural sound, water quality and quantity, air quality, soil and other geologic resources, wildlife, vegetation, and paleontological resources. However, lacking specific and detailed information about the degree and extent of future solar energy development in near proximity to the park, our ability to assess actual impacts is notably limited.</p> <p>The area highlighted is our minimum recommendation for exclusion of variance lands in order to protect the park’s scenic resources.</p> <p>We also ask BLM to evaluate the cultural and historic landscape surrounding the park, which</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: El Malpais NM (ELMA)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	ELMA_1	El Malpais has extensive wind erodible soils (both group 1 and 2) both to the South and North of the park. These soils pose a potential threat to air quality and visitor experience at the park both during construction and the operation of utility scale solar developments built on these lands. The exclusion of these lands on wind erodible soils out to 10 miles away from the park’s boundary is recommended.
Protected Areas	ELMA_5	An area immediately south (extending to 15 miles out) of the park lies within an open and easily viewed area from within and around the monument. Utility scale solar developments would potentially impact two existing BLM wilderness areas adjacent to El Malpais NM and 97,428 acres of proposed wilderness within the park. NPS requests that this area be excluded from development to preserve wilderness and natural view shed characteristics. Supporting documents: Wildness Act, NPS Organic Act, El Malpais NM establishment legislation.
Nighttime Lights	ELMA_10	Both ELMA and ELMO are eligible for inclusion in the NPS Dark Night Skies program, and currently have nearly pristine night sky visibility. Development and associated operations (artificial lighting and light pollution) would put this valuable resource in jeopardy. Therefore, NPS requests exclusions of variance lands 15 miles out from the park’s south and west boundary. The park also recommends that variance lands north and northeast of the park out to 15 miles from the park’s boundary be excluded. While the lands north and northeast of the park are close to an existing light source in the park’s viewshed, future reductions of lighting in that city could make these lands more valuable to the night sky viewing of park visitors than today.
Viewshed	ELMA_11	Views from the park to the north, south, east and west of the park are threatened by potential utility scale solar developments to various degrees depending on distance from the park. The potential impacts would be to the scenic views of the relatively natural landscape of historic and cultural value to park visitors. The park requests all variance lands within 15 miles of the park be excluded from these developments to protect the viewshed. Reference: El Malpais NM establishment legislation.

Park Name: El Morro NM (ELMO)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Nighttime Lights	ELMO_10	Both national monuments (ELMA/ELMO) are eligible for inclusion in the NPS Dark Night Skies program, and currently have nearly pristine night sky visibility. Development and associated artificial lighting and light pollution would put this valuable resource in jeopardy. Certain V lands southwest of the park lie in relatively dark areas currently with no readily discernible lighting beyond 20 miles out. NPS requests exclusions of variance lands 15 miles southwest and southeast of ELMO from the potential utility scale solar developments.
		<p style="text-align: center;">Additional Background Comments</p> <p>The park has extensive variance lands that are in wind erodible soils (Group 2) to the southwest of the park. These soils pose a potential threat to air quality and visitor experience at the park both during construction and the operation of utility scale solar facilities. For this soils class, extensive mitigation for variance lands within 15 miles of the park.</p>

Solar Energy Development in Six Southwestern States**

**Park Name: Guadalupe NPS (GUMO) Note: This park is located in Texas, adjacent to the New Mexico state line.
Recommended exclusions for this park are located in New Mexico.**

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	GUMO_1	<p>Traffic from routine service equipment would contribute to fugitive dust that would have a moderate, long-term, adverse effect on air quality in the park which is downwind from those tracts.</p> <p>Variance lands lie primarily to the northwest of the park. A portion of those lands are classified as Group 1 wind erodibility lands; considered to have soils with high potential for wind erosion and extending north-northwest of the park for 25 miles. Soils on tracts northwest of the park on Crow Flat are identified as highly erodible. Proposed developments on variance lands northwest of the park have a high potential for causing wind derived airborne soils and particulates reaching the park. A recent example of this condition was the fugitive dust issue as a result of firefighter response equipment on those roads (Crow Flat)during the 2010 Cutoff Fire Guadalupe NP is a park with a Class 1 airshed under the Clean Air Act (Public Law 95 – 217) and managed as such.</p> <p>Generation of windborne particulates in excess of the National Ambient Air Quality Standards (NAAQS) due to utility scale solar developments within the area of analysis is a concern. Recent trend analysis of visibility at the park reveals the visibility condition is stable. Particulate matter and soils derived from ground disturbances in the utility scale development (clearing and construction, operation with long-term exposed soils, and access roads) could enter the park airshed and impact air quality, deposit on vegetation and disrupt sensitive habitats.</p> <p>The park requests that variance lands out to 15 miles northwest of the park’s boundary and in the wind erodibility group 1 be excluded.</p> <p>References: http://nature.nps.gov/air/permits/flag/docs/FLAG <i>Air Quality in National Parks</i> <i>2008 Annual Performance & Progress Report</i> <i>Natural Resource Report NPS/NRPC/ARD/NRR—2009/151</i></p>

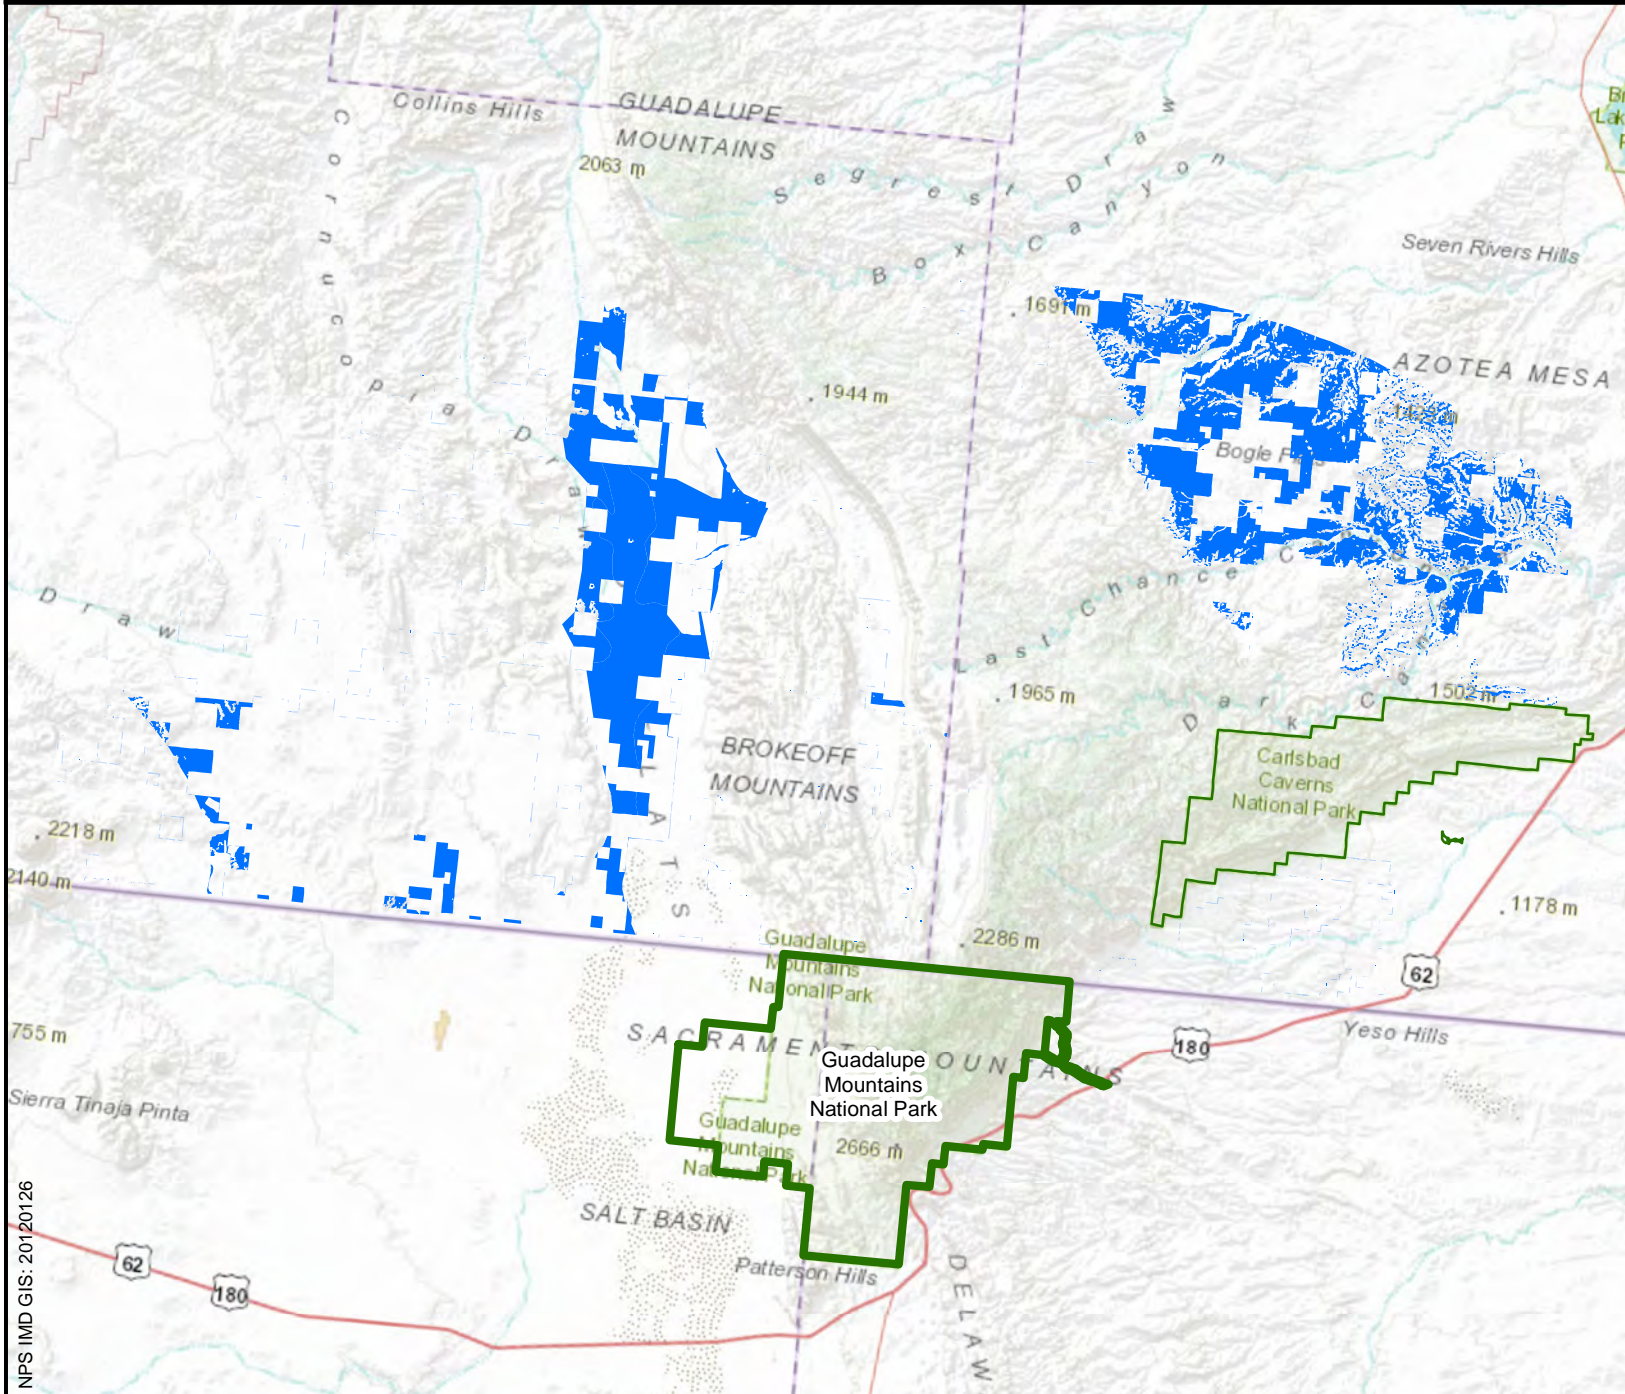

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p style="text-align: center;">Additional Air Quality Comments</p> <p>Guadalupe Mountains National Park was designated a Class I airshed by the 1977 amendments to the Clean Air Act (Public Law 95 – 217). Class I airshed designation allows for very little deterioration in air quality, and is intended to protect areas of unique scenic value. In addition, under the terms of the Clean Air Act, the wilderness portion of Guadalupe Mountains National Park is designated Class I. The 1977 amendments require that state implementation plans to protect visibility in a 100 km (62 mile) region around Class I areas.</p>
Nighttime Lights	GUMO_10	<p>Dark night sky is a wilderness character that the NPS is trying to preserve in the congressionally designated Guadalupe Mountains Wilderness. The current night sky condition around the park is a significant resource. Few NPS units or locations in the west rival the experience visitors enjoy looking in almost all directions from the park at night.</p> <p>Variance lands in the north and northwest of the park are highly visible from the park’s wilderness area. The park would support Carlsbad Caverns National Park’s request for a 20 mile exclusion of variance lands; thus protecting more of Guadalupe Mountains NP’s nighttime and visual resource.</p> <p>The park, therefore, requests exclusion of all variance lands 30 miles from the park in all directions.</p>
		<p style="text-align: center;">Additional Background Comments</p> <p>Disturbances in and around seeps, springs, and wetlands in arid areas have moderate, long-term, adverse impacts on wildlife due to their avoidance of human activity. There are limited alternate water resources in the area for wildlife to use.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Salinas Pueblo Missions NM (SAPU)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	SAPU_1	<p>Soils around Gran Quivira are primarily #816 Pirodel-Harvey-Pinon complex, aeolian with high wind-erodibility. Park is concerned that disturbance within 10 miles could lead to higher levels of airborne particles in the air and potentially more deposits within the park, depending upon the proximity and level of winds, and especially during the construction/disturbance period. An increase in airborne particles can have a direct negative impact on visitor experience. Source: Soil Survey of Socorro County Area New Mexico, USDA 1988; Salinas Pueblo Missions National Monument Resources Management Plan, 1997; Land Protection Plan, 1984.</p> <p>While soils (primarily Witt Series) around Abo and Quarai are generally less aeolian (wind-derived and driven than the Gran Quivira area, the park is still concerned about an increase in airborne particles due to the disturbance from potential utility scale solar developments.</p> <p>The park requests exclusion of variance lands for utility scale solar developments 10 miles from the Gran Quivira Unit.</p> <p>References: Soil Survey Torrance Area New Mexico, USDA 1970 Salinas Pueblo Missions National Monument Resources Management Plan, 1997 Land Protection Plan, 1984.</p>
Upstream Watershed	SAPU_4	<p>The Park is concerned that increased erosion from soils that are susceptible to water erosion located upstream of the park would impact the park due to solar energy facility construction and operation on variance lands. The area of specific concern is northeast of Abo, where runoff would drain into arroyos that flow through the park. There is also a potential impact due to upstream invasive species that could re-propagate in the park (this potential impact already exists naturally, but could increase with ground disturbance). These variance lands are either in or adjacent to water flow lines and could represent a negative change to water flow into the Abo Unit of the park.</p> <p>The park requests exclusion of all variance lands for utility scale solar developments upstream from the Abo Unit.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>References: Salinas Pueblo Missions National Monument Resources Management Plan, 1997; Land Protection Plan, 1984 Salinas Pueblo Missions National Monument Resources Management Plan, 1997 Land Protection Plan, 1984</p>
<p>Naturalness Index</p>	<p>SAPU_7 SAPU_8 SAPU_9</p>	<p>The park is concerned about preserving the existing naturalness landscape from utility scale solar development impacts on variance lands close to all park site units. This includes but is not limited to preservation of surrounding forest and grasslands, wildlife habitat, rangeland, natural sound, and night sky. These concerns are of particular concern at the Gran Quivira Unit, which is currently only minimally impacted by modern intrusions. Park visitors often comment on the serenity and “loneliness” of the area, which is a significant interpretive aspect of the Gran Quivira Unit and is critical to visitor understanding of the cultural history of the park.</p> <p>References: In the Midst of a Loneliness: The Architectural History of the Salinas Missions, NPS 1988 Abo Cultural Landscapes Inventory, 2002 Quarai Cultural Landscapes Inventory, 2002 Gran Quivira Unit Cultural Landscapes Inventory, UNM 2010 Salinas Pueblo Missions National Monument Resources Management Plan, 1997 Land Protection Plan, 1984 Establishing Legislation P.L. 96-550, Dec. 19, 1980, Title VI Salinas National Monument (Now Salinas Pueblo Missions National Monument)</p> <p style="text-align: center;">Additional Cultural Resources Comments</p> <p>The park is particularly concerned about soil permeability at the Gran Quivira Unit, where soil types are considered to be highly permeable, and the area is a known cave and karst resource. In addition, caves in this area are known to contain cultural resource fabric and changes to permeability could potentially impact those cultural resources, as well as natural resources. Numerous references to caves beneath the monument exist, along with numerous references of possible cultural material/fabric within the caves. While the caves in the area around Gran Quivira are little understood, they have been compared to features found in the Carlsbad NM area and a high potential for connectivity exists.</p> <p>References: Characterization of Near-Surface Geology and Possible Voids Using Resistivity and Electromagnetic Methods at the Gran Quivira Unit of Salinas Pueblo Missions National</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>Monument, Central New Mexico, June 2005 Abo Cultural Landscapes Inventory, 2002 Quarai Cultural Landscapes Inventory, 2002 Gran Quivira Unit Cultural Landscapes Inventory, UNM 2010 Salinas Pueblo Missions National Monument Resources Management Plan, 1997 Land Protection Plan, 1984</p>
Nighttime Lights	SAPU_10	<p>While the night sky is important to the park at all 3 site units, the primary concern exists at Gran Quivira, which is known as an excellent resource for night sky. At least once a year (usually twice per year), the Lake County Astronomical Society in Illinois visits the park under a week-long visitor use permit to study and enjoy the unique deep-space visibility of the area. The LCAS usually hosts a Star-Party for school-age children in the area during their visits to the park. The park likewise hosts a visitor Star-Party at least on an annual basis. The night sky is also important to other researchers who study the relationship between astronomy and cultural features within the park, specifically the petroglyphs of Abo. The pristine night sky is also a significant aspect of preserving the feel and sense of the pueblo ruins as they existed during the occupation periods. Visitors and researchers to the park/area frequently comment to rangers and other staff on the extraordinary visibility of the area, especially Gran Quivira. Currently, there are no light intrusions “glows” impacting Gran Quivira, and intrusions at Abo and Quarai are limited to Albuquerque, Belen, a detention facility at Estancia, and only occasionally from Mountainair.</p> <p>The park requests exclusion of variance lands for utility scale solar developments 25 miles south and west from the Gran Quivira and Abo Units.</p> <p>References: In the Midst of a Loneliness: The Architectural History of the Salinas Missions, NPS 1988 Abo Cultural Landscapes Inventory, 2002 Quarai Cultural Landscapes Inventory, 2002 Gran Quivira Unit Cultural Landscapes Inventory, UNM 2010 Salinas Pueblo Missions National Monument Resources Management Plan, 1997 Land Protection Plan, 1984 Establishing Legislation P.L. 96-550, Dec. 19, 1980, Title VI Salinas National Monument (Now Salinas Pueblo Missions National Monument)</p>
Viewsheds	SAPU_11	<p>The park is concerned about preserving its viewshed at all 3 site units. While Abo and Quarai are impacted by several features and activities, Gran Quivira is largely pristine especially to the</p>

