To Whom It May Concern:

I live in Arizona and I am a desert racer. I attend several races a year in the proposed land closure area. By shutting down this land you are not only shutting thousands of ohv acres but you are shutting down a large portion of a track that more than five organizations use a year. There already have been many land closures in the area in which these panels could be placed. For example in the Laughlin area our track there is growing shorter and shorter each year due to land closures. I am all for alternative means for power, but the OHV users seem to keep getting the short end of the stick. This closure will do more than just keep the thousands of users from the land. It will severely hurt hundreds if not thousands of businesses that are already feeling the crunch of the economy. At this time I am trying to maintain my hobby even with the high price of fuel. I feel this could be the straw that breaks the camels back for many racers and potential racers who will say why bother. This will surely impact the surrounding areas that rely on the income of the racers and OHV users who patronize their businesses.
