Have travelled and lived in many areas. Have been a S.Calif. REALTOR in OC & San Diego for 20+ yrs. after being a Management Consultant for many years. The south part of California has and will have ebbs & flows, but still a huge demand for energy, always. Trying to get the power link, using dirty energy from Mexico is LAME. Less cost, more benefits come from 'doing it right', throughout California. Windmills WORK! Repeat the Successes of what works! DON'T repeat the Mistakes-more Polluting methods of creating energy, transporting it where 'brokers' can 'siphon' value and increase costs (ENRON)! Locally, having sold 70 acres recently here, the prospect of Placing such windturbines between mountains in SD county, ie. east of Julian, in national parkland that is Never Used, would be ideal. Knowing environmentalists and back roaders, simply showing the "Benefits to be Gained" and the "Losses to be Avoided" is a good way to show the Benefits for all involved. USE THIS PROCESS! Little seen from anywhere, they can SAVE our Environment, yet sustain our population!