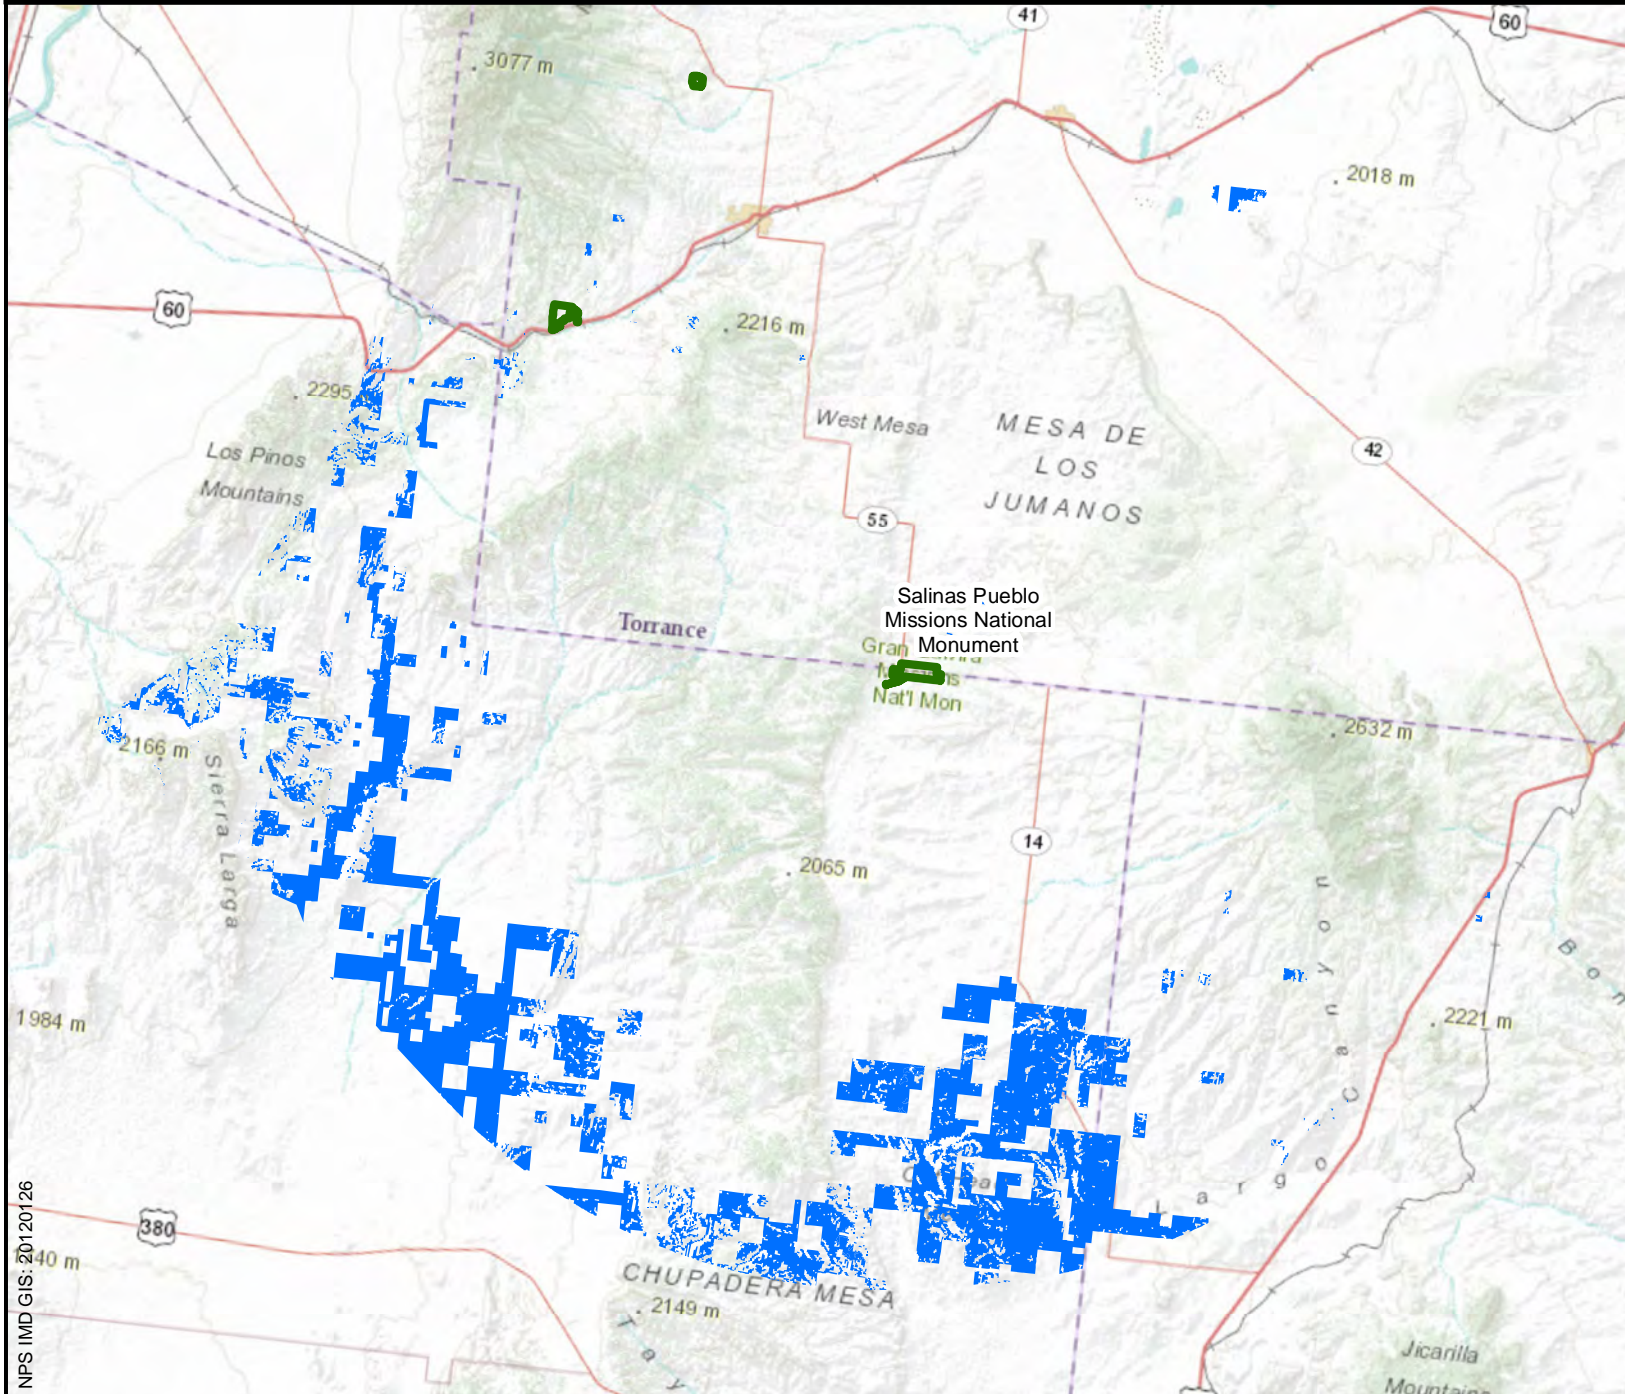

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>south, the west, and the east. Some visual impacts currently exist to the north of Gran Quivira, although these impacts are not particularly severe, with the exception of the High Lonesome Wind Farm near Willard. The park wishes to preserve the existing viewshed to south, west and east of Gran Quivira with no additional impacts (approximate line-of-sight variation shown on map). The park requests that all new construction on variance lands potentially impacting all 3 site units (Abo, Gran Quivira and Quarai) be limited to construction features that are below the current horizon field-of-view from the highest elevations within each unit.</p> <p>The park requests exclusion of visible variance lands for utility scale solar developments within 25 miles of the Gran Quivira Unit.</p> <p>References: In the Midst of a Loneliness: The Architectural History of the Salinas Missions, NPS 1988 Abo Cultural Landscapes Inventory, 2002 Quarai Cultural Landscapes Inventory, 2002 Gran Quivira Unit Cultural Landscapes Inventory, UNM 2010 Salinas Pueblo Missions National Monument Resources Management Plan, 1997 Land Protection Plan, 1984 Establishing Legislation P.L. 96-550, Dec. 19, 1980, Title VI Salinas National Monument (Now Salinas Pueblo Missions National Monument).</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: White Sands NM (WWSA)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	WWSA_1	<p>Variance lands on Wind Erodibility Group 1 and 2 soils lie east and southeast of the park. These lands are particularly close to the park’s eastern boundary; both in immediate proximity and extending to approximately 10 miles from the park. Soils and fine particles that are derived from winds during the construction and long term operation of utility scale solar developments on would potentially affect visitor experience at the park. Wind erosion and deposition of soils from these areas may affect air quality, pupfish habitat, and soil crust (due to increase sand movement or silt within streambed).</p> <p>The park requests that Wind Erodibility Group 1 and 2 lands 10 miles from the park’s eastern boundary are excluded.</p>
Wetlands	WWSA_3	<p>The monument is composed of playa lakes, water corridors, and cottonwood groves. There are many wetland areas that were not included within the USFWS data maps, this includes Raptor Lake (Lake Holloman, Lost river wetlands, salt pond, mound spring, and Malpais springs. Please refer to uploaded water data layer (LCDO_HY). If declines in groundwater close to these wetlands occur due to utility scale solar developments bird habitat and wetland function could be reduced.</p> <p>Utility-scale solar development on variance lands northeast and east of the park may reduce groundwater levels than those lands should be excluded. The park cannot identify the groundwater reduction potential based upon the programmatic nature of the Solar PEIS. The park requests variance lands northeast and east of the park are excluded out to 25 miles for the protection of the wetland resource.</p> <p>Many of the national bird plans list important species and habitats within and adjacent to the monument. These plans include the North American Waterfowl Management Plan (NAWMP), Intermountain West Joint Venture (IWJV) Plan, the New Mexico Partners in Flight (NMPIF) Conservation Plan, U.S. Shorebird Conservation Plan, Intermountain West Regional Shorebird Plan and Partners in Flight, Arizona-New Mexico Mountains Ecological Conservation Plan (TNC), Colorado Plateau Ecoregional Conservation Plan (TNC), and the Southern Rocky</p>

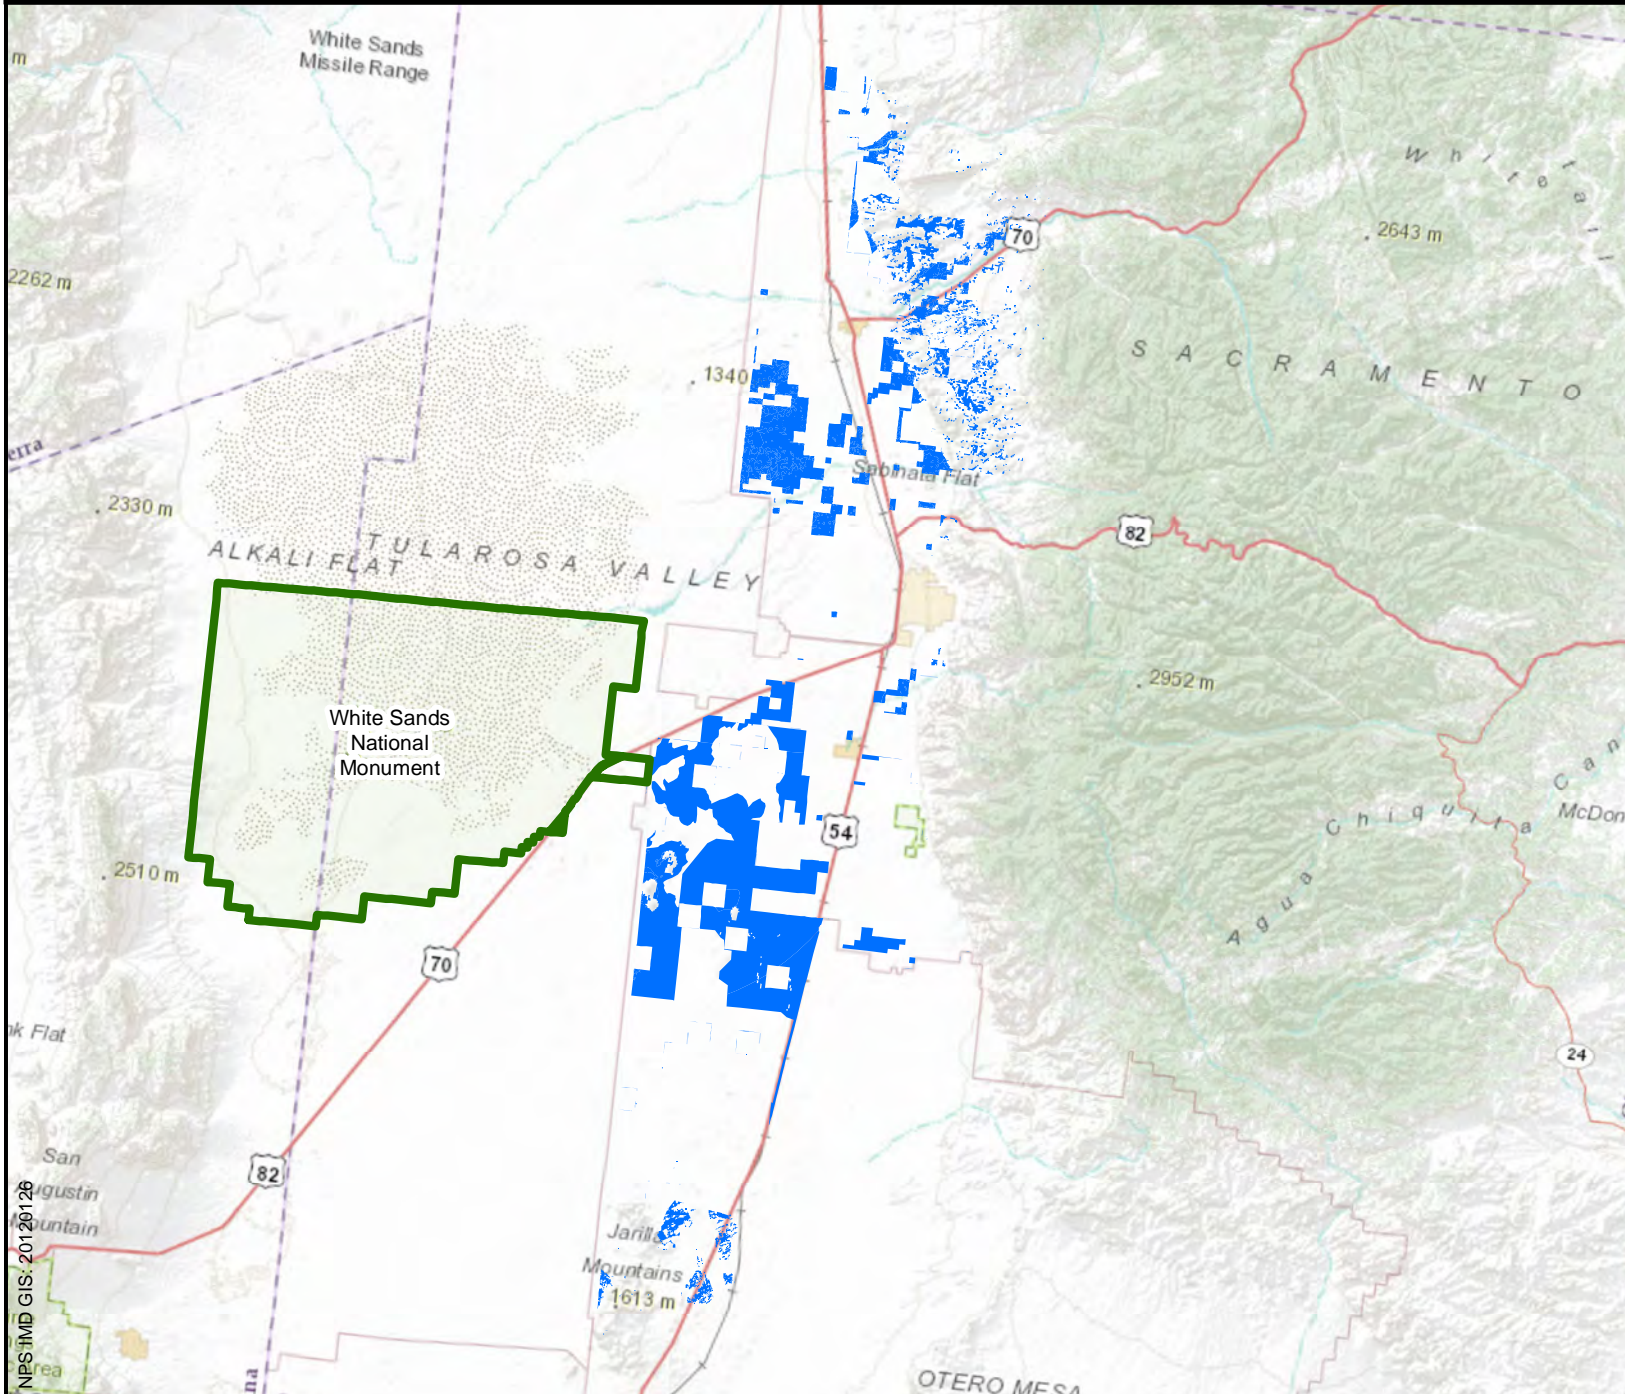

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>Mountains Ecoregional Conservation Plan (TNC).</p> <p style="text-align: center;">Additional Water Resources Comments</p> <p>The interaction between the perched water table beneath the dunes and the regional water table is not well known, but a general model would be helpful for considering potential effects from water withdraws. The region of groundwater pumping along the eastern side of the Tularosa Basin from Tularosa to the Boles Acres has shown drastic changes in water levels over the last 60 years: rapid water-level decline from heavy pumping during drought periods, and rapid water-level rise from recharge events during periods of above –average precipitation (this was described by Shomaker and Associates, Inc. as part of the White Sands National Monument Inventory Report). The water- level contour intervals provide information on the direction of groundwater flow; this information could be helpful in considering the effect of water withdraws on adjacent lands. The interaction between the perched water table beneath the dunes and the regional water table is not well known, but a general model would be helpful for considering potential effects from water withdraws. Further lowering of groundwater levels would be anticipated if utility scale solar developments use substantial water for cleaning and/or cooling purposes.</p>
Upstream Watersheds	WHSA_4	<p>Lost River provides habitat for a state listed pupfish, it is the only stream that flows into the monument, and it is believed to bring water into the shallow aquifer that stabilizes the dune system. Based upon initial evaluations of water levels and groundwater interaction with surface water, the park requests that the groundwater resource (and the presumed surface expression of groundwater in the Lost River) be protected. The park recommends the exclusion of variance lands northeast and east out to 25 miles from the park’s east boundary.</p>
Nighttime Lights	WHSA_10	<p>Extensive variance lands east-southeast of the park are within the views to night skies for visitors. The park requests that variance lands east-southeast from the park’s eastern boundary (approximately 12 miles out from the park’s boundary and in a north-south alignment extending for 14 miles), and between the significant light sources of Alamagordo and one smaller town further to the southeast be excluded</p>
Viewshed	WHSA_11	<p>The variance lands trending north to south for approximately 45 miles and located immediately adjacent to the park and also extending out to more than 20 miles from the park within the Tularosa Basin are within the park’s viewshed. This viewshed would be adversely impacted by utility scale solar developments on variance lands at the north end of the Tularosa Basin and from developments located in the southern portion of the basin. Variance lands immediately east of the park in the basin do not pose potential conflicts with the park’s visual resource.</p>

