I am a strong environmentalist, but I feel it is short-sighted to halt these projects for this long so as to research water and other impacts when this planet is fast approaching a tipping point because of carbon emissions. A two-year halt to solar energy projects is too long. There should be a way to fast-track environmental impact analyses that allows start-up companies, particularly, to continue moving forward. Review priority should be given in areas where water needs and usage for these projects are most critical. A two year hiatus will threaten the survival of these companies as well as the US's capacity to begin meaningfully reducing carbon output. We're rapidly running out of time to reverse the damage to this planet caused by emissions. These projects need to move forward.
