The need for renewable energy is real. The varied proposals do not take into account the amount of collateral damage that will occur to fragile ecological systems and private property values. The governor has proclaimed California in a drought yet projects such as Ivanpah reportedly will use more than 30 million gallons of water a year to run the operation. Not enough emphasis is being placed on conservation and PV solar incentives. We urge you to consider the fallout that will be created through these large corporate projects. If we ruin what we have in an effort to save the planet. What's the point?