Solar Energy Development in Six Southwestern States**

Park Name: Arches NP (ARCH)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	ARCH_1	<p>Large blocks of BLM's variance lands occur on soils with high wind erodibility directly upwind of Class I airsheds associated with both Canyonlands and Arches National Parks. Development-related disturbance of upwind wind-erodible soils has the potential to exacerbate dust emissions and adversely impact visibility and other environmental attributes far downwind. Monitoring data collected by NPS (Perkins 2010) and academic researchers (see http://moab.colorado.edu/TSP.html) at the Island in the Sky district of Canyonlands demonstrate patterns in dust concentrations and related declines in visibility. In addition, numerous recent publications document the downwind significance of dust emissions from low-elevation drylands (selection of citations below). We recommend that BLM reclassify lands in NRCS wind-erodibility groups 1 and 2 west / southwest / upwind of CANY and ARCH as exclusion areas in the Solar PEIS. [See additional GIS shapefile derived from intersection of BLM Solar PEIS with Henry Mtns soil survey, Utah soil survey area UT631, blm_development_alternative_clip_soil.shp.]</p> <p>References: Field, J. Solar Energy Development in Six Southwestern States**

Park Name: Bryce Canyon NP (BRCA)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	BRCA_1	<p>Bryce Canyon National Park and nearby Zion and Capitol Reef National Parks are Class I areas under the Clean Air Act, indicating that no significant degradation of air quality should be permitted under federally proposed actions. Due to the overlap of HSL with wind erosion sensitive soil (Wind Erosion Group 1) in areas within 25 miles of the park (to the southwest), dust generation would likely negatively impact air quality standards for the park in the form of particulate matter increase and visibility degradation (Wind Erosion sensitive soil criteria were obtained from BLM Rapid Ecological Assessments for the Mojave Basin and Range). The extent of the impact cannot be currently quantified as no planned development exists for that area. The park requests that variance lands southwest of the park on erodibility soils group 1 be excluded within 15 miles of the park boundary</p> <p>Field, J. P., J. Belnap, D. D. Breshears, J. C. Neff, G. S. Okin, J. J. Whicker, T. H. Painter, S. Ravi, M. C. Reheis, and R. L. Reynolds. 2010. The ecology of dust. <i>Frontiers in Ecology and the Environment</i> 8:423–430. Neff, J. C., A. P. Ballantyne, G. L. Farmer, N. M. Mahowald, J. L. Conroy, C. C. Landry, J. T. Overpeck, T. H. Painter, C. R. Lawrence, and R. L. Reynolds. 2008. Increasing aeolian dust deposition in the western United States linked to human activity. <i>Nature Geoscience</i> 1:189-195.</p> <p>Okin, G. S., J. E. Bullard, R. L. Reynolds, J.-A. C. Ballantine, K. Schepanski, M. C. Todd, J. Belnap, M. C. Baddock, T. E. Gill, and M. E. Miller. 2011. Dust: Small-scale processes with global consequences. <i>EOS, Transactions, American Geophysical Union</i> 92:241-248.</p>
Critical Habitat	BRCA_6	<p>Several parcels of variance lands are located east (approximately 4 miles) of the park closely associated with critical habitat for the Mexican spotted owl. While the critical habitat only adjoins the park in one location at the park’s northern end, the development of utility scale solar facilities immediately adjacent to said habitat could impair and impact habitat during construction and long term operation of the facility. The park requests variance lands located 3-7 miles east of the park be excluded from development for reasons of the critical habitat.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

<p>Nighttime Lights</p>	<p>BRCA_10</p>	<p>The park lies on the western edge of the Colorado Plateau, one of the last areas of natural night skies one can view in the contiguous United States. In an expanding survey of 45 park units, the park ranks in the top five in night sky quality. Night sky quality is principally degraded by light pollution — emissions from outdoor lights that cause direct glare and reduce the contrast of the night sky — but atmospheric clarity also plays a role.</p> <p>The combination of clear air (free of aerosols and water vapor that reduce visibility), high elevation, and a sparse human population in the immediate vicinity of the park results in a view of the night sky that is near pristine as well as vulnerable. Photometric measurements taken within the park show that zenith sky condition is virtually unaltered, attaining the theoretical natural darkness of 21.95 magnitudes per square arc-second at Yovimpa Point (the darkest location in the park). The park has collected precise data on night sky brightness and existing light pollution from Yovimpa Point in the south portion of the park, as well as Bryce Point and Inspiration Point in the northern portion. Data collected at Cedar Breaks and Zion compliment the Bryce Canyon data.</p> <p>The night skies of the park are a popular attribute of the park, sought by thousands of park visitors each year. Ranger-led stargazing programs are extremely well attended, and the park is known nationwide for this aspect. Additionally, the Director of the National Park Service has recently put forth a “Call to Action” as a guidance document to prepare the NPS for a second century of stewardship and engagement in anticipation of the upcoming Centennial celebration in 2016. Action number 27: “Starry, Starry Night”, directs the NPS to “lead the way in protecting natural darkness as a precious resource and create a model for dark sky protection by establishing America’s first Dark Sky Cooperative on the Colorado Plateau in collaboration with other federal agencies, partners, and local communities.” The area surrounding Bryce Canyon National Park is integral to this effort and is a priority conservation item for the park.</p> <p>Light intrusion of any form is a detriment to dark skies preservation. Specific visual impacts of solar facilities would include high contrast with surrounding, undeveloped areas, glint and glare, plumes of dust or steam, and presence of night lighting (DEIS, 5-9). Night lighting could also disturb wildlife in the solar energy project area. Lights directly attract migratory birds (particularly in inclement weather and during low-visibility conditions), and they can indirectly attract birds and bats by attracting flying insects. Attraction to lights can result in birds colliding with structures (DEIS, 5-82). Depending on mitigation proposed in site-specific Lighting Plans, light intrusions may be reduced to some degree on utility-scale solar development; however,</p>
------------------------------------	-----------------------	---

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>lighting levels would be determined based on “safety and security” of the facility and its workers and any level of light pollution for large-acreage development in combination with reflective surfaces and hazard navigation lighting would degrade the dark sky condition at and surrounding the park. Similarly, small scale photo-voltaic systems could degrade the dark skies surrounding the park and any solar energy applications for smaller parcel developments in the region of Bryce Canyon National Park should be carefully analyzed for impacts to viewshed and night skies. Concerns over night sky preservation extend to the protection of wilderness character, the “naturalness index” (Theobald, 2010), landscape permeability and nocturnal wildlife protection for the park and the surrounding region.</p> <p>The park requests the exclusion of all variance lands within 25 miles of the park’s boundary for this resource.</p>
<p>Viewshed</p>	<p>BRCA_11</p>	<p>Bryce Canyon National Park and nearby Zion and Capitol Reef National Parks are Class I areas under the Clean Air Act, indicating that no significant degradation of air quality should be permitted under federally proposed actions. Based on a preliminary Composite Viewsheds analysis by the National Park Service, several variance lands would be visible from the southern end of the park and could negatively impact the landscape from key observation points (Yovimpa and Rainbow Points) in the park. The cumulative impact of utility-scale solar energy development and area coal mining could significantly impact air quality standards and viewshed protection for the park and the surrounding landscape.</p> <p>The park recommends the exclusion of variance lands visible from the park out to 20 miles from the park’s boundary.</p>
		<p style="text-align: center;">Additional Background Comments</p> <p>Several additional concerns related to impacts to the park and the surrounding landscape from utility-scale (or smaller), solar energy development exist. These include the following:</p> <ol style="list-style-type: none"> 1. protection of wildlife migration corridors (especially large mammals moving onto and off of the Colorado Plateau during the spring and fall using corridors to the south of the park); 2. habitat degradation including the introduction and spread of non-native plant species; 3. sensitive and listed species (greater sage grouse leks and Utah prairie dog colonies are located in parcels to the southwest of the park on private and federal land and may occur within identified HSL parcels);

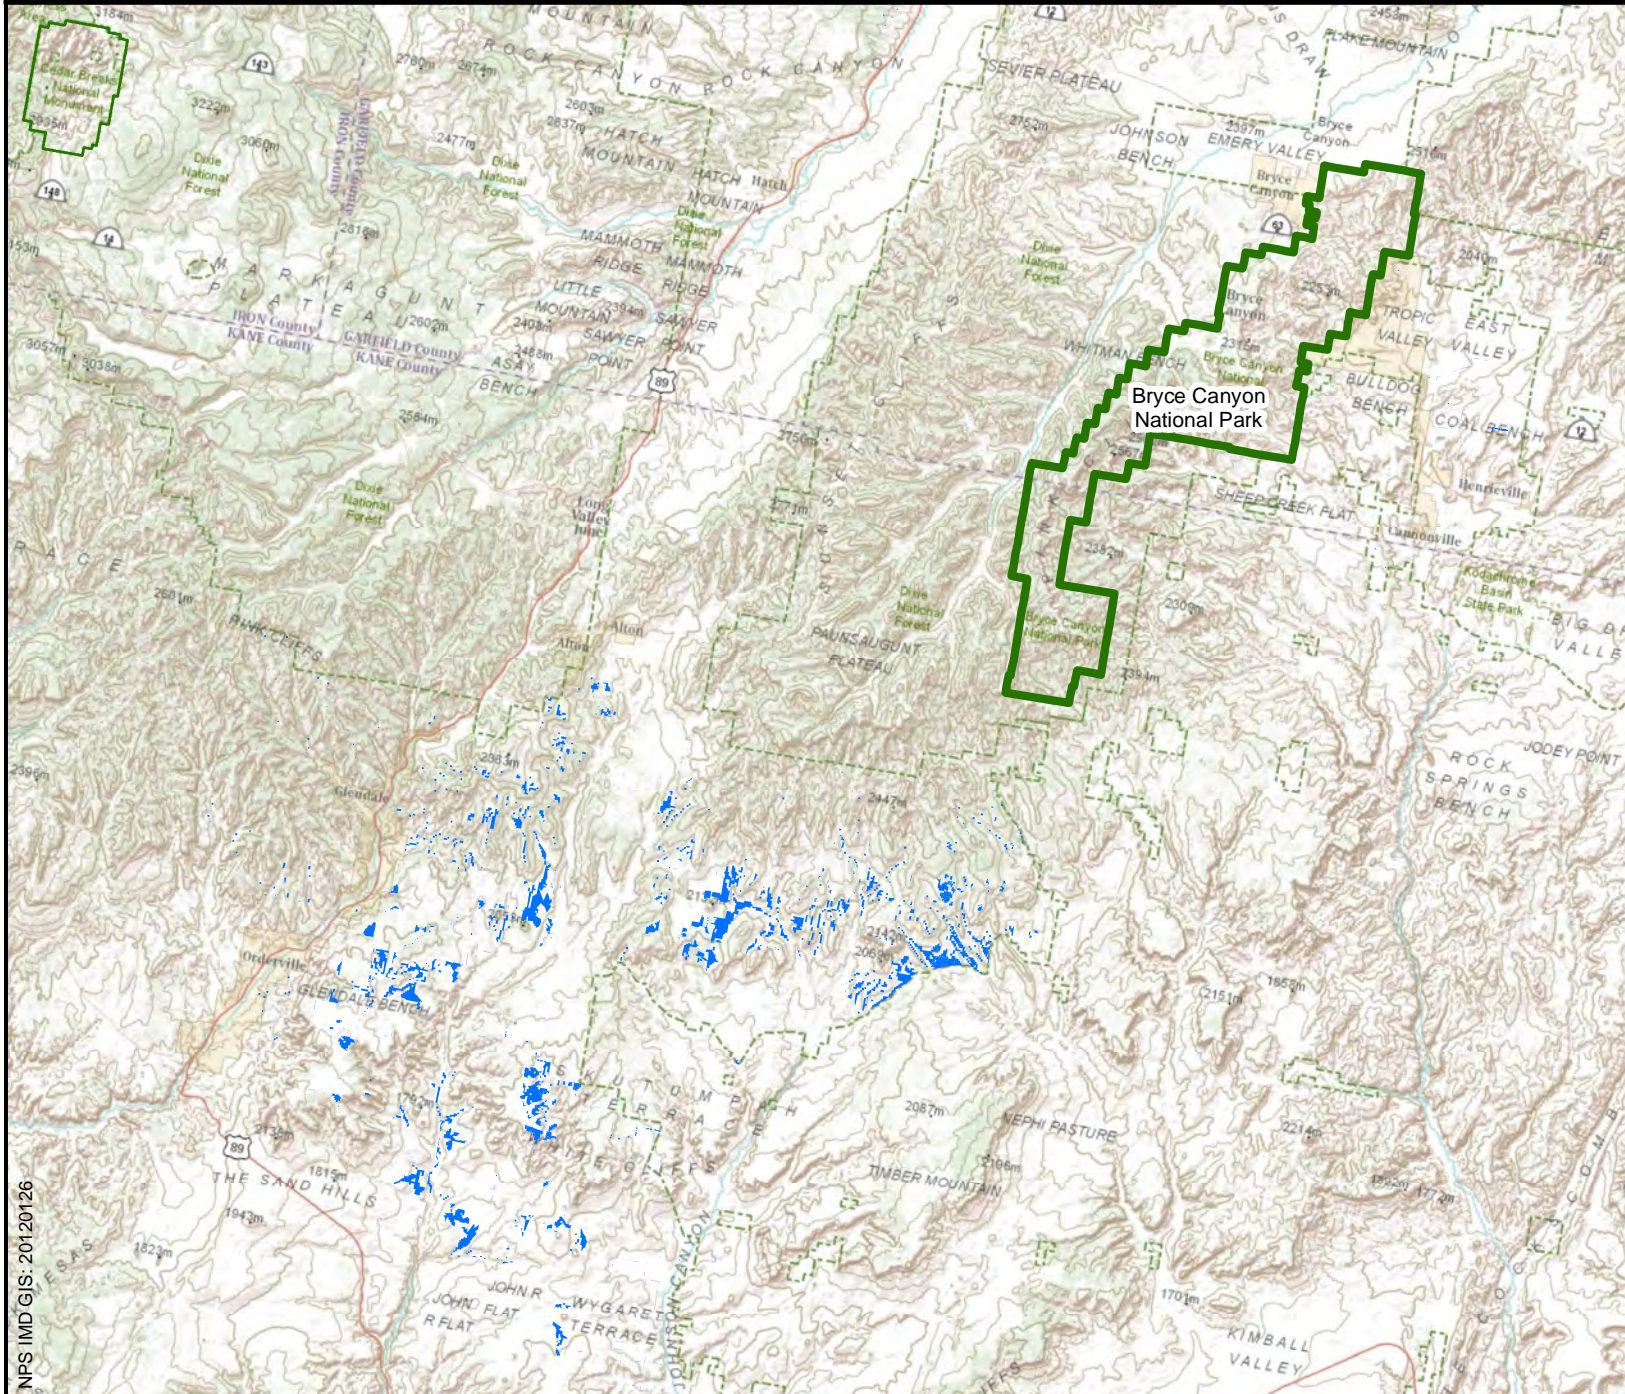

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<p>4. lack of infrastructure required to construct and sustain solar energy facilities including road construction and transmission infrastructure (e.g., in the area surrounding Bryce Canyon, transmission with existing capacity and substations are not currently available or would require upgrades that outweigh the economic benefit of utility scale solar development). The impact on landscapes due to transmission upgrades or construction may be greater than development of utility-scale solar energy sites and would need to be analyzed on a case-by-case basis;</p> <p>5. economic infeasibility of constructing solar energy sites due to transmission constraints (local power companies are exceeding current capacity and additional power sources would likely not be able to tie into existing transmission lines without expensive upgrades). Table G-1 does not list any available HSL in the Kanab Field Office as being “constrained” by a lack of transmission line infrastructure. This table is misleading and possibly incorrect based on the current exceedance of capacity on transmission lines in the region (refer to Tropic to Hatch 138 KV Transmission Line Project, Final EIS);</p> <p>6. incompatibility of land uses (including conflicts of solar development projects next to large-scale coal mining near the town of Alton); and</p> <p>7. cumulative impacts on the park from other activities (logging, proposed oil and gas leasing, coal mining, residential expansion throughout the region). These factors singly may not substantially degrade park or regional resources, but cumulatively could greatly impact natural resources, the landscape surrounding the park, and the visitor experience at Bryce Canyon. Based on the BLM “Proposed Identification Protocol for New Solar Energy Zones” (Appendix D, al DEIS), the HSL parcels surrounding Bryce Canyon National Park would likely not meet the criteria to be considered for future inclusion as a SEZ with the two primary constraints being (1) a lack of demand in the area, and (2) the technical and economic infeasibility of constructing a SEZ in the region. The HSL parcels currently included in the PEIS surrounding the park should be excluded based on those criteria for consideration for future SEZ development. The park understands that smaller scale solar development in those parcels remains possible and resource impact concerns, even for small scale solar development, are summarized above. Bryce Canyon National Park would appreciate early notification by and cooperation with the Utah BLM Renewable Energy Program related to any development of solar energy facilities within 25 miles of the park’s border consistent with the BLM’s existing regulations and policies (e.g., IM 2011-060 and IM 2011-061), and with current interagency coordination practices with DOI agencies.</p>

Solar Energy Development in Six Southwestern States**

Park Name: Canyonlands NP (CANY)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	CANY_1	<p>Large blocks of variance areas occur on soils with high wind erodibility directly upwind of Class I airsheds associated with both Canyonlands and Arches National Parks. Development-related disturbance of upwind wind-erodible soils has the potential to exacerbate dust emissions and adversely impact visibility and other environmental attributes far downwind. Monitoring data collected by NPS (Perkins 2010) and academic researchers (see http://moab.colorado.edu/TSP.html) at the Island in the Sky district of Canyonlands demonstrate patterns in dust concentrations and related declines in visibility. In addition, numerous recent publications document the downwind significance of dust emissions from low-elevation drylands (selection of citations below). We recommend that BLM reclassify lands in NRCS wind-erodibility groups 1 and 2 west / southwest / upwind of CANY and ARCH as exclusion areas in the Solar PEIS. [See additional GIS shapefile derived from intersection of BLM Solar PEIS with Henry Mtns soil survey, Utah soil survey area UT631, <code>blm_development_alternative_clip_soil.shp</code>.]</p> <p>References: Field, J. **Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

