This area is and has been used for off-road recreation for many decades and allows easy access and supports many races and events. There are better ways to install solar panels that don't involve closing an established OHV area. I make my living from the off-road industry so this would directly cost me and possibly cause me to go out of business then I would be forced to collect welfare from the government that forced me out of business. Quit picking on the off-road community and take your panels to an area that will not adversely affect the tax paying public and their right to recreate on public lands. I think solar energy is great idea but even better when applied to the private homeowner and not a huge company motivated by profits. Look where the gas lobby has left us! Oh but if the homeowner had affordable solar then that would upset the money hungry electricity companies. For once it would be nice to see things done for the right reason and not for paying off a congress person. Our government has totally lost the faith of the people. The system is corrupt and power corrupts absolutely.
