I fully support the development of solar energy projects on the public lands of the United States, with minimal restriction to access by recreational users.

Solar power generation is a viable complimentary method of producing the power the United States needs, in conjunction with other forms of generation, including nuclear and hydroelectric, which have been shown to be viable methods as well.

As someone who utilizes solar electricity generation and storage to operate a vacation home, I know for a fact that solar works.

The United States needs energy, and we need it now. We must utilize every possible form of domestic energy production. Solar generation should be a big part of that production equation.

Thank you.

Cary Nickel