		<i>Natural Resource Report NPS/NRPC/ARD/NRR—2009/151</i>
Nighttime Lights	CANY_10	Canyonlands NP has significant night sky resources north, south and west of the park. There are also such resources to the east in alignment with an existing night sky light source. The lands west of the park are particularly valuable, as there are no other light sources in that area. NPS requests that 10-20 miles west is a reasonable exclusion area to protect the sensitive light resources.
Cultural Resources	CANY_Cultural Landscape	<p>Cultural landscape map is provided showing boundaries of Robbers Roost/Under the Ledge Ranches Cultural Landscape Inventory (CLI). This area is a large, historic vernacular landscape that encompasses over 900 square miles in southeast Utah that overlap some of the v areas for solar development. The cultural landscape includes deep canyons, wide open flats, juniper and pinion forest, sand dunes, and desert scrub country, between 5000-7000 feet of elevation, that were used as hardscrabble ranchland for four local families for approximately 100 years. Specific features include numerous brush corrals (corrals created using stacked juniper and pinion trees), spring sites, trails, and remnants of family ranching camps. Resources within the cultural landscape boundary are significant under Criterion A for subsistence ranching and exploration/settlement, Criterion C for vernacular architecture, and Criterion D for archeological resources. The integrity of many of the landscape features remain, though time and the elements have taken their toll on a number of sites, leaving them in a ruinous state. Today, the area is essentially an archeological district.</p> <p>A Determination of Eligibility has been drafted for the cultural landscape and its resources as part of the Robbers Roost/Under the Ledge Ranches Cultural Landscape Inventory (CLI). The CLI project has been a successful partnership between the NPS and BLM to identify and document hard-scrabble, subsistence ranching features unique to Utah. The State Historic Preservation Office (SHPO) has confirmed that these resources are one-of-a-kind and should also be nominated to the National Register. The CLI and Determination of Eligibility is the first step toward drafting a Multiple Property Nomination to list the landscape and its resources on the National Register of Historic Places. As of December 2011, the CLI was in the process of being finalized. The document and Determination of Eligibility will be put forth for SHPO concurrence in early 2012.</p>

Solar Energy Development in Six Southwestern States**

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	CARE_1	<p>A large amount of soils in the wind erodibility group 2 lie east of the southern end of the park. Within that area there are significant amounts of variance lands presented for potential utility scale solar developments. While the predominant wind direction is away from the park towards Glen Canyon National Recreation Area, winds that periodically blow from the east could carry soils and fine particles from the solar development construction and operations.</p> <p>Air Quality in National Parks 2008 Annual Performance & Progress Report, Natural Resource Report NPS/NRPC/ARD/NRR—2009/151</p> <p>Capitol Reef National Park is a Class 1 airshed under the Clean Air Act, requiring affirmative actions by NPS to prevent degradation of the air quality. Wind derived soils can decrease visibility in the park and be measured by current monitoring. Deposition of wind eroded soils can affect plant and animal communities as well as eventually be eroded by water and affect riparian and watercourses in the park.</p> <p>The park requests that variance lands south east of the park on erodibility soils group 2 be excluded. Within 15 miles of the park boundary</p> <p>Field, J. P., J. Belnap, D. D. Breshears, J. C. Neff, G. S. Okin, J. J. Whicker, T. H. Painter, S. Ravi, M. C. Reheis, and R. L. Reynolds. 2010. The ecology of dust. <i>Frontiers in Ecology and the Environment</i> 8:423–430. Neff, J. C., A. P. Ballantyne, G. L. Farmer, N. M. Mahowald, J. L. Conroy, C. C. Landry, J. T. Overpeck, T. H. Painter, C. R. Lawrence, and R. L. Reynolds. 2008. Increasing eolian dust deposition in the western United States linked to human activity. <i>Nature Geoscience</i> 1:189-195.</p> <p>Okin, G. S., J. E. Bullard, R. L. Reynolds, J.-A. C. Ballantine, K. Schepanski, M. C. Todd, J. Belnap, M. C. Baddock, T. E. Gill, and M. E. Miller. 2011. Dust: Small-scale processes with global consequences. <i>EOS, Transactions, American Geophysical Union</i> 92:241-248.</p>
Protected Areas	CARE_5	<p>Three areas of variance lands east of the park are bordering or in close proximity to protected areas outside of the park. There are significant portions of those same protected lands that connect into and throughout the park. The park requests the three areas that lie 10 miles from the park’s boundary be excluded from potential utility scale solar developments because of potential disturbance both during construction and operation of said facilities. Capitol Reef National Park General Management Plan and Environmental Impact Statement, Record of Decision signed 2001</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

<p>Critical Habitat</p>	<p>CARE_6</p>	<p>The park has extensive lands within and nearby their boundary that possess critical habitat for the Mexican Spotted Owl (approximately 5 miles outside the eastern park boundary). Many of the variance lands within the park’s area of analysis are immediately adjacent or bordering these critical habitat areas. These critical habitats and endangered species could be impacted by utility scale solar facilities both during their construction and during the facility’s operation. The park requests that variance lands within one mile of the critical habitat boundaries and also within the 25 mile park’s area of analysis be excluded.</p> <p>Reference: Capitol Reef National Park General Management Plan and Environmental Impact Statement, Record of Decision signed 2001)</p>
<p>Roadless Areas</p>	<p>CARE_7</p>	<p>Many of the variance lands on the east side of the park are in largely roadless natural areas. Based upon that classification, the park requests such lands be excluded if they are in the roadless natural area designated lands within 10 miles of the park boundary. Newly disturbed land from a large constructed facility from access and construction roads could open up additional natural areas to human disturbance, thus potentially affecting critical habitat, erodible soils and invasive plants; all potentially affecting the park.</p>
<p>Naturalness Index</p>	<p>CARE_8</p>	<p>The peaceful settings of the park provide the opportunity to experience natural quiet, which conveys a mood of solitude and enhances visitor experience. As development occurs near the park's boundary, there is an increased likelihood for wilderness and natural soundscapes to be threatened. Excessive noise from solar operations and related traffic could create a potentially unacceptable impact on this important park resource. One particular area of variance lands threaten this resource.</p> <p>The park requests that variance lands immediately east of the southernmost portion of the park be excluded.</p>
<p>Nighttime Lights</p>	<p>CARE_10</p>	<p>The ability to have a clear view of the night sky in the absence of artificial lighting is a valuable resource that is often overlooked. Capitol Reef National park is fortunate to be located in some of the best areas in North America for night sky viewing. The facility lighting necessary for operating a solar facility would be expected to seriously change the existing night sky resource, and is unlikely to be effectively mitigated. Preserving dark skies, and the feeling of isolation provided by a nighttime view with large areas lacking in artificial light sources, would be difficult if not impossible in the face of solar development on these lands. Based upon the night sky resource on the Colorado Plateau, the park requests such variance lands east of the park be excluded within 25 miles of the park boundary.</p>

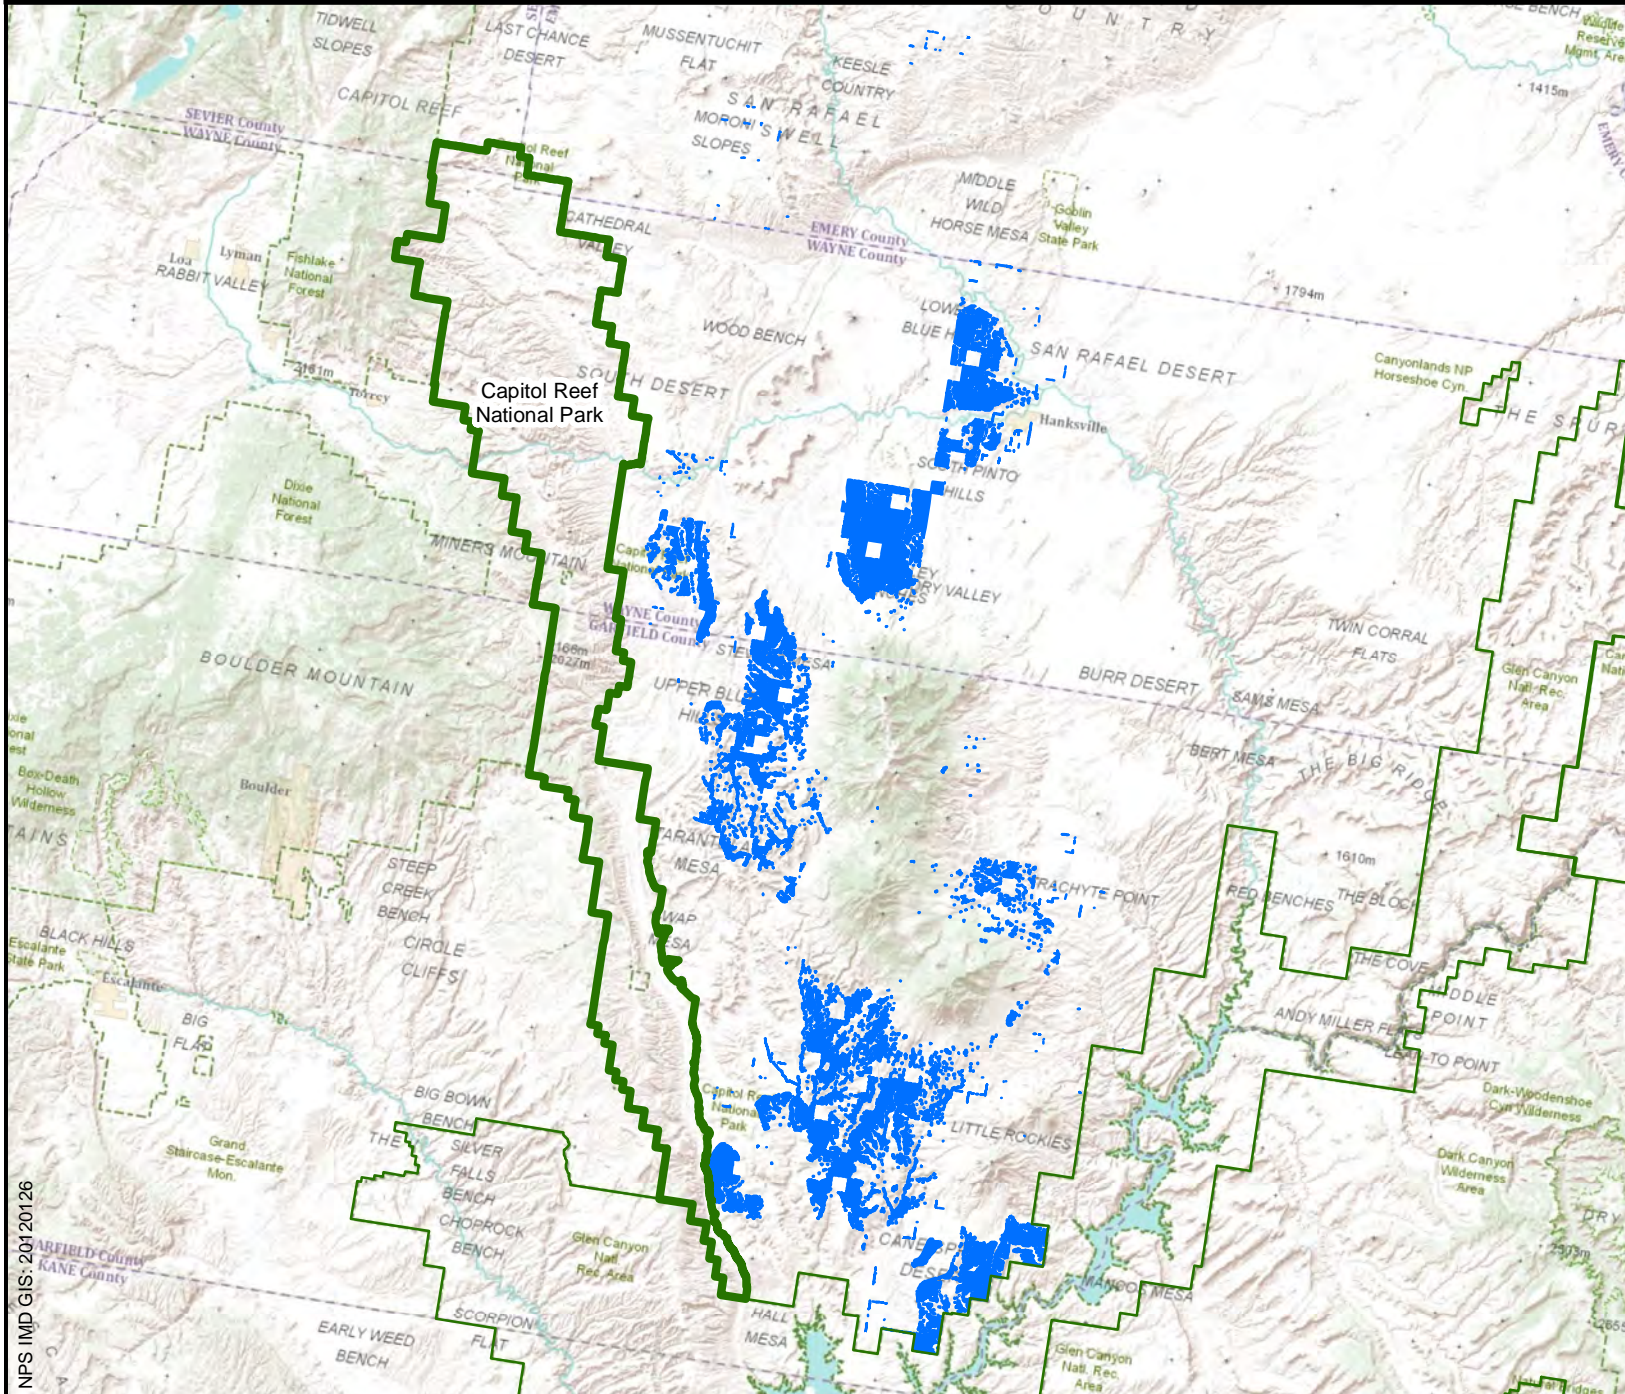

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Viewshed	CARE_11	East of the park, many variance lands are visible from numerous KOPs in the park, and several lie within lands that the park has determined to have high visual sensitivity. Further, most of the viewshed in these areas of potential development show little evidence of human activity. Views outside of the park are integral to the views within the park, and together provide a pastoral panorama. Solar facilities constructed on the areas visible from the park would potentially have a significant impact upon visual resources. The park requests that exclusion of variance lands approximately 13 miles east of the park boundary that are visible from KOPs within the park.

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Cedar Breaks NM (CEBR)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Nighttime Lights	CEBR_10	Dark night sky is a wilderness character that the park is trying to preserve for visitors. Nighttime operations and Security lights on energy installations would have a potential impact on dark night sky and aesthetic values at the park. We recommend that variance lands in an area approximately 12 miles wide extending southeast of the park 25 miles be excluded from energy development to preserve the night sky darkness and the naturally dark vistas. Some of these variance lands are the same lands that Bryce Canyon NP and Zion NPs are requesting for exclusion and for the same “nighttime lights” reason.
Viewshed	CEBR_10	There are several variance lands 18-20 miles west-northwest of the park that are visible from KOPs in the park. No exclusions are sought for these.

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Glen Canyon NRA (GLCA) Note: Recommended exclusions for this park are located in Utah only, none reported in Arizona portion of the park.

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	GLCA_1	<p>During site clearing a considerable amount of dust would be eroded and carried into the air. After construction, the high winds frequently experienced on the Colorado Plateau (especially during the spring season), could create significant dust plumes from the cleared ground, facility operations areas, and unpaved access roads. Soils and particulate matter would blow into and adjoining the park, affecting visitor experience and certain plant and animal habitats within the park.</p> <p>Large portions of the variance lands within the AOA surrounding GLCA are classified as either Wind Erodibility 1. or 2. The park requests that all of such lands be excluded</p>
Water Erodibility	GLCA_2	<p>At the scale of resource mapping available and the lack of specific design of any of the solar facilities, the park continues to be concerned that large utility scale development (including roads) poses potential impacts to the park from eroded soils and sedimentation. The park requests that variance lands within 0.5 mile of the high water erosion potential areas and within the AOA be excluded.</p>
Protected Areas	GLCA_5	<p>The variance lands Wilson’s Mesa should be proposed for exclusion based on the park’s GMP managing that area as wilderness and the 1980 Wilderness Recommendation</p>
Critical Habitat	GLCA_6	<p>The park has extensive lands within and nearby their boundary that possess critical habitat for the Mexican Spotted Owl (up to and beyond even 20 miles in some areas), and extensive riparian and river miles critical habitat(approximately 50 miles) along the upper portions of the park (the Colorado River and portions of the Little Colorado River) for the endangered Colorado pikeminnow, boneytail chub, humpback chub, razorback sucker, and the Navajo sedge. Many of the BLM V lands within the park’s area of analysis are immediately adjacent or bordering these critical habitat areas. These critical habitats and endangered species could be impacted by utility scale solar facilities both during their construction and during the facility’s operation. The park requests that variance lands within one mile of the critical habitat boundaries and also within the 25 mile park’s area of analysis be excluded.</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

<p>Roadless Areas</p>	<p>GLCA_7</p>	<p>Many of the variance lands surrounding the park are in largely roadless natural areas. Based upon that classification, the park requests such variance lands be excluded if they are in the roadless natural area designated lands within 10 miles of the park boundary. Newly disturbed land from a large constructed facility from access and construction roads could open up additional natural areas to human disturbance, thus potentially affecting critical habitat, erodible soils and invasive plants; all potentially affecting the park. The areas proposed for any solar facility development near Wilson’s mesa should be proposed for exclusion based on GLCA’s GMP managing that area as wilderness and the 1980 Wilderness Recommendation.</p>
<p>Nighttime Lights</p>	<p>GLCA_10</p>	<p>The park has concerns about the nighttime light that would be associated with the operation of a utility scale solar development within views on the variance lands west, north and east of the middle section of the park (park lands longitudinal along the Colorado River). We ask that lands be excluded at least 10 miles out from the park boundary to reduce potential impacts. Certain remote areas identified for development to the east of the Waterpocket Fold in CARE can also be seen from GLCA (northern portions of the fold) where it joins with CARE. The park includes those areas as critical potential for nighttime light impacts to the park visitors and such variance lands should also be excluded.</p>
<p>Cultural Landscapes</p>	<p>GLCA_Cultural Landscape</p>	<p>Cultural landscape map is provided showing boundaries of Robbers Roost/Under the Ledge Ranches Cultural Landscape Inventory (CLI). This area is a large, historic vernacular landscape that encompasses over 900 square miles in southeast Utah that overlap some of the variance areas for solar development. The cultural landscape includes deep canyons, wide open flats, juniper and pinion forest, sand dunes, and desert scrub country, between 5000-7000 feet of elevation, that were used as hardscrabble ranchland for four local families for approximately 100 years. Specific features include numerous brush corrals (corrals created using stacked juniper and pinion trees), spring sites, trails, and remnants of family ranching camps. Resources within the cultural landscape boundary are significant under Criterion A for subsistence ranching and exploration/settlement, Criterion C for vernacular architecture, and Criterion D for archeological resources. The integrity of many of the landscape features remain, though time and the elements have taken their toll on a number of sites, leaving them in a ruinous state. Today, the area is essentially an archeological district.</p> <p>A Determination of Eligibility has been drafted for the cultural landscape and its resources as part of the Robbers Roost/Under the Ledge Ranches Cultural Landscape Inventory (CLI). The CLI project has been a successful partnership between the NPS and BLM to identify and document</p>

Park Name: Hovenweep NM (HOVE) Note: Recommended exclusions for this park are located in Utah only, none reported for PEIS lands in Colorado near the park.

