Any sane and well-informed member of society knows that solar energy MUST be developed as extensively and quickly as possible. The entire world's dependence on fossil fuels must be drastically reduced as soon as humanly possible. It's not like we aren't aware of possible environmental conflicts, so it should be reasonably easy to locate solar and other alternative energy projects wisely and/or efficiently. This BS of "preserving aesthetic views" has not stopped powerline routes or highways and bridges, so why should we hamstring future generations with such inanities. I grew up in the fifties thinking solar and wind power were practical evolution of our power sources, as was hydroelectric, geothermal and nuclear power. The big energy companies can still make plenty of money by developing alternative sources; most of us don't want to be in the power business!