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Viewsheds	HOVE_11	<p>In the Solar PEIS, BLM has identified as exclusion areas all Utah lands in VRM classes 1, 2, and 3 based on current Utah BLM Resource Management Plans. However, NPS believes that mapped VRM classes in the vicinity of the park in Utah are in error, as lands near the park are classified as VRM Class 4 (see slide 1 in attached Reference PowerPoint) in contradiction with NPS management objectives related to the protection of visual resources. Considering that NPS believes that VRM classifications are incorrect, blocks of variance areas are near the boundary of HOVE and are within view of key observation points (KOPs; slides 1 and 2, Reference attached PowerPoint). NPS requests that BLM reclassify all areas within view of HOVE kops as exclusion areas because of potential resource conflicts related to scenic resources and dark night skies. Because of their close proximity to the Monument, these same areas also have high potential for resource conflicts attributable to development-related impacts on natural soundscapes and behavioral responses of wildlife. [See additional zipped GIS files HOVE_viewshed_10m.zip and HOVE_viewing_platforms.zip.] See attached PowerPoint file HOVE_VRM_Viewshed_11Dec11.pptx</p>

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

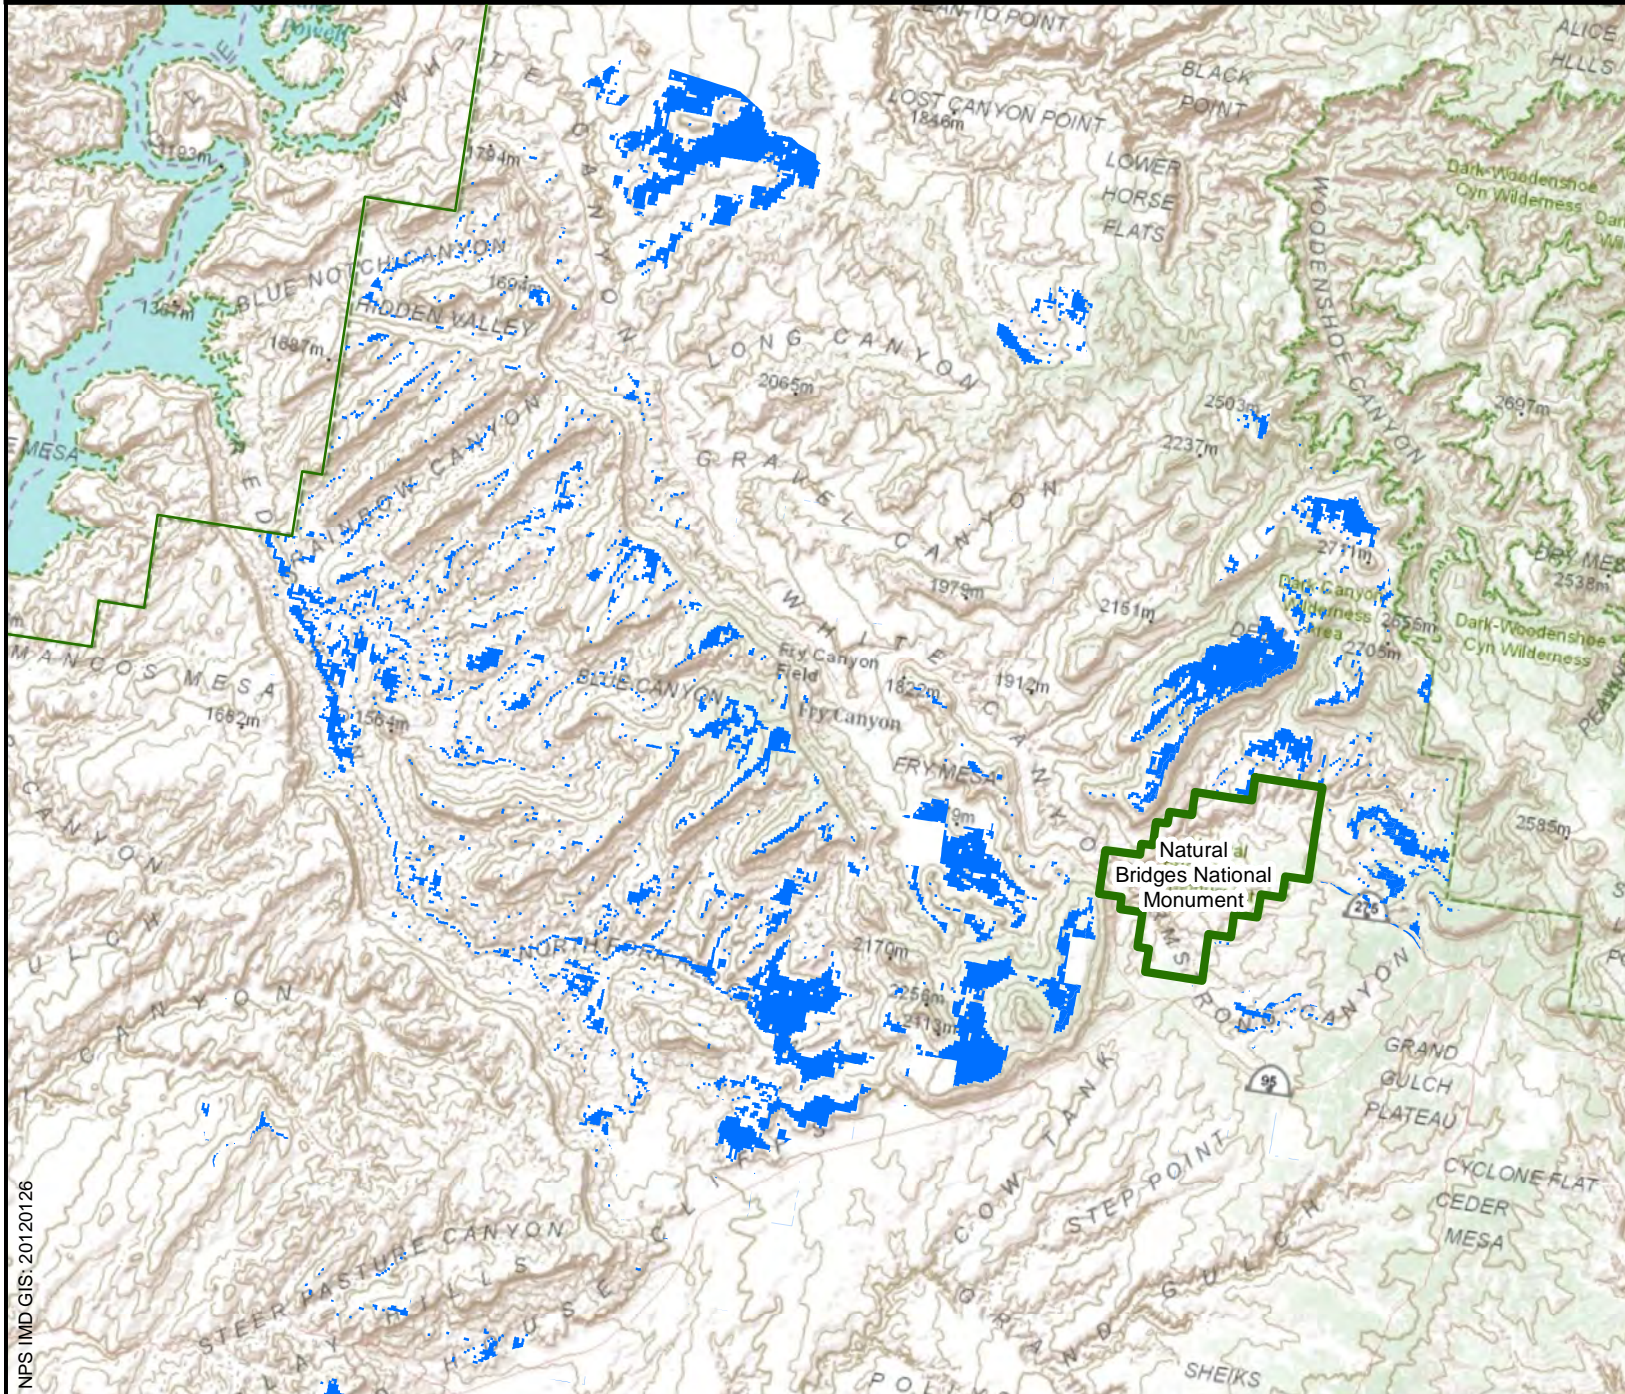

Park Name: Natural Bridges NM (NABR)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Nighttime Lights	NABR_10	The park has significant night sky resources north, south and west of the park. There are also such resources to the east in alignment with an existing night sky light source. The lands north and west of the park are particularly valuable, as there are no other light sources in that area. NPS requests that 10-20 miles west is a reasonable exclusion area to protect the sensitive light resources.
Viewsheds	NABR_11	In the Solar PEIS, BLM has identified as exclusion areas all lands in VRM classes 1, 2, and 3 based on current BLM Resource Management Plans. However, mapped VRM classes in the vicinity of Natural Bridges National Monument clearly appear to be erroneous, as lands directly adjoining and near the park entrance road and boundary are classified as VRM Class 4 (see slide 1 in attached PowerPoint) in contradiction with NPS management objectives related to the protection of visual resources. Considering that NPS believes that the VRM classifications are incorrect, significant blocks of variance areas are very near the boundary of NABR and are within clear view of key observation points (kops; slides 1 and 2, attached PowerPoint) BLM should reclassify all areas within view of NABR kops as exclusion areas because of potential resource conflicts related to scenic resources and dark night skies. Because of their close proximity to the Monument, these same areas also have high potential for resource conflicts attributable to development-related impacts on natural soundscapes and behavioral responses of wildlife. [See additional zipped GIS files NABR_kop_viewshed.zip and NABR_viewing_platforms_may2010.shp.zip.]

**Supplement to the Draft Programmatic Environmental Impact Statement:
Solar Energy Development in Six Southwestern States**

Park Name: Zion NP (ZION)

Resource of Concern	Spatial Reference ID #	Resource Conflict Justification
Wind Erodibility	ZION_1	<p>Large blocks of BLM's variance lands occur on soils with high wind erodibility to the east, south, west and northwest of the park. The park is a Class I airshed and the NPS has the affirmative responsibility to prevent degradation of the air quality within the park. Development-related disturbance of wind-erodible soils has the potential to exacerbate dust emissions and adversely impact visibility and other environmental attributes far downwind. Monitoring data collected by NPS (Perkins 2010) demonstrates patterns in dust concentrations and related declines in visibility. The park recommends excluding variance lands in wind erodibility groups 1 and 2, 15 miles east, south, west and northwest of the park in the Solar PEIS.</p> <p>References: Field, J. P., J. Belnap, D. Solar Energy Development in Six Southwestern States**

		<p>traffic, the park recommends these lands be excluded from potential utility scale solar energy development.</p> <p>Variance lands on Gooseberry Mesa to the southwest of the park are acclaimed BLM mountain bike recreation areas. The BLM office of renewable resources could confer with the office of outdoor recreation and comment back to NPS about the potential impacts/potential exclusions. Inclusion of these tracts for energy development would potentially be an incompatible use for mountain bike outdoor recreation we recommend that exclusions be considered. This area is also adjacent to the BLM Smithsonian Butte Scenic Backway, set aside for a 9-mile scenic drive that is much the same as when John Wesley Powell explored it in the late 1800s. We believe that a utility scale solar development would be incompatible with the scenic backway designation. We ask that these lands also be excluded from utility scale solar developments.</p>
Naturalness Index	ZION_8	<p>Variance lands to the southwest and southeast of the park are in areas with a high naturalness index and serve as alternate habitat and migration corridors for area wildlife and should be considered for exclusion from solar development.</p>
Nighttime Lights	ZION_10	<p>Dark night sky is a wilderness character that the park is trying to preserve for visitors to the Congressionally-designated the park a wilderness area. Nighttime operations and Security lights on energy installations would have a potentially significant impact on dark night sky and aesthetic values for wilderness users. The park recommends that variance lands in an area approximately 10 miles wide, centered on the Gooseberry Mesa area southwest of the park and 15 miles outside the park boundaries be excluded from energy development to preserve the night sky darkness and the naturally dark vistas from the southwest quadrant of the park. In addition, we request that variance lands both to the southeast of the park and northeast of the park indicated on the NPS mapping for the park and 15 miles from the park's boundary be excluded for the same reasons.</p>
Viewsheds	ZION_11	<p>Substantial areas of variance lands with high visibility from KOPs in the park would potentially negatively affect visitors to the park if utility scale solar developments were to occur in those areas. Hikers in the southwest quadrant of the park on the elevated plateau of the Chinle formation have unobstructed views to the southwest, as do the periodic hikers to the Mount Kinesava and West Temple area. Hikers that make the effort to climb to these areas within wilderness would potentially suffer impacts from highly reflective solar collecting apparatus. NPS requests that all variance lands with high visibility ratings surrounding the park 15 miles from the park's boundary be excluded.</p>

EIS Section	Page/Line	Comment/Suggested Revision	Action (for use by ANL)
Overall Comment #1		<p style="text-align: center;">COMMENTS ON THE SUPPLEMENT TO THE DRAFT PEIS</p> <p>The modified preferred Solar Energy Program proposes policies that encourage early consultation and communication with the NPS as an appropriate federal agency to address and remove projects having high potential for resource conflict with NPS-administered units. The consultation mechanisms built into the variance process should ensure that applications are discouraged and denied in locations inappropriate for utility-scale solar development. This is a positive step. The NPS believes that the principles incorporated in the process are intended to allow only the most environmentally appropriate projects move forward in the right-of-way process. We appreciate the effort to articulate a process based on the BLM's broad discretionary authority to ensure proper siting of projects that are consistent with the public interest, including the protection of parks and other special status areas under NPS management.</p>	
Overall Comment		<p>The modified preferred Solar Energy Program alternative provides an opportunity to further refine the exclusion of specific categories of land that are believed unsuitable</p>	

<p>#2</p>	<p>for utility-scale solar development. The NPS appreciates the opportunity that the Supplement affords cooperating agencies to proposed refinements to the proposed exclusions of land from the Solar Energy Program. As noted in the NPS comments on the Draft Solar PEIS, there are 53NPS units and five National Historic Trails in the six-state study area for the Solar PEIS. The preferred program alternative identifies a reduced number of SEZs near national park units, but the lands available under the alternative for development outside SEZs and near NPS units, including NHTs, is substantial. The NPS, as explained further in these comments, requests that additional lands near NPS units be excluded from the Solar Energy Program. We believe this input represents a good-faith effort to further refinement of the Solar Energy Program.</p>
<p>Overall Comment #3</p>	<p>The PEIS must build into the Solar Energy Program additional safeguards to protect national parks and other special status areas administered by the NPS. The NPS would prefer that BLM adopt the SEZ only alternative because the modified preferred solar energy development program alternative, as identified in the Supplement, poses a significant risk to national parks and other special status areas administered by the NPS. The modified Preferred Alternative would open over 20 million acres of public lands to right-of-way applications, including 285,417 acres within the solar energy zones. The NPS comments to the Draft Solar PEIS identified 53 NPS units and five National Historic Trails in the six-state study area that are located within 25 miles of public lands identified under the preferred alternative. These areas remain within the area of the preferred alternative. These special places are integral to the southwestern United States’ landscape and possess sensitive natural and cultural resources that fall under the legal protections of the NPS Organic Act of 1916, as amended.</p> <p>After carefully considering the modified action alternatives and proposed new policies presented in the Supplement, the NPS concludes that:</p> <p>1. The modified preferred alternative poses a significant risk to national parks and other special places administered by the NPS. This is because this alternative makes available for potential solar development over 20 million acres in the six-state area. We acknowledge that new policies that are intended to steer development into the SEZs and assure that early engagement occurs with the NPS to identify concerns in the application process. The NPS asserts, however, that the cumulative potential outcome of the development of the public lands or “variance lands” outside the SEZs is poorly</p>

understood. There are 53 units and six¹ national historic trails that are located within 25 miles of lands available under this alternative. This represents approximately almost 43 percent of the lands available under this alternative.

¹ A sixth trail, Santa Fe NHT, is located in the PEIS study area. Some sections coincide with the Old Spanish and El Camino Real de Tierra Adentro NHTs in the vicinity of proposed Solar Energy Program lands. There is a very small area of Solar Energy Program lands located in the vicinity of the Santa Fe Trail in northeastern New Mexico, this acreage was not previously identified in NPS comments.

2. The NPS believes that development of the variance lands under the preferred alternative could be acceptable to the NPS if the following recommended adjustments are incorporated into the Final PEIS:

- a) **Exclude additional lands to minimize NPS resource conflicts.** Excluding lands available under the preferred alternative to account for the high potential for resource conflicts with NPS units, including national historic trails, would remove a large percentage of area likely to be subject to intense review by NPS under the variance application process. The NPS has prepared state-by-state maps of the areas recommended for exclusion, along with detailed comments that address the resource concerns for the variance lands in question. These maps and analyses are attached hereto as **Appendices A and B**. The BLM will be provided the geospatial data corresponding with the maps and resource-based justifications. The Service has determined that variance lands totaling 3,861,976 acres should be excluded from the Solar Energy Program (including additional lands within the Riverside East SEZ). The exclusions recommended by NPS include “variance” lands and areas within one SEZ (Riverside East), and are justified based on the identification of high potential for resource conflict. Please note that the NPS effort should be regarded as a preliminary and good faith effort to analyze potential, broad-scale resource conflicts, and responsive to the BLM given the tight project schedule. We are also providing the accompanying geospatial data and justifications in support of these recommendations. This acreage was derived from a resource-based, targeted analysis of variance lands located near NPS units and national historic trails. We suggest that the NPS-recommended exclusions be more intensively studied to develop a more complete understanding of the environmental consequences of unprecedented

development at the landscape level. Focused, resource-specific analyses usually performed at the BLM's Resource Management Plan level, could be the basis for evaluating whether excluded lands are appropriately classified. The NPS is a willing partner to work with BLM to more closely examine the exclusion areas near parks to determine whether these areas should be retained or included in the Solar Energy Program.

c) Exclude targeted variance lands located in desert tortoise connectivity areas abutting parks. The Supplement notes that desert tortoise conservation areas are excluded from the proposed Solar Energy Program and requests comment on areas as "proposed desert connectivity areas" in California and Nevada. Many of these proposed areas are located near NPS units in both states and are important corridors that must be maintained to ensure viability of populations with Joshua Tree NP, Death Valley NP, Mojave National Preserve and Lake Mead NRA. The Supplement describes two options BLM is considering for addressing variance applications in these areas. NPS's evaluation leads us to conclude the proposed desert tortoise mitigation measures in the Supplement do not adequately protect these critical linkages to ensure gene flow to populations outside parks and protect in-park populations of tortoise. The NPS is recommending additional exclusion areas to protect these linkages, consistent with Priority 1 areas recommended by FWS. The NPS is working with the Fish and Wildlife Service to ensure the NPS recommendations are consistent regarding tortoise connectivity needs. Final recommendations may include excluding additional variance lands from development to protect connectivity, strengthening tortoise mitigation in the Amargosa SEZ, and adjustments to or elimination of the Amargosa SEZ. See **Appendices A and B for the results of this analysis and description of the NPS process.**

d) Revise the standard exclusion area for National Historic Trails from 0.5 mi to 1.0 mile. The current BLM restriction is too narrow to avoid encroachment of solar development. The NPS recommends that the standard exclusion for national trails must be widened to ensure that trail segments are undamaged by development. This is necessary to because the 0.25 mile set back on either side of the trail is not adequate to capture trails where the alignment is uncertain. These trails contain a number of high potential sites and segments, some of which are nominated to the National Register. The additional corridor width would result in the exclusion of about 71,000 acres along all five trails in the Solar PEIS study area.

e) Further reduce the Riverside East SEZ to improve NPS resource protection for

Joshua Tree NP. The BLM has reduced this SEZ from 202,896 acres to 159,457 acres. Lands immediately adjacent to the park have been excluded from solar development, but BLM also proposes a height restriction of 10ft in nearby areas to reduce visual impacts instead of excluding these VRM class II areas. The NPS believes additional exclusions are needed to protect important linkages of desert tortoise habitat, Class I airshed, dark night skies, and viewsheds. A map in Appendix A provides an overview of the additional exclusions, data will also be provided to BLM that provides additional information in support of our request. In sum, the NPS asks BLM to accept the exclusions previously provided to BLM on August 29, 2011.

f) Increased emphasis on development in SEZs. The Supplement proposes several positive measures to encourage developers to locate projects within SEZs. This variance process for projects located outside SEZs places a greater burden on applicants to demonstrate a viable project. The NPS supports this approach, and supports the BLM's attempt to incentivize SEZ development. However, the Supplement fails to make clear the relative importance of SEZ development over development in variance areas. The NPS suggests that the Final PEIS clarify the priority of SEZ development by adding language explicitly stating that applications for a variance shall be deemed a *lower priority for processing than applications for right-of-way within SEZs*. Furthermore, the Final PEIS should require applicants for projects on variance lands to demonstrate that the lands within the SEZs are insufficient to meet project objectives. In addition, the variance process does not address how the BLM will screen applications that propose to utilize small federal land parcels in support of solar development on adjacent non-federal lands. Further analysis is needed to determine if parcels smaller than the calculated minimum acres (247 ac.) required for a utility-scale solar project should be retained in the proposed Solar Energy Program. The NPS recommends the BLM more closely examine the potential impacts of developing these parcels in support of other solar energy projects and the variance process be strengthened to screen out applications for development on those parcels with potential high conflict.

g) Strengthen the NPS role in determining the appropriateness of accepting applications in variance areas in proximity to parks and national historic trails. The variance process outlined in the Supplement states that the BLM may require an applicant to consult with NPS and provide documentation of potential impact on sensitive park

resources. To ensure that park resources, including scenic views that extend beyond park boundaries, are protected, the NPS, the NPS must have a defined role following the pre-application meeting in determining whether the BLM should accept an application in a variance area.

h) Require robust project-specific analyses of applicants seeking to site facilities in proximity to park units: Because utility-scale solar facilities incorporate new technologies being applied typically over hundreds of acres, the environmental impacts associated with them are generally poorly understood from impacts on wildlife to scenic views. Therefore, the NPS believes it is critical that when project applicants seek to locate facilities in proximity to park boundaries they bear the burden of proof that the development will not cause unacceptable adverse impacts to park resources and values. This burden needs to apply to proposals in SEZs and variance lands near NPS units.

To ensure that applicants adhere to a rigorous analytical framework, the NPS requests early involvement in the impact analysis process in order to ensure that all appropriate NPS impact concerns are addressed appropriately in the analysis.

In the case of scenic resources, for example, the NPS in cooperation with BLM and others is preparing guidance to aid park resource managers evaluate the adequacy and accuracy of visual impact analyses being prepared by applicants and their consultants for solar facilities. The guidance will address the full range of issues relevant to visual resources, including, but not limited to, solar-technology specific considerations, such as glint and glare analyses and night sky impacts. The guidance also will provide a set of rigorous requirements for developing visual impact simulations that are both realistic and spatially accurate thereby truly representing the appearance of a proposed facility as it would be seen by park visitors. We are hoping that applicants will also use the guidance to improve the quality of their visual impact analyses for solar projects in SEZs and variance lands. Doing so could reduce project delays and associated expenses that occur when analyses need to be redone to address deficiencies.

i) Develop and apply a more rigorous approach in addressing the cumulative impacts associated with the unprecedented scale and level of development that will be authorized under the Solar Energy Program: The potential for cumulative impacts from multiple solar facilities and associated infrastructure is of particular concern to the NPS. A

		<p>broad range of resources of concern encompassing parks and adjacent landscapes include: nightskies, natural soundscapes, wildlife habitat, water resources, air quality and visibility, scenic landscapes, fragile soils, and natural soundscapes. The current handling of cumulative impacts for variance lands produces a very unsatisfactory result. A better process needs to be devised for more rigorously analyzing cumulative effects and presenting that information in a meaningful and compelling way to decision makers.</p> <p><u>j) Ensure that a commitment to engage early with the NPS is reinforced across the bureau and that mechanisms within the Department are used to insure that differences of opinion are clearly vetted.</u> Where irreconcilable differences occur or are foreseen, NPS requests that high-level discussions between our two agencies and within the Department of the Interior occur early to determine whether moving forward with a given application or land use decision is in the public interest.</p>
<p>1.2</p>	<p>1-3/8-9.</p>	<p>CHAPTER 1</p> <p>See Overall Comment # 3. Based on the alternatives addressed in the Draft Solar PEIS, NPS recommended that of the three proposed alternatives the Park Service preferred the SEZ-only alternative with modifications and still recommends that alternative. Although the PEIS does not analyze Distributed Generation, Conservation and Demand-Side Management and restricting development to Populated Areas and Previously Disturbed Lands (e.g. the current Arizona RDEP project), NPS supports further examination of these options in future tiered planning processes.</p>
<p>1.3</p>	<p>1-4/31-34 and 38-39</p>	<p>See Overall Comment # 3. The statements suggest that SEZ identification and development is a primary focus of the PEIS. The NPS recommends more clarity in Statement 5. regarding the establishment of a process to address the objective of establishing an orderly process for allowing responsible solar energy development outside of SEZs. The NPS is concerned that the variance process must be strengthened to ensure orderly and environmentally appropriate development. These statements should be explicit that the BLM priority is development of the SEZs and the variance process is utilized to authorize development only when SEZ development is not an option.t .</p>
<p>1.5</p>	<p>1-6/17-22 & Table 1.6-1, page 1-8</p>	<p>The Scope of the Analysis states “For purposes of the Solar PEIS and associated decision-making, utility-scale solar development is define as any project capable of generating 20 megawatts (MW) or more. As a result, the BLM’s new Solar Energy Program would apply only to projects of this scale...” Further, Table 1.6-1 on page 1-8 provides estimated</p>

ATTACHMENT 1

		<p>acres needed for future development assuming 9MW per acre. According to the PEIS, this would mean that the minimum contiguous acreage required to build a utility scale solar project is about 247 acres. We note that BLM chose to adopt smaller parcels because of community-scale development needs or projects located on adjacent lands. Projects less than utility-scale would be considered in accordance with existing land-use plan decisions. The NPS recommends BLM perform additional analysis of contiguous variance area parcels less than 247 acres in size where these areas are remote, at great distance from established transmission lines, and occur in undisturbed habitat near national parks. The NPS has reviewed the acreages of variance lands in the six-state area and finds there are numerous areas where we believe these lands do not qualify to produce at least 20MW.</p>
<p>1.7.2</p>	<p>1-10/16-18.</p>	<p>The National Park Service agrees with and supports BLM's determination that it has the discretion to deny ROW applications prior to completing the NEPA process if such applications do not meet environmental criteria</p>
	<p>1-10/ 32-33</p>	<p>The National Park Service agrees with and supports BLM's position that it may deny a pending application if it has a "High Potential for Conflict." These criteria should also be used to exclude other lands adjacent to and near the SEZs and units of the National Park system. The Final EIS should designate additional exclusion areas outside SEZs using the above criteria.</p>
<p>1.7.2</p>	<p>1-10/37-42 and footnote 3</p>	<p>The National Park Service agrees with and supports the statement that land near or adjacent to lands designated by Congress, the President, or the Secretary as lands with a "High Potential for Conflict" and should be denied but we disagree that National Historic and Scenic Trails have a "Medium Potential for Conflict" as stated in IM 2011-061. The scenic viewshed of these areas are integral to their value to the American people and should be considered as areas with a "High Potential for Conflict." Projects that are located near high potential sites and/or segments of national trails that contain important historical or cultural values and integrity of setting should be screened as projects having a "High Potential for Conflict." The NPS also recommends that projects that are located near sacred sites and portions of historic trails that are potentially eligible for listing on the National Register of Historic Places be screened as project having a "High Potential for Conflict."</p>
<p>1.7.2</p>	<p>1-11/14-19</p>	<p>The NPS concurs with this statement, and recommends that it be amended to state that "pending applications on lands proposed as exclusion areas near national parks or national historic trails for utility-scale solar energy development in the Final Solar PEIS will be</p>

		denied”.
1.7.2	1-11/39-40	The NPS recommends that all pending applications currently classified as having medium or low potential resource conflicts be evaluated to ensure the proper classification. New information may result in elevating an application to the “High Potential for Conflict” category. The NPS is not aware of the rigor applied to the screening of each application for this classification.
		CHAPTER 2
2.2.1.1	2-3/10-14.	BLM has long recognized that processing applications can be costly to the agency and has appropriately required Cost Recovery. The review process for other agencies also adds impacts in employee time and travel. These impacts should be addressed as part of cost recovery; applicants should be required to pay for all project evaluation, including those incurred by other agencies.
2.2.1.1	2-9/ 34-40.	Air Navigation Hazards require that a beacon be placed on them as a warning to low-level aircraft. The Solar PEIS should clarify that the beacon use the best available technology to limit impacts on night sky.
2.2.1.2	2-13/24	NPS suggests this section include a discussion of how adaptive management is to be implemented at multiple scales, including project, SEZ, and multi-state.
2.2.1.3	2-14/14-25	<p>General comment regarding design features for night sky resources. The NPS recommends incorporating the following standard and enhanced mitigation measures in the appropriate location Appendix A, Section 2.2 of the Draft Solar PEIS.</p> <p>Protection of Natural Lightscapes For solar developments on variance lands completely outside of 25-mile radius from an NPS unit, standard mitigations should apply. For solar developments on variance lands between 10 miles and 25 miles, enhanced mitigations should apply. Solar developments within 10 miles of a NPS unit should have no permanent outdoor lighting (or should be prohibited all together if that limitation is infeasible for the operation of such a facility).</p> <p>These mitigation measures are designed to prevent vertical illumination exceeding 0.10 millilux at all points within the adjacent national park. Alternatively, a solar development can choose their own outdoor lighting mitigation techniques, propose a set of modeling criteria to the BLM for consultation with the NPS that takes into account future cumulative</p>

effects, and test it against the 0.10 millilux threshold of vertical illumination.

The NPS strongly encouraged the articulation of the minimum characteristics of both standard and enhanced mitigations in an appendix of the Supplemental DEIS.

Standard Mitigations (for lands beyond 25 miles from an NPS unit)

A lighting plan shall be prepared that documents how lighting will be designed, installed, and utilized to minimize night-sky impacts and impacts to nocturnal wildlife during construction and operations.

- Obstruction marker lighting shall only be installed when specifically required by the FAA and when using the minimum brightness, intensity, and frequency that meets the FAA requirement. Lights should be red at night and may be either red or white in the daytime. Strobes are preferable to flashing/blinking lights.

- Lighting for facilities shall not exceed the minimum number, intensity, and coverage required for safety and basic security. All area lighting shall be controlled through timer, sensor, or switch that is available to facility operators; dusk to dawn lighting controlled by photocell alone shall not be allowed except for building egress lighting. Area lights shall only be switched on when there is a specific need (e.g. cleaning mirrors and panels, pumping fuel, persons occupying an area, or alarm situation). When not needed, lights shall be switched off or dimmed to <20% of their full operational intensity. Exceptions to dimmed or switched off lighting for safety purposes shall be articulated in the lighting plan.

- All permanent lighting shall be fully shielded (e.g. full cut-off), except for collision markers required by FAA or other emergency lighting triggered by alarms. Such lighting shall be mounted so that no light is emitted above an imaginary horizontal plane through the fixture.

- Vehicle mounted lights are preferred over permanently mounted lighting for nighttime maintenance activities. When possible, such vehicle-mounted lighting shall be aimed toward the ground to avoid causing glare and skyglow.

		<ul style="list-style-type: none"> • Retro-reflective or luminescent markers are encouraged in lieu of permanent lighting. • All lighting shall be of minimum intensity to meet safety criteria. When accurate color rendition is not required (e.g. roadway, basic security), lighting shall be amber in color, using either low-pressure sodium lamps, yellow LED lighting, or equivalent. Such lighting reduces skyglow and willliffe impacts. When white light is required for accurate color rendition, it shall be $\leq 3500^\circ$ Kelvin color temperature. Bluish-white lighting shall be prohibited. <p><i>Enhanced Mitigations (for lands between 10 miles and 25 miles from an NPS unit)</i> A lighting plan shall be prepared that documents how lighting will be designed, installed, and utilized to minimize night-sky impacts and impacts to nocturnal wildlife during construction and operations. In addition to meeting the standard mitigations, it must also meet the following:</p> <ul style="list-style-type: none"> • No permanent light fixture, whether temporary, on a reduced duty cycle, or used for emergency may exceed 10,000 lumens. • All permanent lamps exceeding 2,500 lumens must be $\leq 2500^\circ\text{K}$ (yellowish). Those less than 2,500 lumens must be $\leq 3500^\circ\text{K}$ (warm white). • Facilities are allotted 200 lumens of permanent lighting per acre of developed land. An additional allowance of 1,000 lumens of permanent lighting per acre is allowed for lighting triggered by motion sensor (or other detection device) or on a duty cycle $\leq 20\%$ of nighttime hours. Emergency lighting triggered by alarms and mobile lighting is exempted from this allowance limitation, but must still meet the lumen cap and color requirements above.
<p>2.2.1.3</p>	<p>2-14/23-25</p>	<p>General comment regarding design features regarding air quality monitoring requirements. The NPS recommends incorporating the following standard and enhanced mitigation measures in the appropriate location Appendix A, Section 2.2 of the Draft Solar PEIS.</p>

ATTACHMENT 1

		<p>This states: ‘BLM is evaluating all comments received on the Draft Solar PEIS regarding proposed programmatic design features. A final proposed list of programmatic design features will be presented in the Final Solar PEIS.’ The NPS reiterates our previous comments that particulate matter (PM) monitoring requirements be added as an air quality design feature, particularly during implementation and operation of initial projects. Appendix A.2.2.12 requires on-site wind speed monitoring for dust control, page A-75 lines 4-8; this design feature should also include PM monitoring. On-site PM monitoring would assist in (1) defining the extent to which these projects may contribute windblown dust emissions during the construction and operational phases; (2) evaluating the effectiveness of dust control measures and mitigations; (3) determining whether additional measures or mitigations are needed; (4) informing development of future projects, including siting requirements; and (5) identifying future research needs related to anthropogenic windblown dust emissions and effects.</p> <p>Along with the PM monitoring, the design features should also include an adaptive management strategy for dust emissions. The adaptive management strategy would identify criteria for determining when dust control design features and mitigations are not effective and potential next steps. Specifically, this strategy should include a PM monitoring plan and appropriate PM concentration trigger thresholds, which would require additional management action if they are exceeded. Adaptive management for dust control is particularly important in situations where visibility in a Class I area may be adversely impacted, or the project/SEZ is located in or near a PM nonattainment area, or causing or contributing to a PM NAAQS violation. We recommend that the BLM solicit input from the NPS and other interested stakeholders when developing the adaptive management strategy for dust emissions, as this could address many of the air quality concerns raised in our comments.</p>
<p>2.2.1.3</p>	<p>2-14/23-25</p>	<p>See NPS comments at Appendix C, C-i for general comments regarding protection of scenic views. The NPS would like to ensure that additional viewshed protection measures as outlined in the discussion at C-i is included in the standard design features outlined in Appendix A2.2 of the Draft PEIS.</p>
<p>2.2.2</p>	<p>2-14/28</p>	<p>See Overall Comment #3. The NPS feels the selection of Modified Program as the preferred alternative is unnecessary. Selection of the Modified SEZ alternative would</p>

ATTACHMENT 1

2.2.2.1	2-15/3-12 and 2-17/Table 2.2-1	<p>allow the BLM and DOE to gain experience in implementing this framework, more data on impacts could be collected, while allowing solar energy objectives to be achieved..</p> <p>Proposed Right-of-Way Exclusion Areas: This section identifies areas that BLM has excluded from utility-scale solar development because they are known or believed to be unsuitable for such development. An obvious omission from the list is an overarching exclusion of lands in proximity to units of the National Park System in order to protect those units. As a result, a new #30 is set forth below to exclude lands near parks where development has been determined to not be in the public interest because of potential impacts to park resources and/or values. By building in this exclusion, the NPS and BLM will not need to consider proposals near parks again and again under the variance process on lands not appropriate for such development. This new #30 draws on the concepts contained in #16, #20, #26 and #29 that utility-scale solar development may need to be excluded on lands near nationally designated areas in order to protect such areas. The rationale in footnote (d) regarding the exclusion of VRM Class III lands in Utah near parks reflects the broad need for #30.</p> <p>Language for new #30: Lands outside units of the National Park System that have been determined to be inappropriate for development through the pre-application and/or NEPA process to the extent necessary to protect the values and resources of these nationally designed and treasured areas.</p> <p>Note: Under this exclusion category, lands may continue to be identified as inappropriate for utility-scale solar energy development in proximity to units of the National Park System. Through the SEZ analyses some such areas have already been identified and accounted for under #26. This new #30 addresses those lands that have already been identified as inappropriate for development near parks under the framework of the Solar PEIS and Supplement process and through future site specific analyses.</p>
2.2.2.2	2-15/22	<p>NPS recommends adding “or where additional SEZ-specific restrictions will ensure resource conflicts are minimized.” to the end of this sentence.</p>
2.2.2.1	2-16/Table 2.2-1, Item 18.	<p>The NPS recommends amending the standard exclusion under Item 18 as follows: “National Scenic Trails including a corridor of 0.5 mile from the center line except</p>

ATTACHMENT 1

		<p>where a different corridor width is established. National Historic Trails including a corridor of 0.5 mile from the center line except where a different corridor width is established. A 5-mile protection zone will be established around all documented high potential sites and segments (as defined in Section 12 of the National Trails System Act and outlined in each trail's planning documents) to ensure proper identification and protection of sensitive natural and cultural resources.”</p> <p>In the West, where viewscapes and viewsheds are critical to the public enjoyment of national trail corridors. The NPS believes additional analysis is needed adequately protect key vistas along these trail corridors.</p> <p>Many of these high potential sites and segments are equivalent to properties listed on, or eligible, for, the National Register of Historic Places. These may take the form of visible trail segments, gravesites, campsites, ruts, swales, or associated sites. A protection zone of five miles would be considered a minimum, depending on the viewscape from within high potential sites and segment.</p>
<p>2.2.2.2</p>	<p>2-16 Table 2.2-1</p>	<p>Table should include: Solar projects with more than 2,000 solar dish engines should be excluded from areas within 25 miles of national park units (including national historic trails). See acoustic environment sections of SEZ action plans in Appendix C.</p>
<p>2.2.2.2</p>	<p>2-16/1-18 Table 2.2-1</p>	<p>The National Park Service supports the identification of exclusion areas as listed on this page with some exceptions. Many of them refer to designations in applicable land use plans and the plans potentially need updating. BLM should seek input to see if changes to specific plans might add areas to the exclusion list. If so, those areas should be identified as exclusion areas until a decision is made otherwise.</p>
<p>2.2.2.2</p>	<p>2-16/1-18 Table 2.2-1</p>	<p>The NPS does not agree with the exception contained in exclusion number 7. We believe SRMAs in Nevada and all of the Yuma East SRMA in Arizona should also be excluded. In addition we would like to make sure the following areas around Lake Mead are excluded: Item 3. All Areas of Critical Environmental Concern (ACECs), including Desert Wildlife Management Areas (DWMAs) in the California Desert District. - In Clark County, Nevada this should include : o Gold Butte A ACEC</p>

		<ul style="list-style-type: none"> o Gold Butte B ACEC o Gold Butte C ACEC o Devils Throat ACEC o Virgin River ACEC o Mormon Mesa ACEC o Sunrise Mountain ACEC o River Mountains ACEC o Keyhole Canyon ACEC o Piute / Eldorado Valley ACEC <p>Item 7. Developed Recreational facilities, special-use permit recreation sites (e.g.-ski resorts and camps) and all Special Recreation Management Areas (SRMAs), except those in Nevada and a portion of the Yuma East SRMA in Arizona.</p> <ul style="list-style-type: none"> - In Clark County, Nevada we recommend the following SRMAs be included: <ul style="list-style-type: none"> o Muddy Mountains SRMA o Sunrise Mountain SRMA o Nelson/Eldorado SRMA <p>These SRMAs have integrity and serve a broad public need for outdoor recreation.</p> <p>Item 17. National Recreation Trails and National Back Country Byways.</p> <ul style="list-style-type: none"> - In Clark County, Nevada we recommend the inclusion: <ul style="list-style-type: none"> o Bitter Springs Back Country Byway o Gold Butte Back Country Byway o In addition, we recommend the vistas be protected from Northshore Road within Lake Mead National Recreation Area. This is one of the most popular scenic drives in southern Nevada and the road has been nominated by the Communities of Overton and Boulder City to the State of Nevada for National Scenic Byway status. Views to the north into the Gale Hills should be protected. The Nevada Department of Transportation is currently evaluating this request and we anticipate designation with 2012.
2.2.2.2	2-17/27-29 Table 2.2-1	The areas need to be clearly defined and identified on a map of suitable scale in the document. As described, NPS cannot fully determine that the Exclusion areas are sufficient in size and properly located
2.2.2.2	2-17/Table 2.2-1, footnote	The inclusion of some SRMA lands as variance lands adjacent to Lake Mead NRA may be inappropriate for solar energy development. See NPS exclusion map for Lake Mead NRA

ATTACHMENT I

			in Appendix A.
2.2.2.2	b	2-18, Table 2.2-1 footnote d	In Utah, VRM Class III lands have also been removed due to the high sensitivity and location proximity to several National Park Units and Cultural Resource Management Areas. This should also be applied to the other states for federal consistency (vis-a-vis to new policy indicating that adjacent states should not have different listings for federally listed species). http://www.washingtonpost.com/politics/new-rule-on-endangered-species-would-end-state-by-state-listing-for-threatened-plants-animals/2011/12/09/gIQA WJ9diO_story.html
2.2.2.2	2-18	Table 2.2-1, footnote d	The NPS agrees that removing VRM Class III lands in Utah due to proximity to national parks and significant Cultural Resource Special Management Areas is an important protective measure. The merits of expanding its application to other areas in proximity to parks and other areas under NPS management within the six-state study area needs to be examined prior to finalized the PEIS.
2.2.2.2	2-18/16-24		This section discusses action plans required to fill data gaps for individual SEZs carried forward in the proposed Solar Energy Program. These plans are to be prioritized for SEZs most likely to be developed in the near-future. The NPS supports this approach and looks forward to working with BLM and prospective applicants to ensure that the new information is rigorously compiled and analyzed. The NPS suggests that BLM apply the concept of action plans to the development of information for variance areas where there is a high potential for conflict with sensitive resources in national parks and other special places administered by NPS. These plans could be developed for purposes of determining whether variance areas are appropriately classified.
2.2.2.2.3	2-26/ 1-8.		Under the section entitled “Incentives for Projects in SEZ’s” the NPS supports the encouragement and development of renewable energy on appropriate nonfederal lands and recommends that any specific application in a variance area be required to analyze why the project could not be placed in a SEZ or on nonfederal land.
2.2.2.3	2-33/3-23		In Section 2.2.2.2, Proposed Solar Energy Zones, it is clear that the BLM has structured the proposed Solar Energy Program to encourage development in the proposed SEZs, through faster environmental review and other incentives for projects in SEZs. The NPS recommends this message be reinforced more directly in Section 2.2.2.3, Proposed Variance Areas for Utility-Scale Solar Energy Development. At line 3, it states “In order to accommodate flexibility described in the BLM’s program objectives, the modified

		<p>program alternative allows for responsible utility-scale solar development outside of SEZs.” This statement suggests that BLM will give co-equal priority to variance applications and applications in SEZs. If this is not the case, the NPS requests the following language be inserted in this section; <u>“Variances considered and approved by the BLM will be limited in time and place so that the exceptions do not become the rule or undermine the directed development framework intended in the modified program alternative. Applicants requesting a variance should assume that such requests will be a lower priority for the BLM, take longer to process, and result in higher reimbursable costs than a project located in a SEZ.”</u></p>
<p>2.2.2.3.1</p>	<p>2-34/22-28.</p>	<p>An environmental inventory must include the collection of data on all physical and biological resources present in the proposed project area. To fully analyze the potential environmental impacts requires a complete ecological picture of the existing conditions not just the impacts to special status species.</p>
<p>2.2.2.3.1</p>	<p>2-3343</p>	<p>The <i>Pre-application Meeting</i> requirements outlined in this section appear to be more abbreviated than current BLM guidance provided in BLM IM2011-061, Solar and Wind Energy Applications – Pre-Application and Screening. The rigor, value and importance of the second pre-application meeting need to be underscored. The current guidance provides the necessary language the NPS seeks in the variance process, including the possibility of alternative siting away from high conflict or sensitive resource values toward areas having lower potential for conflict. The current guidance is more detailed regarding how BLM will apply the information obtained through the pre-application meeting process. It is also more explicit that input received from potentially affected parties may result in an application not being filed or if filed, denied. The discussion on page 2-19, lines 12-13 needs to be strengthened by incorporating more fully the guidance provided in IM 2011-061 for pre-application meetings. We realize that section 2.2.2.3.2 on page 2-40 ultimately informs the reader that BLM can deny pending applications.</p>
<p>2.2.2.3.1</p>	<p>2-35/8</p>	<p>The NPS recommends that this requirement go further to explain “minimal conflict with adjacent lands.” In our view, the variance process is intended to allow limited development outside of SEZs and only where environmental conflicts may be avoided. The NPS recommends that the term be expanded to mean “impacts to adjacent specially designated areas, including national parks, will be avoided through alternative siting or technology, mitigation and/or resource conflict avoidance measures.”</p>

<p>2.2.2.3.1</p>	<p>2-35/18</p>	<p>The NPS prefers that this section provide a third option to exclude certain desert tortoise connectivity areas from the Solar Energy Program that about national park units in this region. Figure 2.2-2 illustrates desert tortoise conservation areas located in Death Valley NP, Joshua Tree NP, Mojave NP, and Lake Mead NRA. These areas are linked to other conservation areas by the mapped connectivity areas. The NPS believes these connectivity areas must be preserved to ensure population viability and gene flow characteristics. The Supplement provides new information on desert tortoise habitat connectivity in the areas around Death Valley NP, Joshua Tree NP, Lake Mead NRA, and Mojave National Preserve. NPS's evaluation leads us to conclude the proposed desert tortoise mitigation measures in the Supplement do not adequately protect these critical linkages to ensure gene flow to populations outside parks and protect in-park populations of tortoise. The NPS is recommending additional exclusion areas to protect these linkages, consistent with Priority 1 areas recommended by FWS. The NPS is working with the Fish and Wildlife Service to ensure the NPS recommendations are consistent regarding tortoise connectivity needs. Final recommendations may include excluding additional variance lands from development to protect connectivity, strengthening tortoise mitigation in the Amargosa SEZ, and adjustments to or elimination of the Amargosa SEZ.</p>
<p>2.2.2.31</p>	<p>2-38/39-45 and 2-39/21- 22</p>	<p>See comment at 2-16/Table 2.2 – 1, Item 18. The NPS requests a 5-mile protection zone be established around all documented high potential sites and segments (as defined in Section 12 of the National Trails System Act and outlined in each trail's planning documents) to ensure proper identification and protection of sensitive natural and cultural resources. The NPS believes additional analysis is needed adequately protect key vistas and identify sensitive natural and cultural resource conflicts near these important trail corridors. The NPS proposes such a designation is needed to trigger consultation on the potential impacts to eligible National Register of Historic Places (NRHP) sites. This is because many of these high potential sites and segments are equivalent to properties listed on, or eligible, for, the National Register of Historic Places. These may take the form of visible trail segments, gravesites, campsites, ruts, swales, or associated sites. A protection zone of five miles would be considered a minimum, depending on the viewshed and other natural and cultural resource conditions within the high potential sites and segment.</p> <p>NPS offers the following additional guidance for inclusion in Appendix A.2.2 of the Draft PEIS:</p>

ATTACHMENT I

		<p>“If construction involves structures over 25feet high within 15 miles of a National Historic Trail, a visual resources analysis shall be conducted to determine whether or not there are adverse effects to the settings of the Trail’s segments and associated resources.”</p> <p>These guidelines are reinforced by a BLM website issued by the Lander District near South Pass, WY. Pertaining to oil and gas leasing (and this should also apply to large-scale solar projects and associated transmission lines) it states: “Highly visible projects and/or projects out of scale with the surrounding environment (such as large wind-energy development projects, gas plants, power plants, high voltage transmission lines, etc.) are subject to the following restriction: Projects of this type outside of 5 miles on each side of the NHT are authorized only if the project causes no more than a weak contrast as defined in BLM’s Visual Resource Manual.”</p>
<p>2.2.2.3.1</p>	<p>2-37/42</p>	<p>The NPS recommends that this requirement go further to explain “minimize impacts on water resources.” Water resources in the Solar PEIS study area extremely limited. In our view, the variance process is intended to allow limited development outside of SEZs and only where environmental conflicts may be avoided. The NPS recommends that the term be expanded to mean “impacts to water resources, including national park water resources, will be avoided either through alternative siting or technology, mitigation and/or resource conflict avoidance measures.”</p>
<p>2.2.2.3.1</p>	<p>2-39/13-19</p>	<p>The NPS appreciates the inclusion of this statement as part of the variance coordination process.</p>
<p>2.2.2.3.1</p>	<p>2-40/17-20</p>	<p>The NPS suggests this language be made similar to the language provided in BLM IM2011-061, Review and Screening of New and Existing Applications). That guidance states: “Based on the discussion during pre-application meetings, the documentation received from the applicant, and the recommendations of affected Federal, state, tribal, and local government land managers, the BLM authorized officer may recommend that an application not be filed for the proposed project or that a proposed project be modified prior to submission of an application. If a proposal does not avoid areas where development would cause significant impacts to sensitive resources and values that are the basis for special designations and protections, the BLM may exercise its discretion to not accept and to reject the application.” [emphasis added]</p>
<p>2.2.3</p>	<p>2-41/5</p>	<p>The NPS concludes, based on the alternatives addressed, that the Modified Solar Energy</p>

		<p>Zone Alternative affords the greatest protection to the special places administered by NPS. This alternative would make available under the Solar Energy Program the smallest amount of land area adjacent to parks, and would impact the fewest number of park units and national trails – four. Furthermore, the Riverside East, Amargosa Valley, Gold Point and Fourmile East SEZs have been reduced in size and additional design requirements proposed to further reduce visual and other resource impacts. With acceptance of NPS-recommended changes to the configuration of the Riverside East SEZ, this alternative represents the most protective alternative for parks and national trails in the six-state study area.</p>
<p>2.3</p>	<p>2-43 Table 2.3-1, footnote d</p>	<p>See comment at page 1-6/17-22 & Table 1.6-1, page 1-8. The NPS concurs with removing contiguous areas of less than 247 acres.</p>
<p>2.3</p>	<p>2-51 Table 2.3-1</p>	<p>General comment regarding the omission of night sky resources from the assessment of impacts by alternative.</p> <p>Night Sky Impacts from development inside Modified SEZ</p> <p>While a number of SEZs that posed a threat to NPS lightscape resources were removed from solar development consideration, five SEZs continue to pose a threat. All of these require enhanced mitigation to prevent major impacts to night skies on adjacent NPS lands. Such mitigation must be thorough and restrictive, and may not necessarily be compatible with the operation of all kinds of solar facilities. Two of these SEZs, Fourmile East and Amargosa Valley are within 10 miles of NPS lands, and even enhanced mitigation of multiple utility-scale solar plants is unlikely to reduce impacts to natural lightscape conditions to negligible levels. This 10-mile limit is based on observations of the impact of artificial lighting at remote facilities upon adjacent natural lands (including the direct glare component and indirect skyglow component) and the expected size and intensity of development.</p> <p>The NPS considers vertical illumination exceeding 0.1 millilux falling upon park natural areas to substantially impact natural darkness. At this level, human dark adaptation is somewhat affected and faint shadows may be seen cast upon the ground by casual</p>

observers. This level also corresponds to the threshold of the peak brightness of the brightest natural object in the night sky (the planet Venus) on a moonless night. Small remote industrial facilities can induce this impact (0.10 millilux) at distances of over 10 miles. Mitigation can substantially reduce this radius of impact, but the potentially large size and coverage of solar plants can more than overwhelm mitigation measures. Even a fairly restrictive limit of 1,000 lumens per acre (a single 100 watt Metal Halide luminaire for every 8 acres), would produce 3 million lumens for cumulative plants across a 3,000 SEZ (industrial facilities often have 100,000 to 500,000 lumens per acre). This is roughly equivalent to a population center of 1,000 – 2,000 people. Many of the SEZs are several times larger than 3,000 acres, and the impact of support facilities (e.g. employee housing, road traffic, commercial support to the employees) is not factored into this analysis

The NPS lands adjacent to these five SEZs all have high quality natural lightscape conditions, valued for human aesthetics, stargazing recreation, and nocturnal habitat. Lightscape resource quality in the following parks near these five SEZs has been determined by actual quantitative measurements and visual estimations by the NPS, as well as being evaluated by DMSP satellite imagery. Death Valley National Park and Great Sand Dunes National Preserve have some of the highest caliber night sky quality measured by the NPS, and are thus the most sensitive. They are also within 10 miles of modified SEZs. For this reason the NPS recommends either removing these SEZs from further solar development consideration due to the anticipated impacts to night sky quality, or requiring development within these SEZs and within 10 miles of an NPS boundary to install no permanent outdoor lighting.

SEZ	NPS units within 25 miles that have documented high quality night sky/natural lightscape conditions
Riverside East	Joshua Tree National Park
Fourmile East	Great Sand Dunes National Preserve
DeTilla Gulch	Great Sand Dunes National Preserve
Amargosa Valley	Death Valley National Park
Gold Point	Death Valley National Park

		<p style="text-align: center;">Programmatic Approach to Variance Lands</p> <p>A significant number of variance lands adjacent to NPS units, and the majority of those units are expected to possess good quality night skies based on DMSP satellite imagery, or confirmed as such by direct NPS measurements. These present additional risk to natural lightscapes on NPS lands, even when shielded by terrain (as light scattered indirectly through the atmosphere is still a concern). The potential for clustering of cumulative solar developments in otherwise remote areas currently devoid of artificial light should require mitigation articulated through an advanced lighting plan and meeting requirements articulated in this PEIS.</p> <p>The BLM Visual Classification method does not examine nighttime visual quality and is not suited for the protection of aesthetic resources at night. Specific mitigations and a provisional distance-based classification are necessary to provide a structural framework for the protection of natural lightscape resources.</p>	
<p>2.3</p>	<p>2-57</p>	<p>In the Special Status Species section, please provide a detailed definition or descriptions of special status species throughout. These must include species with State Natural Heritage ranks of G1 and G2.</p>	
<p>2.3</p>	<p>2-59 Table 2.3-2, Air Quality</p>	<p>General comment regarding Air Quality. The Draft Solar PEIS does not discuss the impacts of ongoing dust emissions that could occur after construction is complete (e.g. during the operational/decommissioning phases). However, page 5-147 of the DPEIS acknowledges that “Based on the large area that could be disturbed and that the fact that stabilization is never fully effective, wind erosion during operation needs to be addressed in site-specific assessments during the ROW application process to assess the severity of these impacts.” Given the vast acreages that could be disturbed for solar energy development projects considered in this DPEIS, <i>ongoing windblown dust from disturbed arid soils is a major air quality concern that should be considered in more detail in the analysis.</i> This includes development of a windblown dust adaptive management plan, as described in more detail below.</p> <p>While we recognize that estimating windblown dust emissions depends on many site</p>	

		<p>specific factors (i.e., soil type, soil moisture, acreage disturbed, topography, predominant wind conditions/wind speeds), and is a difficult task, we believe it is inappropriate for the environmental analyses in the DPEIS to not address this issue. A study in Utah found that previously disturbed arid soils, particularly those that were recently disturbed, were much more susceptible to continued wind erosion than those with relatively undisturbed/intact crusts. In particular, they found that the Friction Threshold Velocities (the friction velocity at which large, intact chunks of the surface were blown away) for undisturbed intact soils was dramatically higher (15-42 times greater) than those of soils that had previously undergone varying degrees of disturbance². In other words, it takes much lower wind speeds to cause ongoing wind erosion and windblown dust in already disturbed soils. After a review of local wind speeds for the study area, the authors also concluded that mean, median and maximum wind speeds never exceeded the friction threshold velocity for undisturbed soils. In contrast, the maximum wind speeds frequently exceeded the friction threshold velocities for all previously disturbed soils, suggesting that anthropogenic disturbance has a large impact on dust emissions in desert regions. As discussed in more detail below, anthropogenic dust emissions are an important air quality concern in terms of human health effects from elevated particulate matter concentrations, as well as regional and near-field visibility impacts in National Parks.</p>
<p>2.3</p>	<p>2-59 Table 2.3-2, Air Quality</p>	<p>General comment regarding Air Quality. There is growing concern over air quality implications for large scale land disturbance, such as that identified in the PDEIS. This includes windblown dust emissions contributions to visibility impairment and human health impacts related to elevated particulate matter (PM) concentrations. This latter concern is emphasized by the fact that specific SEZ analyses predicted violations of the health-based PM₁₀ and/or PM_{2.5} National Ambient Air Quality Standards (NAAQS). However, the draft and supplemental PEIS documents did not discuss the potential contribution of windblown dust to both regional and near-field visibility impairment. This information should be incorporated into the PEIS and associated documents.</p> <p>Speciated visibility monitoring data from the IMPROVE network indicates that dust emissions contribute to visibility impairment in the six state study area (i.e., fine soil and</p>

² Belnap J., Gillette D.A. 1997. Disturbance of biological soil crusts: Impacts on potential wind erodibility of sandy desert soils in southeastern Utah, Land Degradation & Development, VOL. 8, 335-362.

ATTACHMENT I

		<p>coarse mass fractions). While IMPROVE data alone cannot differentiate source contributions to measured dust (i.e., local/regional versus global and anthropogenic versus natural contributions), an attribution study found that on the majority of days defined as “worst dust days,” a given dust event could be attributed to mostly local and regionally transported dust sources, and dust from Asian dust events, or the global fraction, made a much smaller contribution.³</p> <p>As windblown dust emissions are the greatest air quality concern associated with solar energy development projects, these issues should be addressed in more detail in the DPEIS and supplement document. To address these comments, we strongly recommend incorporating an adaptive management approach for dealing with windblown dust emissions, as defined below.</p> <p>² Kavouras, I.G., Etyemezian, V., DuBois, D. W., Xu, J., Pitchford, M. 2009. Source reconciliation of atmospheric dust causing visibility impairment in Class I areas of the western United States, Journal of Geophysical Research, VOL. 114, DO2308, doi:10.1029/2008JD009923</p>
2.3.1.1	2-63/32 and 35	<p>The NPS recommends revising these sentences as follows: Line 32 - “By excluding lands with or adjacent to known sensitive resources, resource uses, and special...” [emphasis added]. The statement as written infers that only sensitive resources or special designations within the variance lands are considered. Line 35 - “Time and effort would be directed to those projects that have a low potential for resource conflicts.” [emphasis added].</p>
2.3.1.1	2-64/1-3	<p>The NPS recommends changing this statement to: “be required to coordinate with federal, state, Tribal, and local stakeholders, evaluate site-specific resource conflicts, and resolve these conflicts, as part of the variance application analysis process.” [emphasis added]</p>
2.3.1.2	2-64/30	<p>NPS suggests this section provide a summary analysis of landscape impacts. Landscape metrics such as fragmentation are needed to fully understand the environmental significance of the utility-scale solar development under the modified preferred alternative over the 20+ million acres.</p>
2.3.1.1	2-65/12-14	<p>See comment at page 2-64/1-3.</p>

³ Kavouras, I.G., Etyemezian, V., DuBois, D. W., Xu, J., Pitchford, M. 2009. Source reconciliation of atmospheric dust causing visibility impairment in Class I areas of the western United States, Journal of Geophysical Research, VOL. 114, DO2308, doi:10.1029/2008JD009923.

2.3.1.1	2-65/36-40	<p>The NPS is concerned that this statement suggests that “economically and technically viable” are the primary factors that determine whether a variance applications is approved. This discussion also seems to give equal or priority to variance applications. The NPS requests that this statement be rewritten to demonstrate that utility-scale projects outside SEZs must show they will be environmentally responsible, impacts will be minimized, and only when there is insufficient acreage available within SEZs. [emphasis added].</p>
2.3	2-45 Figure 2.3-2	<p>As identified in the PEIS with the current proposal, the Riverside East SEZ, could be visible at locations within the eastern third of the park. The full SSPEIS includes lands immediately adjacent, and if not adjacent then within the viewshed to the park that could be open to development with the variances currently proposed. These lands should be removed from the variances and excluded from development.</p>
2.3.1.1	2-63/26-30	<p>The NPS requests that it be able to review the proposed final the design features and authorization policies in the Final PEIS.</p>
2.3.5	2-80/20	<p>The NPS is concerned that while the cumulative impact analysis for the SEZs is a semi-quantitative process, the broader programmatic review of cumulative impacts is entirely a qualitative review. Please see Appendix A for NPS analysis of resources near parks. This analysis evaluates potential conflict with NPS resources at a landscape level and should be considered as part of refinements to the cumulative analyses provided in the PEIS.</p>
2.3.5	2-81/4	<p>Add: In addition, Death Valley National Park requests that the cumulative impacts analysis incorporate the adjacent and simultaneous DOE/NNSA proposal for commercial solar development on the Nevada Test Site. These two projects together have the potential for significant adverse impacts to the water resources of DEVA. Since both projects are co-proposed by the DOE, at the same time, and literally next to each other, they should be analyzed together in the context of cumulative impacts as directed by the National Environmental Policy Act.</p>
3.2.3	3-2/41	<p>CHAPTER 3 Land Use: This section contains a list of objectives related to the DOE Program. Among them is to “avoid impacts on special use lands...” Recommend that National Historic and Scenic Trails be added to the list. While the list of areas is not meant to be exhaustive it would be advisable to include trails in it.</p>
3.2.5	3-4/17	<p>Provide a detailed definition or descriptions of special status species. These must include species with State Natural Heritage ranks of G1 and G2.</p>
3.2.8	3-5	<p>Visual Resources and Aesthetics: Add new bullet:</p>

		<p>1. Consider visual effects of project location and components on nearby units of the National Park System and other areas under NPS management.</p> <p>APPENDIX A</p> <p>The NPS is interested in knowing the classification of these applications in terms of screening the potential for resource conflicts. The table would be more useful if the reader understands whether the BLM has completed its screening of the applications for their potential to have high, medium, or low resource conflict. We also note that the NPS would like this section and table to identify the applications that occur within SEZs that are to be carried forward in the Solar PEIS.</p> <p>This states that the estimated total capacity of the facilities proposed under the pending solar applications is 33,313 MW. The acreage encompassed by these applications is 685,037 acres. This information reinforces the NPS concern that existing applications would meet solar energy power production goals without the need for significant additional land area under the proposed preferred Solar Energy Program Alternative. This also reinforces the fact that the pending applications will be reviewed and/or screened under existing BLM policy. The NPS questions the need for the preferred alternative when the SEZ only alternative and these pending applications may fully meet objectives under the Reasonable Foreseeable Development Scenario.</p> <p>APPENDIX B</p>
Appendix A	A-1 Table A-1	
Appendix A	A-1 Table A-1	
Appendix A	A-1/20-22	
B.2.1.3	B-9/14	<p>The NPS notes that the summary of potential impacts B.2.1.1 highlights several NPS concerns for the Iron Mountain SEZ. These include wilderness characteristics, night sky environment as viewed from Joshua Tree NP, wind erosion impacts, groundwater use, establishment of noxious weeds, disruption of dune, playa, desert scrub, and riparian plant communities, exceedances of ambient air quality standards for particulate matter, strong visual contrasts and noise levels. The NPS concurs with the rationale for eliminating the Iron Mountain SEZ. These potential impacts support eliminating this SEZ from further consideration as described in this section. The impact summary supports the exclusion of lands that composed the SEZ and support the exclusion of variance lands that lie immediately adjacent to the former SEZ. The development of variance lands in this area will result in similar impacts and should be excluded from right-of-way application. See NPS recommendations for exclusions in Attachment 1-Appendix A.</p>
B.4.2.3	B-34/17	<p>The NPS notes that the summary of potential impacts in B.4.2.1 highlights several NPS</p>

		<p>concerns for the Red Sands SEZ. These include clear views and adverse visitor experience in the White Sands NM, adverse impact to recreational use, wind erosion impacts, groundwater use, establishment of noxious weeds, disruption of wetland, dry wash, playa, and dune habitats, impact to aquatic biota, exceedances of ambient air quality standards for particulate matter, strong visual contrasts and noise levels. The NPS concurs with the rationale for eliminating the Iron Mountain SEZ. These potential impacts support eliminating this SEZ from further consideration. The impact summary supports the exclusion of lands that composed the SEZ and support the exclusion of variance lands that lie immediately adjacent to the former SEZ. The development of variance lands in this area will result in similar impacts and should be excluded from right-of-way application. See NPS recommendations for exclusions in Attachment 1-Appendix A.</p>
<p>Appendix C</p>	<p>C-i</p>	<p>APPENDIX C</p> <p>General comment regarding the protection of scenic views. For many parks, scenic views that extend beyond park boundaries are an important component of the visitor experience. The expanse of these views is often inspirational and iconic of the American spirit and often an important reason why people visit parks. The type, form and contemplated density of utility-scale solar development in the west pose a broad range of unique impacts to these shared scenic landscapes, including alteration of vegetation and landform, release of fine dust, generation of optic effects (e.g., glint and glare), and light pollution. The NPS is concerned that shared scenic landscapes associated with variance lands and SEZs could be lost to this and future generations if their presence and value is not accounted for and protected under the solar energy program ultimately adopted by the BLM. Both site-specific and cumulative impacts of multiple facilities must be addressed via rigorous visual resource analyses to determine if the siting of utility-scale solar facilities near park boundaries and special status areas is in the public interest.</p> <p>For all projects the SEZs where the NPS has identified a concern related to the protection of scenic views, action plans need to include additional data collection and analysis related to this resource value. While the NPS has provided some information via a GIS-analysis related to the need to screen lands near parks to protect scenic values that work was preliminary, and more needs to be done.</p> <p>While we realize the discussion in this section relates to additional needed analyses for</p>

lands in SEZs, the information and analysis identified below is also needed for applications in variance areas:

1. **Require robust project-specific visual impact analyses.** Because utility-scale solar facilities incorporate new technologies, the visual characteristics and associated visual impacts are generally poorly understood. Therefore, NPS requests that robust project-specific visual impact analyses be conducted for new solar projects proposed in SEZs and variance lands near NPS units. In addition, the NPS requests early involvement in the visual impact analysis process in order to ensure that all appropriate NPS visual impact concerns are addressed appropriately in the analysis.

NOTE: In cooperation with BLM, NPS is preparing guidance to aid park resource managers evaluate visual impact analyses for solar facilities that will ensure that the analyses address the full range of relevant issues, including, but not limited to, solar-technology specific considerations, such as glint and glare analyses and night sky impacts. The guidance will provide a set of rigorous requirements for development of visual impact simulations that are both realistic and spatially accurate thereby truly representing the appearance of a proposed facility as it would be seen by NPS visitors. The guide should also prove helpful to applicants and their consultants in preparing improved visual impact analyses for proposed solar projects. In the long run, better information and analysis upfront should lead to more defensible decisions and reduced project delays and associated expenses that occur when portions of the impact analyses must be redone to address deficiencies.

2. **Require robust cumulative impact analyses.** The potential for cumulative visual impacts from multiple solar facilities and associated infrastructure is of particular concern to NPS. The Draft Solar PEIS acknowledges that “solar development would be a major contributor to cumulative visual impacts from foreseeable development in the six-state region.” The large size, strong, regular geometry, and reflective properties of the various solar technologies make them visible at long distances in the open landscapes and clear air found in the Western U.S., particularly when viewed from the elevated viewpoints frequently encountered in NPS units. These characteristics also create the potential for long-duration,

		<p>sequential views of multiple facilities for National Trail users and motorists on scenic highways. NPS requests that BLM incorporates full and meaningful consideration of cumulative visual impacts from solar facilities and associated infrastructure and activities into its planning activities and land use decision making, and that impact analyses for proposed solar projects include robust cumulative visual impact analyses that are complete, accurate, and of sufficient detail to be useful to decision makers.</p> <p>To help further the needed level of analysis on which to base decisions, the NPS is conducting a more comprehensive study than was performed in its preliminary GIS analysis presented as part of its comments on the Supplement. This detailed assessment of sensitive viewsheds outside NPS units is intended to identify and prioritize areas where restrictions on utility-scale renewable energy development may be appropriate to preserve important visual resource values. Additional analysis will be needed, especially on variance lands. Because of the “burden of proof” that applicants for facilities on variance lands carry, the need to finance and carryout additional studies will rest on them, not the NPS to determine if their proposed facilities would not result in unacceptable adverse impacts to scenic views that extend beyond park boundaries.</p> <p>The NPS study will characterize existing known key observation points (KOPs) and identify new KOPs within NPS units that have views of lands outside those units. After running composite viewshed analyses from these KOPs to determine visibility limits, the viewed areas outside the parks will be assessed to determine the nature and quality of the views from the relevant NPS units, in order to determine their importance to current and future NPS unit visitor experiences. A framework for prioritizing external viewsheds for development avoidance/restriction will also be developed. The prioritization will be based on the importance of the relevant KOPs; the visual qualities and other attributes of the viewed landscape; and other factors, such as coincident values in other resource areas, land ownership/management status, or current or projected future land uses. Products of the study are anticipated to include designated sensitive external viewsheds ranked by preservation importance.</p> <p>NPS may request that BLM restrict solar development in all areas identified as visible from one or more KOPs or for a specified distance from NPS units within these visible</p>
--	--	---

		<p>areas, as a temporary measure until the study provides detailed recommendations on a unit-by-unit basis. If this course of action is taken, the study would likely result in fewer areas being identified for preservation than under the temporary measure, because one or more of the following conditions will occur for some NPS units:</p> <ul style="list-style-type: none"> • visual resources are not central to the visitor experience at these units; • visual concerns outside unit boundaries are limited to areas in view of a small number of KOPs, of lower sensitivity; • visual concerns outside unit boundaries are limited to areas that are already protected from development for other reasons; • visual concerns outside unit boundaries are limited to areas far enough from the NPS unit that potential visual impacts are not significant; or • visual concerns outside unit boundaries are limited to areas that are already sufficiently disturbed as to make preservation unnecessary. <p>While it is possible that the study process will identify additional KOPs that could result in additional lands outside NPS units being identified as needing preservation for visual resource values, NPS anticipates that on the whole the study will ultimately result in a reduction in the total number and size of areas requiring preservation, relative to the temporary development restriction measure.</p>
<p>Appendix C, C.2</p>		<p>All “Acoustic Environment” sections: The level of controversy and impacts to soundscape resources will vary depending on the size of the proposed project. The technology with the greatest potential to impact the acoustic environment is solar dish engines. The number of engines in the development will affect the distance necessary for noise from the project to attenuate to natural ambient conditions.</p> <p>The average L90 sound level for the NP units potentially affected (Great Sand Dunes, Joshua Tree, Death Valley) is 19 dBA (L90 is commonly used as a surrogate for natural ambient conditions). Noise levels above 19 dBA have the potential to impact park soundscapes.</p> <p>Based on generalized modeling assumptions, solar developments with 8,000 engines may require more than 35 miles to attenuate to 19 dBA</p> <p>Similarly, solar developments with 18,000 or more engines may require more than 40 miles to attenuate to 19 dBA.</p>

		<p>Due to the high potential for acoustic impacts and controversy, Solar projects with more than 2,000 solar dish engines should be excluded from areas within 25 miles of national park units (including national historic and scenic trails). Noise from projects with less than 2,000 engines within 25 miles of a unit of the national park system should be modeled and analyzed to determine the potential impacts to park soundscapes and other resources and values. Projects within 25 to 40 miles should be modeled and analyzed to determine potential acoustic impacts to park soundscapes and other resources and values.</p> <p>For all proposed projects within these SEZs, the following steps should be taken to better understand potential impacts on NPS acoustic environments from solar development:</p> <ul style="list-style-type: none"> • Determine natural ambient sound levels at units of the national park system using NPS methods and protocols. Contact NPS Natural Sounds and Night Skies Division to determine if data already exist. • Noise levels from the proposed development should be modeled and analyzed to determine the potential impacts to park soundscapes and other resources and values. • Mitigation measures should be developed and implemented to minimize any potential impacts <p>See additional NPS comments on the Acoustic Environment provided on the DPEIS.</p>
<p>C.2.2.1</p>	<p>C-54 Figure C.2.2-1</p>	<p>Iron Mountain should not be highlighted in dark blue since it is no longer a proposed Solar Energy zone. In addition, NPS requests the portion of Riverside East SEZ west of the Palen Mountains be excluded from the solar development due to various encroachment impacts at Joshua Tree NP.</p>
<p>C.2.2.3</p>	<p>C-55/3-4</p>	<p>The NPS continues to propose, as has been submitted previously and as supported by several reviewers, that all lands in the western portion of the Riverside East SEZ, that is west of the Palen Dry Lake ACEC, be excluded from further development in order to protect adjacent resources of Joshua Tree National Park, including viewsheds, Wilderness, night skies, soundscape, habitat connectivity, sand transport, water quantities, and visitor experiences.</p>
<p>C.2.2</p>	<p>C-55/27-28,</p>	<p>Adjust wording to reflect current reviews of groundwater use and cumulative impacts expected. Current discussions with BLM office and EPA comments indicate possible overdraft of the aquifer.</p>

ATTACHMENT 1

C.2.2.1	C-56/16	<p>Include distances between the modified SEZ boundary and that of Joshua Tree National Park and provide more discussion on the potential impacts to the park, such as increased exposure to invasive plant species due to road construction, noise and light pollution.</p>
C.2.2.3	C-58/4/5	<p>Correct sentence “Excluding this area will reduce impacts on Joshua Tree NP.” to read “Excluding a few portions of the SEZ immediately adjacent to Joshua Tree NP may reduce some impacts on the park. The proposed SEZ boundary is now two miles south of the park boundary.”</p>
C.2.2.3	C-58/13-16	<p>Table 2.2.1 identifies Areas for Exclusion, including lands categorized as VRM Class I and II. This section and the maps for Riverside East should be adjusted to reflect that areas in VRM II be identified as exclusion areas and undevelopable.</p>
Table 2.2-1; and C.2.2.4	C-59/2-16 Figure C.2.2-2	<p>Table identifies Areas for Exclusion, including lands categorized as VRM Class 1 and 2. In conflict with this information in this table, the map identifies those areas in VRM, Class 2, including lands in the western and eastern portion of the Riverside East SEZ that are currently identified as “Developable”. By the BLM’s definitions as specified in Table 2.2-1, those lands in the VRM Class II should be excluded from the Riverside East SEZ and identified as undevelopable.</p>
C.2.2.4	C-59 Figure C.2.2-2	<p>The NPS continues to recommend that all lands in the western portion of the Riverside East SEZ, west of the Palen Dry Lake ACEC, be excluded from further development in order to protect adjacent resources of Joshua Tree National Park, including viewsheds, Wilderness, nightskies, soundscape, habitat connectivity, sand transport, water quantities, and visitor experiences.</p>
C.4.1.5.8	C-154/13	<p>The Nevada State Engineer (NSE) has established in Order 1197 that the Amargosa Desert Hydrographic Basin’s groundwater is over-appropriated, and that any new application to appropriate groundwater within a 25-mile radius of Devils Hole will be denied unless it can be determined that a project requiring the changes of multiple existing water rights would produce a net impact that is the “same or less” to the base rights impact to Devils Hole. Any solar development—even PV solar—will require new groundwater withdrawals. The terms and conditions of Order 1197 requiring offsets must be applied to all solar applications within the 25-mile radius of Devils Hole. The NPS recommends including the description of current terms and conditions under Order 1197 in the Final EIS sections describing the Amargosa Valley SEZ, and an additional section noting the same terms and conditions for the variance lands in the Amargosa Desert Hydrographic Basin, including a map that delineates the basin.</p>

<p>C.4.1.5.8</p>	<p>C-154/13</p>	<p>The reconfigured Amargosa Valley SEZ, variance areas, and Devils Hole all lie within the over-appropriated Amargosa Desert Hydrographic Basin (Basin No. 230). Solar applications must demonstrate a net neutral or reduction of groundwater pumping within the Amargosa Desert. If this result cannot be demonstrated, the Nevada State Engineer would apply criteria under Order 1197. One of the ways that solar projects can avoid potential adverse effects on Devils Hole is to acquire water rights above what is necessary for their operation. These minimization water rights should be senior, i.e. they should come from the 7,000 acre feet per year available for development in Basin No. 230 as set forth in NSE Ruling 5992. These water rights need to have historical pumpage equal to the amount that the DOI Bureaus have agreed is necessary to lessen and/or avoid impacts to Devils Hole. The USGS Death Valley Regional Flow System and Southern Amargosa Embedded Models will be applied to determine the amount of the minimization water rights needed to achieve a net-neutral (at minimum) effect. Additional minimization water rights will be needed to demonstrate a reduction in potential adverse impact on Devils Hole, which will be needed to avoid a protracted approval process.</p>
<p>C.7.3</p>	<p>C-343/34through C-344/38</p>	<p>VISUAL RESOURCE DESIGN FEATURES FOR SELECT SEZs: In Table 2.2-1 on page 2-16, exclusion #16 covers the following, “Lands categorized as Visual Resource Management (VRM) Class I or II (and, in Utah, Class III).” Given this language, we are confused by the discussion on page C-343 (lines 43-45) to page C-344 (lines 1-9). This language appears to indicate that VRM Class II lands are open to solar energy development in the SEZs when the plain language in the exclusion Table indicates that Class II lands have been removed from consideration for utility-scale solar energy development. This discrepancy needs to be fixed.</p>
		<p>END OF COMMENTS ON THE SUPPLEMENT TO THE DRAFT PEIS. REFER TO ATTACHMENT 1 APPENDICES A AND B FOR ADDITIONAL INFORMATION REGARDING NPS ANALYSIS OF POTENTIAL RESOURCE CONFLICT AREAS.</p>
